Sometimes heroes fall and take their loved ones down with them. Colonel Michael Cedars and reporter Hope Shane fell in love in a war zone, but then the world blew up and splintered their lives in two. Coming home again isn't always easy. A Marine accustomed to giving orders, Michael struggles to find his role in civilian life. Wounded, he faces new battles as he learns to walk again, struggles with wartime ghosts, and questions his abilities as a husband. Hope doesn't give up—not on the man she loves and not on her pursuit of justice. An investigative reporter, she's hot on the trail of a human trafficking ring. Danger intensifies as she gets closer to the truth, but the human traffickers know her weakness. Will Michael become her Achilles Heel? Is he still the hero she married or has he become a liability that could get them both killed?

"At the very time the need for effective leadership is reaching critical proportions, Michael Fullan's *Leading in a Culture of Change* provides powerful insights for moving forward. We look forward to sharing it with our grantees." --Tom Vander Ark, executive director, Education, Bill and Melinda Gates Foundation "Fullan articulates clearly the core values and practices of leadership required at all levels of the organization. Using specific examples, he convinces us that the key change principles are equally critical for leadership in business and education organizations." --John Evans, chairman, Torstar Corporation "In *Leading in a Culture of Change*, Michael Fullan deftly combines his expertise in school reform with the latest insights in organizational change and leadership. The result is a compelling and insightful exposition on how leaders in any setting can bring about lasting, positive, systemic change in their organizations." --John Alexander, president, Center for Creative Leadership "Michael Fullan's work is remarkable. He masterfully captures how leaders can significantly improve their learning and performance, even in the uncontrollable, chaotic circumstances in which they practice. A tour de force." --Anthony Alvarado, chancellor of instruction, San Diego City Schools "Too often schools and businesses are seen as separate and foreign places. Michael Fullan blends the best of knowledge from each into an exemplary template for improving leadership in both." --Terrence E. Deal, coauthor of *Leading with Soul* Business, nonprofit, and public sector leaders are facing new and daunting challenges--rapid-paced developments in technology, sudden shifts in the marketplace, and crisis and contention in the public arena. If they are to survive in this chaotic environment, leaders must develop the skills they need to lead effectively no matter how fast the world around them is changing. *Leading in a Culture of Change* offers new and seasoned leaders' insights into the dynamics of change and presents a unique and imaginative approach for navigating the intricacies of the change process. Michael Fullan--an internationally acclaimed expert in organizational change--shows how leaders in all types of organizations can accomplish their goals and become exceptional leaders. He draws on the most current ideas and theories on the topic of effective leadership, incorporates case examples of large scale transformation, and reveals a remarkable convergence of powerful themes or, as he calls them, the five core competencies. By integrating the five core competencies--attending to a broader moral purpose, keeping on top of the change process, cultivating relationships, sharing knowledge, and setting a vision and context for creating coherence in organizations--leaders will be empowered to deal with complex change. They will be transformed into exceptional leaders who consistently mobilize their compatriots to do important and difficult work under conditions of constant change.

Maritime Supply Chains breaks the maritime chain into components, consistently relating them to the overall integrated supply chain. The book not only analyzes and provides solutions to frequently encountered problems and key operational issues, it also applies cutting-edge scientific techniques on the maritime supply chain. Sections consider shipping, ports and terminals, hinterland and the issues that intersect different parts of the chain. Readers will find discussions of the various actors at play and how they relate to the overall function of the supply chain. Finally, the book offers solutions to the most pressing problems, thus providing a unique, well-balanced account.

How to use design as a tool to create not only things but ideas, to speculate about possible futures. Today designers often focus on making technology easy to use, sexy, and consumable. In *Speculative Everything*, Anthony Dunne and Fiona Raby propose a kind of design that is used as a tool to create not only things but ideas. For them, design is a means of speculating about how things could be—to imagine possible futures. This is not the usual sort of predicting or forecasting, spotting trends and extrapolating; these kinds of predictions have been proven wrong, again and again. Instead, Dunne and Raby pose “what if” questions that are intended to open debate and discussion about the kind of future people want (and do not want). *Speculative Everything* offers a tour through an emerging cultural landscape of design ideas, ideals, and approaches. Dunne and Raby cite examples from their own design and teaching and from other projects from fine art, design, architecture, cinema, and photography. They also draw on futurology, political theory, the philosophy of technology, and literary fiction. They show us, for example, ideas for a solar kitchen restaurant; a flypaper robotic clock; a menstruation

machine; a cloud-seeding truck; a phantom-limb sensation recorder; and devices for food foraging that use the tools of synthetic biology. Dunne and Raby contend that if we speculate more—about everything—reality will become more malleable. The ideas freed by speculative design increase the odds of achieving desirable futures.

