Cancer is a group of diseases involving abnormal cell growth with the potential to invade or spread to other parts of the body. These contrast with benign tumors, which do not spread. Possible signs and symptoms include a lump, abnormal bleeding, prolonged cough, unexplained weight loss, and a change in bowel movements. While these symptoms may indicate cancer, they can also have other causes.

Cancer - Wikipedia

SC.912.L.14.1 Describe the scientific theory of cells (cell theory) and relate the history of its discovery to the processes of science : SC.9.12.L.14.3 Compare and contrast the general structure of plant and animal cells. The acrosome is a structure that forms a cap over most of the nucleus of the sperm cell. The main job of the acrosome is to penetrate the outer layers of the ovum so that the sperm can get inside ...

Spermatogenesis: How the Reproductive System Produces Sperm

The Placozoa / p l æ k ə ' z ə / are a basal form of marine free-living (non-parasitic) multicellular organism. They are the simplest in structure of all animals. Three genera have been found: the classical Trichoplax adhaerens, Hoilungia hongkongensis, and Polyplacotoma mediterranea, where the last appears most basal. The last two have been found only since 2017.
