Nude bodies painted white, faces turned away from the viewer: this is how Nadav Kander (*1961 in Israel) photographed the sitters in his latest series. Accessories are minimal, as is the aesthetic, yet at the same time the arrangement makes the mostly voluptuous bodies seem Baroque. One is reminded of the portraits of Elizabeth I with their white lead "masks." In Kander's precisely lit images, with their exquisite colors, white mice run across white skin, a small bird seems tiny perched next to an odalisque. Red hair plays a role, flowing down over doll-like bodies as if it had a life of its own. Despite the abundance of flesh on display, the images do not have a superficial sense of the erotic. The lack of eye contact and the white makeup function as barriers, and the massiveness of the limbs recalls the works of Hans Bellmer or Lucian Freud. The Statesman is Plato's neglected political work, but it is crucial for an understanding of the development of his political thinking. In some respects it continues themes from the Republic, particularly the importance of knowledge as entitlement to rule. But there are also changes: Plato has dropped the ambitious metaphysical synthesis of the Republic, changed his view of the moral psychology of the citizen, and revised his position on the role of law and institutions. In its presentation of the statesman's expertise, the Statesman modifies, as well as defending in original ways, this central theme of the Republic. This new translation is based on the revised Oxford Text of Plato and makes accessible the dialogue to students of political thought in clear and contemporary language. The introduction sets the argument in the context of the development of Plato's thought, and outlines the philosophical and historical background necessary for a full understanding of the text, particularly for a political theory readership. When first published, Marshall McLuhan's *Understanding Media* made history with its radical view of the effects of electronic communications upon man and life in the twentieth century.

This volume tackles both the apparent lack of unity and the perplexing philosophical content of the *Statesman* as it explores, in what is now Plato's second account, subsequent to that of the *Republic*, of what would constitute the best society, the role and nature of the statesman in it; the art of governance of it; the role and nature of its laws; the role and status of its female citizens; and how the virtues are interwoven within it, along with many other topics, including (in a major Myth) that of the origins of the universe and of humankind. Coming as they do from often widely differing hermeneutical traditions, the authors in the volume offer responses to substantive and intriguing questions that the dialogue raises which are frequently divergent, but by that very token of much value in any attempt to interpret a complex and multifaceted work.

Based on the teachings of the Buddha, this book offers the most compelling and impassioned indictment of meat-eating to be found in Tibetan literature and is pertinent to anyone interested in vegetarianism as a moral or spiritual issue. The Buddha's teachings show how destructive habits can be examined and transformed gradually from within. The aim is not to repress one's desire for meat and animal products by force of will, but to develop heartfelt compassion and sensitivity to the suffering of animals, so that the desire to exploit and feed on them naturally dissolves. There are two texts presented here. One is an excerpt from Shabkar's *Book of Marvels*, consisting of quotations from the Buddhist scriptures and the teachings of masters of Tibetan Buddhism that argue against the consumption of meat, with Shabkar's commentary. The second, the *Nectar of Immortality*, is Shabkar's discourse on the importance of developing compassion for animals.

From the smallest gnat to the largest aircraft, all things that fly obey the same aerodynamic principles. *The Simple Science of Flight* offers a leisurely introduction to the mechanics of flight and, beyond that, to the scientific attitude that finds wonder in simple calculations, forging connections between, say, the energy efficiency of a peanut butter sandwich that fuels your body and that of the kerosene that fuels a jumbo jet. It is the product of a lifetime of watching and investigating the way flight happens. He covers paper airplanes, kites, gliders, and human-powered flying machines as well as birds and insects, explaining difficult concepts like lift, drag, wing loading, and cruising speed through many fascinating comparisons, anecdotes, and examples. Equations, often the best shorthand to explain and connect phenomena, are integrated seamlessly into the flow of the text in such a way that even math-phobic readers should not be put off. Tennekes begins with a simple comparison of the relative fuel consumption of hummingbirds, cars, and airplanes, then turns to the relations between an airplane's weight, its wing area, and its cruising speed. After showing that it is possible to collect data on all flying creatures and flying machines in a single "Great Flight Diagram", he looks at energetics through the considerable efforts of a little 35-gram bird in a wind tunnel. There are stories on the effects of headwinds, tailwinds, and weather conditions on both birds and planes, on the elegance of the mechanics that makes flight possible, and on the aerodynamics of sophisticated flying toys.

A new paperback edition of the first book by the bestselling author of *A History of the World in 6 Glasses*-the fascinating story of the telegraph, the world's first "Internet," which revolutionized the nineteenth century even more than the Internet has the twentieth and twenty first.

What John McPhee's books all have in common is that they are about real people in real places. Here, at his adventurous best, he is out and about with people who work in freight transportation. Over the past eight years, John McPhee has spent considerable time in the company of people who work in freight transportation. *Uncommon Carriers* is his sketchbook of them and of his journeys with them. He rides from Atlanta to Tacoma alongside Don Ainsworth, owner and operator of a sixty-five-foot, eighteen-wheel chemical tanker carrying hazmats. McPhee attends ship-handling school on a pond in the foothills of the French Alps, where, for a tuition of \$15,000 a week, skippers of the largest ocean ships refine their capabilities in twenty-foot scale models. He goes up the "tight-assed" Illinois River on a "towboat" pushing a triple string of barges, the overall vessel being "a good deal longer than the Titanic." And he travels by canoe up the canal-and-lock commercial waterways traveled by Henry David Thoreau and his brother, John, in a homemade skiff in 1839. *Uncommon Carriers* is classic work by McPhee, in prose distinguished, as always, by its author's warm humor, keen insight, and rich sense of human character.
