The Routledge Companion to World Cinema explores and examines a global range of films and filmmakers, their movements and audiences, comparing their cultural, technological and political dynamics, identifying the impulses that constantly reshape the form and function of the cinemas of the world. Each of the forty chapters provides a survey of a topic, explaining why the issue or area is important, and critically discussing the leading views in the area. Designed as a dynamic forum for forty-three world-leading scholars, this companion contains significant expertise and insight and is dedicated to challenging complacent views of hegemonic film cultures and replacing outmoded ideas about production, distribution and reception. It offers both a survey and an investigation into the condition and activity of contemporary filmmaking worldwide, often challenging long-standing categories and weighted—often politically motivated—value judgements, thereby grounding and aligning the reader in an activity of remapping which is designed to prompt rethinking.

With enlightening examples and illustrations drawn from counseling literature, RESEARCH DESIGN IN COUNSELING, 4th Edition facilitates a conceptual understanding of research design as well as the important role of science in counseling and counseling psychology today. In doing so, the text fully addresses the strengths and weaknesses of all of the major designs, and focuses on a broad array of methodological issues. In addition to introducing students to the existing scientific literature in counseling and counseling psychology, the authors address professional writing, ethics, and research training. Their evenhanded approach provides students with an understanding of the various types of research, including both quantitative and qualitative approaches. `A really fine book... an impressive work that adds much to the development of the use of qualitative methodology in social work research' - William J Reid, University at Albany 'The back cover of the book proclaims that "Qualitative Research in Social Work will be essential reading for all students, practitioners and researchers undertaking social work research." That just about sums it up for me' - British Journal of Social Work `This book is a significant milestone in the development of social work research. It is characterized by an unparalleled command of the field of qualitative research in social work, and by a commitment to an understanding of the demands and potential of day-to-day social work practice' - Mike Fisher, Director of Research, National Institute for Social Research `Qualitative Research in Social Work edited by Ian Shaw and Nick Gould, provides a state-of-the-art exposition and analysis of qualitative inquiry in relation to social work.... The book has an unusual degree of coherence for one with several authors. The five chapters by the editors (parts one and three) do an exceptional job of providing the necessary background information and setting the context for the six application chapters and of highlighting and discussing the issues raised in those chapters. The editors are respected scholars well-versed in the theory and practice of qualitative research. Similarly, the

contributing authors represent both considerable experience in this field and a diversity of interests. This combination makes Qualitative Research in Social Work an excellent text for students, practitioners, and researchers alike. It is a benchmark for social work progress in this area and points the way for the continued development of qualitative inquiry' - Professor Stanley L Witkin, Department of Social Work, University of Vermont There is a clear need for a book which treats qualitative research as a substantive theme within social work, setting epistemological and methodological issues in a context whereby the agenda is set by, and is relevant to, social work. Qualitative Research in Social Work is just such a book and will be immensely useful for students, practitioners and researchers interested in and undertaking social work research. In the introductory chapters the co-authors set qualitative research within a context of social work developments and problems. The central section provides additional topicality and directness through specially commissioned chapters from leading figures in this field each covering key qualitative methods and relating them to social work settings, and the final section which reviews qualitative research in social work, and aims to exemplify ways in which social work thought and practice can be advanced through research. Expanded and updated from the Electronic Resources section, The APA style guide to electronic resources outlines for students and writers the key elements with numerous examples. Dissertations and theses; bibliographies; curriculum and course material; reference materials, including Wiki; gray literature, such as conference hearings, presentation slides, and policy briefs; general interest media and alternative presses such as audio podcasts; and online communities, such as Weblog posts and video Weblog posts.

Metaphor and dialectic are modes of thinking that influence the ways in which we identify what we have in common with others, how we differ and how we manage this diversity to achieve organizational goals. This book explores how we can become more aware of these unconscious processes and challenge stereotypes.

Few industries have expanded faster over the last fifty years than tourism. Tourism has brought employment to millions, frequently in the poor and more remote parts of the world, and given pleasure, variety, rest and recreation to countless numbers of travelers and holiday-makers. It has at the same time destroyed and polluted pristine environments, threatened local cultures, and in doing so, frequently devalued just those characteristics of a place that had made it a desirable tourist objective. The issues that tourism raises are of critical and vital importance throughout the world: this book provides a much-needed geographical perspective upon them. The authors focus on both the production and consumption of tourism, and show that it is this interrelationship which holds the key to understanding the ways in which tourism shapes, and reshapes, human and physical environments. They analyze the key features of the tourism and leisure industries, and place them in the context of changing social, political and economic structures and behavior. The argument is accompanied throughout by illustrative case studies, drawn from a wide range of countries, including both the developed and developing economies.

Are you evil? In Making Evil, Julia Shaw uses a mix of science, popular culture and real-life examples to investigate the darker side of human nature. How similar is your brain to a psychopath's? How many people have murder fantasies? Can AI be evil? Do your sexual proclivities make you a bad person? Who becomes a terrorist? This is a surprising and

wickedly entertaining exploration of a darkly compelling subject.

