This book provides a Management Science approach to quality management in food production. Aspects of food quality, product conformance and reliability/food safety are examined, starting with wheat and ending with its value chain transformation into bread. Protein qualities that influence glycemic index levels in bread are used to compare the value chains of France and the US. With Kaizen models the book shows how changes in these characteristics are the result of management decisions made by the wheat growers in response to government policy and industry strategy. Lately, it provides step-by-step instructions on how to apply kaizen methodology and Deming's work on quality improvement to make the HACCPs (Hazard Analysis and Critical Control Points) in food safety systems more robust.

While this task is important for everybody, Dominique says, "There is an urgency for women. When you have inherited a construct that names, describes, and practices an ideology that women are somehow less important, less necessary, then the work of defining yourself carries with it a kind of fury." Every woman is composed of many selves—archetypal players of the psyche who contribute their voices to her greater "I." This Is Woman's Work introduces us to our council of inner women, delving into the secret wisdom and gifts of the Willing Woman, the Rebel, the Shapeshifter, the Warrior, and more. Combining writing

exercises with fresh and dynamic insights, Dominique helps us make an intimate connection with each inner woman—known and unknown, loved and feared—so we may integrate their voices, realize their wisdom, and open ourselves to our full expression and power.
