Bone marrow actually contains 96% fat – and it’s where animals concentrate toxins. So whilst in theory bone marrow is healthy, given how polluted the world is today and the industrial scale of animal husbandry (which uses antibiotics, GMO feeds and loads of other crap), bone marrow actually contains a concentration of toxins and heavy metals. Even wild reindeer in the Arctic were found to ...

Platelets are much smaller than red or white blood cells. They perform a critical role in the clotting process to repair damaged blood vessels. Thus, injuries often prompt a large increase in number of platelets. Some autoimmune diseases, blood clotting disorders, and bone marrow problems cause a decrease in the number of platelets.

Canine parvovirus (CPV) is a highly contagious and relatively common cause of acute, infectious GI illness in young and/or unvaccinated dogs. Although its exact origin is unknown, it is believed to have arisen from feline panleukopenia virus. It is a nonenveloped, single-stranded DNA virus, resistant to many common detergents and disinfectants, as well as to changes in temperature and pH.

Pathology. The pathogenesis of a Charcot joint is thought to be an inflammatory response from a minor injury that results in osteolysis. In the setting of peripheral neuropathy, both the initial insult and inflammatory response is not well appreciated, allowing ongoing inflammation and injury 10.. Charcot joints are typically unilateral but are bilateral in ~20% (range 5.9-39.3%) of cases 10.

immune system, the complex group of defense responses found in humans and other advanced vertebrates that helps repel disease-causing organisms (pathogens). Immunity from disease is actually conferred by two cooperative defense systems, called nonspecific, innate immunity and specific, acquired immunity. Nonspecific protective mechanisms repel all microorganisms equally, while the specific ...
