The data we'll use comes from Table 11.2 of Agresti (2002) and concerns a longitudinal study comparing two drugs ("new" versus "standard") for treating depression. Below we read in the data from a CSV file, set "standard" as the reference level for the drug variable, and look at the first three rows. We see subject 1 (id = 1) had a "mild" diagnosis and was treated with the ...

Getting Started with Generalized Estimating Equations

Regression analysis on predicted outcomes that are binary variables is known as binary regression; when binary data is converted to count data and modeled as i.i.d. variables (so they have a binomial distribution), binomial regression can be used. The most common regression methods for binary data are logistic regression, probit regression, or related types of binary choice models.

Statistics is the discipline that concerns the collection, organization, analysis, interpretation, and presentation of data. In applying statistics to a scientific, industrial, or social problem, it is conventional to begin with a statistical population or a statistical model to be studied. Populations can be diverse groups of people or objects such as "all people living in a country" or ...
