Common Measurement Conversions for Chemistry - dummies

Many calculations that you make in chemistry will involve unit conversions (for example, between meters and millimeters, or between meters and inches). Fortunately, you don't need to know all possible unit conversions. Instead of memorizing or looking up conversion factors between all types of units, you can memorize just a handful of conversion factors and use them one after another, letting the units guide you each step of the way.

The conversion of height from feet to meters is a two-step process. First, convert the number of feet to meters, and then convert the number of inches to meters. Converting feet to meters, we get $5 \text{ ft} \times 0.305 = 1.53 \text{ meters}$ Now, converting the inches to centimetres, we get $3 \text{ inches} \times 2.54 = 7.62 \text{ cm} = 0.0762 \text{ meters}$ Adding these two together, we get