Gender, Power and Political Speech explores the influence of gender on political speech by analyzing the performances of three female party leaders who took part in televised debates during the 2015 UK General Election campaign. The analysis considers similarities and differences between the women and their male colleagues, as well as between the women themselves; it also discusses the way gender - and its relationship to language - was taken up as an issue in media coverage of the campaign. Bringing key developments and debates together in a single volume, this book provides an authoritative guide for students and practitioners embarking on qualitative research in social work and related fields. Frequently illustrated with contemporary and classic case examples from the authors' own empirical research and from international published work, and with self-directed learning tasks, the book provides insight into the difficulties and complexities of carrying out research, as well as sharing

'success' stories from the field. Shaw and Holland have long experience of writing for practitioners and students and in making complex concepts accessible and readable, making this an ideal text for those engaging in qualitative social work research at any level. Ian Shaw is a Professor of Social Work at the University of York and at the University of Aalborg. Sally Holland is a Reader in Social Work at the School of Social Sciences in Cardiff University.

Many academics and practitioners believe that evaluation has a vital role to play in software engineering. As well as evaluating both application level and component level products, software engineers need to be concerned with the evaluation of development processes, engineering methods and supplier organizations. However, both academics and practitioners are concerned about the cost and effectiveness of applying many of the existing assessment methods. One of the aims of the workshop was to address the question of justifying the use of empirical assessment and evaluation in software engineering, as well as to hear about practical experiences. Both this theme, together with the other issues involved in evaluation, were addresses through technical presentations and experience reports. Thus, the worlshop was a unique forum dedicated to the presentation and discussion of research and practical experiences addressing all aspects of empirical assessment and evaluation in software engineering.

It is evident that organizations are becoming increasingly diverse because of the growing numbers of ethnic minorities in the U. S. and the rise in immigration around the world (U. S. Bureau of Census, 2019). Some estimates indicate that by 2060 ethnic minorities in the U. S. will actually make up the majority of the population (U. S. Bureau of Census, 2019), and national minority group members will constitute over 14% of the 770 million people in the European Union (Worldwide Population Estimates, 2017). Thus, organizations around the world are faced with numerous challenges associated with attracting, motivating, and retaining employees who are culturally diverse, and we need a better understanding of how to increase the inclusion of diverse group members in organizations. This edited book includes twelve cutting edge articles written by subject matter experts on an array of topics including: (a) the influence of multiculturalism on HR practices, (b) factors affecting the success of corporate women, (c) stereotypes of racial minorities, (d) effect sizes in diversity research, (e) true identities of stigmatized persons, (f) diversity training, (g) LGBTQ issues, (h) age, (I) strategies for creating inclusive climates, (j) the development of measure of reactions to perceived discrimination, (k) racial harassment, and (l) unfair discrimination against immigrants. This timely book provides a critical resource for undergraduate and graduate classes in diversity and inclusion in organizations, human resource management, organizational behavior, organizational sociology, and industrial and organizational psychology. Apart from theories and research on diversity and inclusion, the book also considers implications for designing HR policies and processes in organizations. Therefore, the book is especially relevant for practitioners and human resource professionals because it provides guidance on HR practices that can help organizations attract and retain these new organizational members.

Higher education has changed significantly over time. In particular, traditional face-to-face degrees are being revamped in a bid to ensure they stay relevant in the 21st century and are now offered online. The transition for many universities to online learning has been painful—only exacerbated by the COVID-19 pandemic, forcing many in-person students to join their virtual peers and professors to learn new technologies and techniques to educate. Moreover, work has also changed with little doubt as to the impact of digital communication, remote work, and societal change on the nature of work itself. There are arguments to be made for organizations to become more agile, flexible, entrepreneurial, and creative. As such, work and education are both traversing a path of immense changes, adapting to global trends and consumer preferences. The Handbook of Research on Future of Work and Education: Implications for Curriculum Delivery and Work Design is a comprehensive reference book that analyzes the realities of higher education today, strategies that ensure the success of academic institutions, and factors that lead to student success. In particular, the book addresses essentials of online learning, strategies to ensure the success of online degrees and courses, effective course development practices, key support mechanisms for students, and ensuring student success in online degree programs. Furthermore, the book addresses the future of work, preferences of employees, and how work can be re-designed to create further employee satisfaction, engagement, and increase productivity. In particular, the book covers insights that ensure that remote employees feel valued, included, and are being provided relevant support to thrive in their roles. Covering topics such as course development, motivating online learners, and virtual environments, this text is essential for academicians, faculty, researchers, and students

globally.

This work explores and discusses the ethical dilemmas clinicians face in everyday forensic psychiatry practice. We discuss and reflect on ethical issues involving treatment decisions such as antipsychotic polypharmacy, high doses antipsychotics and prescribing anti-libidinal medications. Ethical issues surrounding the use of technology for the management of mentally disordered offenders are explored in depth. The use of the polygraph test, a controversial method of truth facilitation for sex offenders, is discussed. Similarly, we discuss the use of "tagging" for serious offenders that despite being used in the United States of America for a while it has been heavily criticized and opposed. Tagging is gradually being introduced in the UK and other European countries, making consideration of the ethical issues and dilemmas surrounding its use both timely and necessary. This work is a valuable guide for clinicians working in forensic psychiatry settings, particularly when faced with ethical dilemmas concerning decisions around interventions.
