Casella and Berger was used as the first year text for my stats graduate program. It provides a comprehensive introduction to probability theory (without a measure theoretic approach) along with hypothesis testing. It also provides both a frequentist and Bayesian perspective, though the focus is skewed towards the former. While not entirely ...

Bayesian inference is a method of statistical inference in which Bayes' theorem is used to update the probability for a hypothesis as more evidence or information becomes available. Bayesian inference is an important technique in statistics, and especially in mathematical statistics. Bayesian updating is particularly important in the dynamic analysis of a sequence of data.

It is an introduction to statistical thinking/reasoning, data management, statistical analysis, and statistical computation. Concepts in this course will be developed in greater mathematical rigor later in the statistical curriculum, including in STAT 515, 516, 525, and 535. It is intended to be the first course in statistics taken by math majors interested in statistics. Concepts covered ...

the solutions as \hat{E} that will minimize the sum of the squared vertical distances from all points to the line: $\sum_{i=1}^n (y_i - \hat{E}x_i)^2$ The solutions are found by solving the equations: $\sum_{i=1}^n (y_i - \hat{E}x_i) = 0$ and $\sum_{i=1}^n x_i(y_i - \hat{E}x_i) = 0$ The equation of the fitted least squares regression line is $\hat{Y} = \hat{E}x$ (or in terms of each point: $\hat{Y}_i = \hat{E}x_i$) ----- For simplicity of notations ...

"When a sample exhausts the population, the corresponding variable is fixed; when the sample is a small (i.e., negligible) part of the population the corresponding variable is random" [Green and Tukey (1960)]. 4. "If an effect is assumed to be a realized value of a random variable, it is called a ...

5.1 Gaussian process prior. Gaussian process is a generic term that pops up, taking on disparate but quite specific meanings, in various statistical and probabilistic modeling enterprises. As a generic term, all it means is that any finite collection of realizations (i.e., $\{(n)\}$ observations) is modeled as having a multivariate normal (MVN) distribution.
