A number of approaches that improve mitochondrial function to produce benefits in aging mice, while comparing poorly with exercise as an intervention in humans, appear to work by improving mitophagy. That includes mitochondrially targeted antioxidants such as mitoQ, approaches to NAD+ upregulation such as nicotinamide riboside, and so forth. Mitophagy is the quality control process...

Aging is a process characterized by the progressive loss of tissue and organ function. The oxidative stress theory of aging is based on the hypothesis that age-associated functional losses are due to the accumulation of RONS-induced damages. At the same time, oxidative stress is involved in several age-related conditions (ie, cardiovascular diseases [CVDs], chronic obstructive pulmonary ...

Free Radicals and Aging . The free radical theory of aging asserts that many of the changes that occur as our bodies age are caused by free radicals. Damage to DNA, protein cross-linking and other changes have been attributed to free radicals. Over time, this damage accumulates and causes us to experience aging.

### Learn About the Free Radical Theory of Aging - Verywell Health

The mitochondrial theory of aging was first proposed in 1978, and two years later, the mitochondrial free-radical theory of aging was introduced. The theory implicates the mitochondria as the chief target of radical damage, since there is a known chemical mechanism by which mitochondria can produce ROS, mitochondrial components such as mtDNA are not as well protected as nuclear DNA, and by ...
