they may be passed through a crusher or chip breaker to form shorter lengths. Both forms of turnings are shipped and shipments are frequently a mixture of short and long chips. The density of the short chips is of the order of 60 pounds per cubic foot, twice the density of the longer chips as they tend to compact more readily.

A mass balance, also called a material balance, is an application of conservation of mass to the analysis of physical systems. By accounting for material entering and leaving a system, mass flows can be identified which might have been unknown, or difficult to measure without this technique. The exact conservation law used in the analysis of the system depends on the context of the problem ...

The United States is known to have possessed three types of weapons of mass destruction: nuclear weapons, chemical weapons, and biological weapons. The U.S. is the only country to have used nuclear weapons in combat, when it detonated two atomic bombs over the Japanese cities of Hiroshima and Nagasaki during World War II. It had secretly developed the earliest form of the atomic weapon during ...

Electrochemical experiments can be conducted under diffusion-controlled mass transport by using microelectrodes to yield a true steady-state diffusion-controlled current before the onset of natural convection. In chronoamperometry, the current-time behavior of an electrochemical system after a potential step in a still solution can be observed. For spherical electrodes, the current transient ...
