Below, you can see that the gaps have appeared around the images: 6. Align the Images. The flexbox layout module allows us to align flex items in a couple of different ways, using the justify-content CSS property. Its default value is flex-start that lays out flex items from the beginning to the end of the row. This is what you could see in the above example.

### How to Create a Responsive Image Gallery with Flexbox

It is called responsive web design when you use CSS and HTML to resize, hide, shrink, enlarge, or move the content to make it look good on any screen. Don't worry if you don't understand the

example below, we will break down the code, step-by-step, in the next chapters:

## **Responsive Web Design Introduction - W3Schools**

An area of a document laid out using flexbox is called a flex container. To create a flex container, we set the value of the area's container's display property to flex or inline-flex. As soon as we do this the direct children of that container become flex items. As with all properties in CSS, some initial values are defined, so when creating a flex container all of the contained flex items will ...

Alternative text. So far, I've been working with the assumption that the card's image is decorative and doesn't need alternative text, hence alt="". If this empty alt was omitted, screen readers would identify the image and read (part of) the src attribute as a fallback, which is not what anyone wants here.. If the image were considered pertinent in terms of content (for example, the appearance ...
