Building Histories offers innovative accounts of five medieval monuments in Delhi—the Red Fort, Rasul Numa Dargah, Jama Masjid, Purana Qila, and the Qutb complex—tracing their modern lives from the nineteenth century into the twentieth. Mrinalini Rajagopalan argues that the modern construction of the history of these monuments entailed the careful selection, manipulation, and regulation of the past by both the colonial and later postcolonial states. Although framed as objective "archival" truths, these histories were meant to erase or marginalize the powerful and persistent affective appropriations of the monuments by groups who often existed outside the center of power. By analyzing these archival and affective histories together, Rajagopalan works to redefine the historic monument—far from a symbol of a specific past, the monument is shown in Building Histories to be a culturally mutable object with multiple stories to tell.

This book examines the intellectual and institutional transformations of four British think tanks in the aftermath of the 2008 global financial crisis. In the context of a crisis of expert authority, González Hernando demonstrates how these organisations modified their mode of public engagement to be seen as authoritative as possible by an ever more mistrustful public. *British Think Tanks After the 2008 Global Financial Crisis* connects sociological thinking on knowledge with research on policy change and the economic debate, through careful analysis of interviews, public accounts, and the 'products' of think tanks themselves. González Hernando argues that demands for knowledge and advice that arose after the crisis energised the work of all four think tanks while also exposing internal tensions, affecting their sources of funding, transforming their institutional structure, and shaping how they engage with their audiences. It will appeal to students and scholars of sociology of knowledge, political sociology, policy studies, economic history, communication, political economy, organisational sociology, and British politics

In everyday life, we often suppose ourselves to be free to choose between several courses of action. But if we examine further, we find that this view seems to rest on metaphysical and meta-ethical presuppositions almost all of which look problematic. How can we be free if everything is determined by factors beyond our control, stretching back in time to the Big Bang and the laws of nature operating then? The only alternative to determinism is indeterminism, but is not indeterminism just there being a certain amount of randomness in the world? Does not randomness hinder you from being the author of your actions? *Free Will: A Guide for the Perplexed* looks at how much of the structure of our everyday judgments can survive the arguments behind such questions and thoughts. In doing so, it explores the alternative arguments that have been advanced concerning free will and related notions, including an up-to-date overview of the contemporary debates. In essence, the book seeks to understand and answer the age-old question, 'What is free will and do we have it?'

But when confronted with wide-spectrum antibiotics, birth control pills, steroids, and a sugar-rich diet, this yeast can proliferate, causing a variety of medical problems. Depression, anxiety, tiredness, allergies, and migraine headaches are some of the symptoms. In the past, besides medication, this disease has been treated with a strict carbohydrate-free diet that not only starved the Candida, but also starved the patient. Former Candida sufferer Helen Gustafson and nutritional consultant Maureen O'Shea join forces to create this user-friendly manual for coping with Candida. A symptom chart leads you through the three stages of a specially tailored diet. With over 60 recipes contributed by such well-known chefs as Marion Cunningham, Nasari David, Wolfgang Puck, and Alice Waters, each stage is a veritable feast of possibilities. This innovative collection of exciting dishes would not be complete without an alphabetical listing of different foods and when they are allowed on the diet. Meal plans and sources for nutritional supplements and anti fungal preparations are presented in an easy-to-use format. The Candida Directory is indeed the most effective tool you can use to put yourself back on the road to recovery and optimum health.

That man is a social being is almost axiomatic. Our interpersonal relationships can be sources of the most rewarding or the most painful of human experiences. To a large measure our accomplishments in life depend on the facility with which we interact with others-our social skill. The acquisition of social skills is, of course, a natural part of the overall socialization process. However, in many instances it becomes necessary or desirable to develop further an individual's social facilities. Such skill development is the topic of this book. Two major goals were kept in mind in the writing of this book. The first was to provide a conceptual framework within which to view social skills. Such a framework allows one to understand why it is important to develop social skills, and the effects that such skill development should have. If the reader has a thorough understanding of the concept of social skills and their development, it becomes possible to make appropriate innovations and adaptations to his or her own circumstances. Without such a framework, social-skills training becomes little more than a collection of disjointed techniques. Also, without a conceptual understanding, procedural innovations are difficult to incorporate into training.