The area of Virtual Organizations as a main component of the new discipline of Collaborative Networks has been the focus of research globally. The fast evolution of the information and communication technologies and in particular the so-called Internet technologies, also represents an important motivator for the emergence of new forms of collaboration. However, the research in many of these cases is highly fragmented, considering that each project is focused on solving specific problems. As such, there is no effective consolidation/harmonization among them in order to have an effective impact and facilitate the interaction among the involved experts. This book represents a contribution to the consolidation of the already vast amount of empirical knowledge and practical experience. A synthesis of results collected from the analysis of numerous projects and industry case studies is presented, with focus on: Principles and models, ICT infrastructures and tools, Implementation issues, and Case studies.

This Book Is For Student Preparing For The Reading Test In The Academic Module Of The International English Language Testing System (Ielts), Which Is Administered By The British Council, The University Of Cambridge Local Examination Syndicate (Ucles) And Ielts Australia. The Book Contains Ten Practice Reading Tests And A Key. Each Test Contains Three Reading Passages, Which Cover A Variety Of Topics And Give Lots Of Practice For The Range Of Question Types Used In The Ielts Exam. All The Articles In This Publication Expect For Two Were Specially Commissioned. All Book May Be Used As A Supplement To A Book For Ielts By Mccarter, Easton Ash, As A Supplement To A Course Book Or For Self- Study. This Special Low- Priced Edition Is For Sale In India, Bangladesh, Bhutan, Maldives, Nepal, Myanmar, Pakistan And Sri Lanka Only.

The book is a conference proceeding on adoption and application of sustainable, Manageable, Appropriate, Rational and Transferable (SMART) Technologies in all sectors of development. This is a self-study publication with two CD ROMs for students preparing for the Academic Module of the International English Language Test System (IELTS) which is administered by the British Council, the University of Cambridge Local Examinations Syndicate (UCLES) and by IELTS Australia. The book covers the four sections of the IELTS exam: listening, reading, writing and speaking. Special features of the book are: the reading exercises, the detailed Keys for these exercises, the wide range of exercises to help you prepare for Writing Task 1, and the detailed Key for the Reading Tests. The third edition incorporates additional material to cover changes made to the Speaking module of the IELTS examination. The publication may also be used as a course book, or as a supplement to a course book. Also includes changes to IELTS writing rubrics.

Our experts have created Mathematics: 15 Years Solved Papers for JEE Main and Advanced keeping in mind a distinct pattern emerging 2000 onwards and have covered all previous years' questions from 2004. We have chosen solved questions from the year 2004 in order to apprise students of at least two years' of 'subjective type' (numerical value) questions asked in the IIT entrance exam.

Environmental professionals can no longer simply publish research in technical journals. Informing the public is now a critical part of the job. Environmental Communication demonstrates, step by step, how it's done, and is an essential guide for communicating complex information to groups not familiar with scientific material. It addresses the entire communications process, from message planning, audience analysis and media relations to public speaking - skills a good communicator must master for effective public dialogue. Environmental Communication provides all the knowledge and tools you need to reach your target audience in a persuasive and highly professional manner. "This book will certainly help produce the skills for environmental communications sorely needed for industry, government and non-profit groups as well as an informed public". Sol P. Baltimore, Director, Environmental Communications and Adjunct faculty, Hazardous Waste management program, Department of Chemical Engineering, College of Engineering, Wayne State University, Detroit, Michigan. "All environmental education professionals agree that the practice of good communications is essential for the success of any program. This book provides practical skills for this concern". Ju Chou, Associate Professor, Graduate Institute of Environmental Education National Taiwan Normal University Taipei, Taiwan

Fuzzy logic is widely used in machine control. The term 'fuzzy' refers to the fact that the logic involved can deal with concepts that cannot be expressed as either 'true' or 'false', but rather as 'partially true'. Fuzzy set theory is very suitable for modeling the uncertain duration in process simulation, as well as defining the fuzzy goals and fuzzy constraints of decision-making. It has many applications in industry, engineering and social sciences. This book presents the proceedings of the 2015 International Conference on Fuzzy Systems and Data Mining (FSDM2015), held in Shanghai, China, in December 2015. The application domain covers geography, biology, economics, medicine, the energy industry, social science, logistics, transport, industrial and production engineering, and computer science. The papers presented at the conference focus on topics such as system diagnosis, rule induction, process simulation/control, and decision-making. They include papers on solving practical problems with intelligent algorithms; statistical analysis; classification and clustering; and association rule learning. They also reflect the frontier in data mining research and address the challenges posed to data analytics research by the increasingly large datasets yielded by many application domains, together with new types of unstructured data. The book provides an overview of the ways in which fuzzy theory and data mining principles are applied in various fields, and will be of interest to all those who work in either the theory or practice of fuzzy systems and data mining.
