As already stated in Section 1 constraints consist simply of any formula of \mathcal{L}_T , the first order theory of rational trees as axiomatised by Maher. Although such formulae are well understood, they are, due to the presence of quantifiers, unsuitable for computational purposes.

To generalize this idea,
two constraints on an

conservativeness is

similar except for

applying only when R is

consistent.

Theory of computation - Wikipedia

In computational complexity theory, the constraint logic problem is a problem in constraint graph, a special graph with weighted edges that satisfy special constraints (see below). This problem and its variants have been proven to be PSPACE-Complete and
