This groundbreaking core text fills a void in nursing literature by integrating psychotherapy, psychopharmacology, and complementary and alternative medicine (CAM) approaches into advanced practice nursing. It is organized around psychiatric "syndromes" rather than DSM diagnoses, so it will remain current even after the publication of the DSM-5. The book provides clear and relevant treatment options in the form of decision trees with additional explanatory narratives. These decision trees enable practitioners to distinguish inormal patients from those who require more customized therapeutic interventions. This holistic text integrates neurobiology, theory, and research evidence related to psychotherapy, psychopharmacology, and complementary and alternative medicine interventions. While providing comprehensive information on theory and practice, it simplifies complex aspects of treatment with clarity and provides the depth of content appropriate to support sound clinical reasoning required in advanced practice. The book responds to the current backlash against overmedication in psychiatry. It also fulfills the upcoming requirements by APNA and ISPN that advanced practice psychiatric nurses must have skills in psychotherapy. Additionally, the text focuses on treatment issues across the life span and highlights pertinent clinical differences from the adult population through pediatric pointers and aging alerts. Advanced Practice Psychiatric Nursing reflects the extensive practice and educational experience of editors and contributors from the United States, Canada, and Scotland, all of whom are expert APNs. Key Features: Organized around psychiatric syndromes, rather than DSM diagnoses, so it will remain relevant after the DSM-5 is published Integrates neurobiology, theory, and research evidence related to psychotherapy, psychopharmacology, and CAM therapies Provides the much-needed content on psychotherapy newly required for all psychiatric advanced practice nurses (APNA & ISPN White Papers) Supports clinical decision skills through thoughtfully designed, easy-to-follow decision trees ICONS highlight life span clinical management differences through Pediatric Pointers and Aging Alerts

As an increasing number of children and adolescents with psychiatric symptoms go unrecognized in our current health care system, the ability to identify and treat these issues in multiple health care settings has become vitally important. With access to primary care providers increasing and a shortage of child psychiatric providers, collaboration between psychiatric, pediatric and family advanced practice nurses is essential to improving care for this vulnerable population. "Child and Adolescent Behavioral Health: A Resource for Advanced Practice Psychiatric and Primary Care Practitioners" "in Nursing" provides a practical reference to aid in this endeavor. Aimed at advanced practice nurses and graduate students in nursing, this book is divided into 4 sections addressing assessment, treatment, special populations, and special issues. Within these sections, each chapter includes state-of-the-art, evidence-based information about the most common issues faced by psychiatric and primary care practitioners alike. Chapters focused on disorders review clinical manifestation, etiology, nursing interventions, integration with primary care, and implications for practice, research, and education. Chapters focused on issues describe the linkages between the behavioral/psychiatric profile of the child and associated risk and management strategies. Written/reviewed by over 70 nurse experts, "Child and Adolescent Behavioral Health: A Resource for Advanced Practice Psychiatric and Primary Care Practitioners" "in Nursing" is a must-have reference for all practitioners caring for children and adolescents. Key features: Speaks specifically to issues faced by advanced practice nurses Describes the etiology of psychiatric and psychosocial behaviors in children and adolescents Integrates psychiatric and primary care management strategies Comprehensive in scope, including special topics such as legal and ethical issues and cultural considerations

Prepared under the auspices of the International Council of Nurses (ICN), this first volume provides a comprehensive overview of the rapidly emerging field of advanced nursing practice. It addresses central issues in the role and practice development that are fundamental to defining and differentiating the nature of this field. Topics include defining the role, role characteristics, scope of practice, education, regulation and research. Obstacles to and facilitators of that role are addressed and include ethical questions arising in the context of practice development. With an international focus, this volume examines international developments in the field, as reflected in country-specific case studies and examples. It offers a valuable resource for advanced practice nurses, educators and administrators at healthcare institutions.

Presents key concepts in population health with a focus on advanced practice Comprehensive chapters dedicated to essential topics such as obesity and substance use disorders Provides theoretical foundation for transitioning from episodic health to population health principles Includes contributions from topic experts in a variety of settings Theory and concepts support the patient and client as well as the learner Real-world case studies provide class discussion points and support learner-centered activities such as the flipped classroom. Dedicated section provides techniques to address compassion fatigue, coaching, and social marketing Toolkit and Resources provided for each chapter including websites, assignments, and discussion questions Includes chapter dedicated to the role of the executive nurse in population health The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

This text encapsulates not only the origins of nursing in the learning disability field but also contemporary perspectives and areas for specialist nursing practice. The book is divided into four sections: origins, perspectives, practice, and further perspectives. Section one (origins) describes Great Barr Colony and explores the conceptions of practice of actual attendants and nurses who worked there. It gives readers an in-depth focus on aspects of work and practice not accounted for in the literature to date. Section two (perspectives) explores social policy perspectives from the past eras of the workhouse, the colony and the hospital, through to the present age of citizenship. Research in learning disability nursing practice is identified through scoping exercises to identify its current status. The section questions the research and practice developments that have come of age and that constitute a challenge within an evidence-based health and social care world. Section three (practice) identifies a wide range of specialist areas of nursing practice, including community learning disability nursing, epilepsy, forensics, health facilitation, autism, mental health, challenging behaviour, children's services and working with people with profound and multiple learning disabilities. Section four (further perspectives) addresses areas of contemporary and future concern, namely, educational curricula for nurses and the importance of inter-professional education and practice development.
