ATOMS: ATOMIC STRUCTURE QUESTIONS AND ANSWERS - QUESTION ONE: MODELS OF THE ATOM (2011:1) At different times scientists have proposed various descriptions or models of the atom to match experimental evidence available. (a) The model that Thomson proposed was called the plum-pudding model. Describe this model.

### ATOMS: ATOMIC STRUCTURE QUESTIONS AND ANSWERS

Although they can be broken further into subatomic particles, the three main components of an atom are protons, neutrons, and electrons. In order to be considered an atom, there needs to be at least a single proton (which is the most common form of hydrogen). 2. An element is determined by the number of:

Silicon Atom. Figure 1.0.2 Illustrates the structure of an atom of silicon, a very common element widely used in electronics. Figure 1.0.2(a) shows how the basic (simplified) structure of the atom may be imagined, with a nucleus consisting of 14 protons (shown in red) and 14 neutrons (shown in black), surrounded by 14 (blue) electrons orbiting the nucleus in a number of 'electron shells'.

Dalton's atomic theory proposed that all matter was composed of atoms, indivisible and indestructible building blocks. While all atoms of an element were identical, different elements had atoms of differing size and mass. Dalton's atomic theory also stated that all compounds were composed of combinations of these atoms in defined ratios.

The corresponding atomic properties are somewhat different, for example, the charges[8] or the radii. Bound atoms of the same element are also different because of different bonding situations. However, the difference from free atoms in vacuum is usually bigger[63] and is particularly striking in the case of the transition elements.

The main points of this model are as follows: An atom is made up of two parts, nucleus and extra nuclear part. Nucleus is the center of the atom with positive charge. Extra nuclear part means the space around the nucleus in which the electrons are distributed. The whole mass of the atom is located in the nucleus.

### Atomic Structure Chemistry Quiz - ThoughtCo

Atomic structure refers to the structure of an atom containing nucleus (at the centre) in which there are protons (positively charged) and neutrons (neutral) and electrons (negatively charged) revolving around the nucleus. One of the most important and fundamental chapters of Class 11 NCERT syllabus is Structure of an atom.
