

A Laboratory Guide For Elementary Geometry Using Geogebra

Excerpt from A Laboratory Guide for the Dissection of the Cat This outline has been prepared to supply a convenient laboratory guide for elementary classes in anatomy. It is intended to serve merely as an introduction to anatomical methods and terminology. In its preparation we have been assisted by the suggestions of Dr. H. C. Bumpus, Professor of Comparative Anatomy in Brown University, whose advice we gratefully acknowledge. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

This is a reproduction of a book published before 1923. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. We appreciate your understanding of the imperfections in the preservation process, and hope you enjoy this valuable book.

Excerpt from A Laboratory Guide in Elementary Bacteriology The call for a second edition within a year seems to indicate that this Guide fills a need. The author has taken the opportunity to make changes which, he believes, will increase the usefulness of the book. The principal change has come in the new form which will certainly be found more convenient. The sequence of the exercises in Chap. I. has been somewhat changed and a few new subjects have been introduced. The order in which the various bacteria is taken up has been altered so that they are now to be studied in groups. This arrangement is in keeping with recent tendencies, and it is hoped that it will impress the student with the similarity between closely related forms, and also emphasize certain minute but important differences. The addition of a number of new cuts will tend to greater clearness. The general plan of the book remains the same. Valuable suggestions have been received from several investigators and teachers. Especial mention is due Mr. John F. Nicholson, Assistant Bacteriologist to the Wisconsin Experiment Station, for valuable assistance. Suggestion or criticisms will be gladly received. Unlike some other reproductions of classic texts (1) We have not used OCR (Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

Excerpt from Animal Structures: A Laboratory Guide in the Teaching of Elementary Zoology The present book is intended to cover the laboratory work in a course in zoology for beginners. In addition a more general idea of animals should be gained from lectures, from the study of some text-book of zoology, and, above all, from the observation and collection of animals in the fields and

streams. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Excerpt from A Laboratory Guide in Elementary Zoology This is a marine form found abundantly along the New England shores fastened to seaweed, submerged wood, etc., just below low tide mark. Note the difference in size of the specimens submitted for Examination. Study them with the hand lens. Note the cylindrical sponge body. Do the two ends differ? Note the opening at one end, the osculum. Press the sponge lightly. Notice the flexibility of the wall. Note the buds on the larger specimens. Do the buds have oscula? Carefully cut a sponge from the osculum to the base. Lay the cut specimen open in water with the cloacal surface up. Does this chamber communicate with that of the buds?
