cause. How to ask the right questions--"smoke out" the issues and get to the bottom of what's causing the problem. You'll find that you and your organization are on the road to making the best choices once you've addressed the right issues.

Option analysis. How to evaluate your options once you determine what you want to achieve, preserve, and avoid by your decision. Risk analysis. How to understand both the up-side and down-side of any decision you make: anticipate before you act what can go wrong, where it can go wrong, and when it can go wrong. The result is a complete "think to win" program. John Arnold shows the importance of developing a complete thought process which will help you and your organization think more clearly and turn problems into opportunities. And, given the increasing pace of international competition, that's an edge we all need, from the largest multinational corporation to the entrepreneurial lone-wolf. Based on an intriguing national and international array of company incidents and client applications, The Complete Problem Solver also helps you sell your decisions to others. It shows how to defend your decisions with logic and phrase them in terms meaningful to those who have to "buy into" your choices and turn them into reality, both in North America and globally.

throughout each chapter, allowing students to build on emerging accounting knowledge. Concepts are further reinforced through applicable connections to more detailed business processes. Students are immersed in the "why" as well as the "how" aspects of accounting in order to reinforce concepts and promote comprehension over rote memorization. With this fourth edition, accountants will acquire a practical set of tools and the confidence they need to use them effectively in making business decisions. It better reflects a more conceptual and decision-making approach to the material. The authors follow a "macro- to micro-" strategy by starting with a discussion of real financial statements first, rather than starting with the Accounting Cycle. The objective is to establish how a financial statement communicates the financing, investing, and operating activities of a business to users of accounting information. This motivates accountants by grounding the discussion in the real world, showing them the relevance of the topics covered to their careers. This technical note and manual (TNM) addresses the following main issues:

- Discusses stakeholder needs in a typical public financial management framework that need to be reflected in a chart of accounts
- Discusses the role of chart of accounts in budgetary and financial accounting
