Blue the Beagle wonders if she is actually the color blue. Funny thing is, all dogs are color-blind, so she may never know for sure. One day Blue finds a magic color mask in the woods, and when she puts it on, she is transformed into Super Beagle and can see ALL THE COLORS. Only trouble is, she doesn't know which color is which. With the help of the mask and her animal friends, she is able to easily learn her colors one at a time. This book offers children a fun interactive way to learn their colors and includes: two Super Beagle masks for the reader to cut out, color, and wear when reading and playing with friends. As well as, a sketch page to practice drawing Super Beagle. In Beagles, young readers will learn about the physical features and characteristics of beagles. Vibrant, full-color photos and carefully leveled text engage beginning readers as they learn about this dog breed.

This book reports on topics at the interface between mechanical and chemical engineering, emphasizing design, simulation, and manufacturing. Specifically, it covers recent developments in the mechanics of solids and structures, numerical simulation of coupled problems, including fatigue, fluid behavior, particle movement, pressure

distribution. Further, it reports on developments in chemical process technology, heat and mass transfer, energy-efficient technologies, and industrial ecology. Based on the 4th International Conference on Design, Simulation, Manufacturing: The Innovation Exchange (DSMIE-2021), held on June 8-11, 2021, in Lviv, Ukraine, this second volume of a 2-volume set provides academics and professionals with extensive information on trends, technologies, challenges and practice-oriented experience in the above-mentioned areas.

Dead zones are on the rise... Human activity has caused an increase in uninhabitable, oxygen-poor zones--also known as "dead zones"--in our waters. Oxygen is the third most abundant element in the universe, and it is a necessity for nearly all life on Earth. Yet many rivers, estuaries, coastal waters, and parts of the open ocean lack enough of it. In this book, David L. Kirchman explains the impacts of dead zones and provides an in-depth history of oxygen loss in water. He details the role the agricultural industry plays in water pollution, showcasing how fertilizers contaminate water supplies and kickstart harmful algal blooms in local lakes, reservoirs, and coastal oceans. Algae decomposition requires so much oxygen that levels drop low enough to kill fish, destroy bottom-dwelling biota, reduce biological diversity, and rearrange food webs. We can't undo the damage completely, but we can work together to reduce the size and intensity of dead zones in places like the Gulf of Mexico, Chesapeake Bay, and the Baltic Sea. Not only does Kirchman clearly outline what dead zones mean for humanity, he also

supplies ways we can reduce their deadly impact on human and aquatic life. Nutrient pollution in some regions has already begun to decline because of wastewater treatment, buffer zones, cover crops, and precision agriculture. More needs to be done, though, to reduce the harmful impact of existing dead zones and to stop the thousands of new ones from cropping up in our waters. Kirchman provides insight into the ways changing our diet can reduce nutrient pollution while also lowering greenhouse gasses emitted by the agricultural industry. Individuals can do something positive for their health and the world around them. The resulting book allows readers interested in the environment--whether students, policymakers, ecosystem managers, or science buffs--to dive into these deadly zones and discover how they can help mitigate the harmful effects of oxygen-poor waters today.

Galápagos giant tortoises are fascinating—and endangered. They live only on the Galápagos Islands, a chain of volcanic islands in the Pacific Ocean off the coast of Ecuador. These tortoises face threats from the humans who live on—and visit—the islands, as well as from Earth's warming climate. Join author Kate Messner on an journey to the Galápagos Islands to see these incredible creatures up close and discover how cutting-edge technology is helping scientists to study and protect them. “Sit...Stay...Enjoy! Good reader!” —Stephen Colbert The hilarious, heartwarming, and rebarkable true story of Guy the Beagle, Duchess Meghan Markle’s rescue dog. Like all good stories, Guy the Beagle’s begins lost in the woods of Kentucky. But his fortunes change when he’s rescued by none other than Princess...er, Duchess-to-be Meghan Markle. Practically overnight, Guy goes from wags to riches. But does this backwoods beagle have what it takes to be welcomed into the royal family? For the first time ever, Guy reveals how he went from pawper to proper, with help from Emmy award-winning writer and producer of The Late Show with Stephen Colbert Mike Brumm and publishing veteran (and devoted Anglophile) Camille March, beautifully illustrated by EG Keller (illustrator of the New York Times bestselling A Day in the Life of Marlon Bundo). In-depth instruction and practical techniques for building with the BeagleBone embedded Linux platform Exploring BeagleBone is a hands-on guide to bringing gadgets, gizmos, and robots to life using the popular BeagleBone embedded Linux platform. Comprehensive content and deep detail provide more than just a BeagleBone instruction manual-you'll also learn the underlying engineering techniques that will allow you to create your own projects. The book begins with a foundational primer on essential skills, and then gradually moves into communication, control, and advanced applications using C/C++, allowing you to learn at your own pace. In addition, the book's companion website features instructional videos, source code, discussion forums, and more, to ensure that you have everything you need. The BeagleBone's small size, high performance, low cost, and extreme adaptability have made it a favorite development platform, and the Linux software base allows for complex yet flexible functionality. The BeagleBone has applications in smart buildings, robot control, environmental sensing, to name a few; and, expansion boards and peripherals dramatically increase the possibilities. Exploring BeagleBone provides a reader-friendly guide to the device, including a crash course in computer engineering. While following

