Chapter 2- Minerals and Rocks GEOL 221 at Ferris State ...

In most geological materials, these combine in various ways to make minerals. Minerals will be covered in some detail in Chapter 2, but here we will briefly touch on what minerals are, and how they are related to rocks. A mineral is a naturally occurring combination of specific elements that are arranged in a particular repeating three-dimensional structure or lattice. [1] The mineral halite is shown as an example in Figure 1.4.1.

1.4 Minerals and Rocks - Physical Geology - 2nd Edition

Chapter 2 Rocks and Minerals Mineral • Naturally occurring • Inorganic • Crystalline solid • Composed of one or more chemical elements Silicate minerals are building blocks of crustal rocks Most abundant elements in Earth's crust • Oxygen • Silicon Common rock forming minerals
