Conceptual Architecture

Conceptual architecture is a form of architecture that utilizes conceptualism, characterized by an introduction of ideas or concepts from outside of architecture often as a means of expanding the discipline of architecture. This produces an essentially different kind of building than one produced by the widely held 'architect as a master-builder' model, in which craft and construction are the guiding principles.

Creating and developing architectural concepts is something a lot of students and indeed many architects struggle with. This may be due to project pressures, writers block, limited inspiration, or just the fact that for many students their architecture schools particularly in the first couple of years, don't teach and stress the importance of them. As we discuss here in " How to develop an architecture concept ", the best conceptual approaches should always aim to provide the backbone ...
