Here's the essential information you need to know in critical care nursing — all in one concise text! Using a to-the-point, reader-friendly approach, *Introduction to Critical Care Nursing, 5th Edition*, provides authoritative, real-world information on the important concepts of critical care nursing and the assessment and technical skills associated with the management of critically ill patients. The latest content on the technology makes it easy to learn and understand how to use the equipment you'll use in the field. Nursing care chapters are organized according to the nursing process framework, and you'll find detailed nursing care plans in every management chapter. Case studies and critical thinking questions challenge you to apply what you've learned, and user-friendly features throughout the text (updated pharmacology tables, clinical and laboratory alerts, and evidence-based practice boxes) help you bridge the gap between concepts and clinical practice. Nursing Care Plans provide nursing diagnoses, expected patient outcomes, and interventions with rationales to prepare you for clinical practice. Case Studies challenge you to apply concepts from the book to real-life patient situations to test their critical thinking skills. Streamlined and updated Pharmacology Tables detail the actions, indications, dosages and routes, and side effects of commonly used critical care drugs. Clinical Alerts promote optimal patient safety and outcomes by highlighting potential problems and concerns in the clinical setting. Laboratory Alerts discuss both common and cutting-edge tests and procedures, emphasizing the importance of laboratory test results to critical nursing care. Critical Thinking Questions in every chapter encourage you to use and reinforce the concepts presented throughout the chapter. Now full-color throughout, new, vibrant artwork and anatomical images are in true-to-life color. A new chapter on end-of-life care covers ethical and legal matters, palliative care, withholding of therapies, and communication issues — all essential concerns confronting today's critical care nurse. New features on evidence-based practice, genetics, transplantation, and geriatric considerations offer realistic, easy-to-understand information on some of the most important and rapidly changing topics in critical care today.

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.