This edited collection focuses on Aboriginal and M?ori travel in colonial contexts. Authors in this collection examine the ways that Indigenous people moved and their motivations for doing so. Chapters consider the cultural aspects of travel for Indigenous communities on both sides of the Tasman. Contributors examine Indigenous purposes for mobility, including for community and individual economic wellbeing, to meet other Indigenous or non-Indigenous peoples and experience different cultures, and to gather knowledge or experience, or to escape from colonial intrusion. 'This volume is the first to take up three challenges in histories of Indigenous mobilities. First, it analyses both mobility and emplacement. Challenging stereotypes of Indigenous people as either fixed or mobile, chapters deconstruct issues with ramifications for contemporary politics and analyses of Indigenous society and of rural and national histories. As such, it is a welcome intervention in a wide range of urgent issues. Second, by examining Indigenous peoples in both Australia and New Zealand, this volume is

an innovative step in removing the artificial divisions that have arisen from “national” histories. Third, the collection connects the experiences of colonised Indigenous peoples with those of their colonisers, shifting the long-held stereotypes of Indigenous powerlessness. Chapters then convincingly demonstrate the agency of colonised peoples in shaping the actions and the mobility itself of the colonisers. While the volume overall is aimed at opening up new research questions, and so invites later and even more innovative work, this volume will stand as an important guide to the directions such future work might take.’ — Heather Goodall, Professor Emerita, UTS

Notework begins with a striking insight: the writer's notebook is a genre in itself. Simon Reader pursues this argument in original readings of unpublished writing by prominent Victorians, offering a more expansive approach to literary formalism for the twenty-first century. Neither drafts nor diaries, the notes of Charles Darwin, Oscar Wilde, Gerard Manley Hopkins, Vernon Lee, and George Gissing record ephemeral and nonlinear experiences, revealing each author's desire to leave their fragments scattered and unused. Presenting notes in terms of genre allows Reader to suggest inventive new accounts of key Victorian texts, including *The Picture of Dorian Gray*, *On the Origin of Species*, and Hopkins's devotional lyrics, and to reinterpret these works as meditations on the ethics of compiling and using data. In this way, *Notework* recasts information collection as a personal and expressive activity that comes into focus against large-scale systems of knowledge organization. Finding resonance between today's digital culture and its nineteenth-century precursors, Reader honors our most disposable, improvised, and fleeting textual gestures.

This comprehensive text summarizes what is known about the myriad of different neurological conditions that cause dysfunction of communication, swallowing, and breathing as it relates to the upper aerodigestive tract. It serves to provide clinicians and scientists, at all levels of experience, a practical and thorough review of these diseases, their management, and frontiers in science. Chapters are written by experts in these conditions from a broad spectrum of medical specialties in order to create a book that is inclusive of diagnostic and therapeutic considerations that clinicians should think about when caring for patients with these conditions. Neurologic and Neurodegenerative Diseases of the Larynx will be an instrumental resource in guiding clinicians to better recognize the subtle and not so subtle voice, swallowing, and airway manifestations of these diseases, and improve management of patient symptoms and concerns in order to maximize both quality of life and longevity. It will aide otolaryngologists, laryngologists, neurologists, speech language pathologists, and other allied health care professionals in developing a more efficient, evidence-based, patient-focused, and multi-specialty approach to managing these complex and challenging patients.

Vaccines is a well-written book on the subject of providing crucial information to students and researchers in the field of vaccinology. The introductory chapter, contributed by the editor (Dr. Vijay Kumar) of the book, provides the brief introduction to the history of the development of current forms of vaccine, which is difficult to find easily in one place. In addition, other chapters of the book are written by experts in the field. For example, the second chapter looks at the emerging role of developing countries in the innovation and production of vaccines. Other chapters provide information regarding different types of vaccines, development of vaccines for

zoonotic viral infections, and regulatory affairs for genetically modified organism vaccines. NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976, pre-dating the prestigious INIS database, which began in 1970. NSA existed as a printed product (Volumes 1-33) initially, created by DOE's predecessor, the U.S. Atomic Energy Commission (AEC). NSA includes citations to scientific and technical reports from the AEC, the U.S. Energy Research and Development Administration and its contractors, plus other agencies and international organizations, universities, and industrial and research organizations. References to books, conference proceedings, papers, patents, dissertations, engineering drawings, and journal articles from worldwide sources are also included. Abstracts and full text are provided if available. FinTech has developed rapidly in recent years, and with these developments new challenges arise, particularly for regulators: how do you apply current law to these ever-changing concepts in a world of continual technological advancement?

Voyage of the Beagle chronicles Charles Darwin's five years as a naturalist on board the H.M.S. Beagle. The notes and observations that he recorded in his diary included Chile, Argentina and Galapagos Islands and encompasses the ecology, geology and anthropology of the places he visits. A fascinating travel memoir the ideas that were later to evolve into Darwin's theory of natural selection find their naissance in Voyage of the Beagle.

This book provides an in-depth review on various aspects of canine and feline hypertension. Physiology, pathophysiology, epidemiology and pathological consequences of high blood pressure in cats and dogs are discussed. A comparative approach is taken, the underpinning research is critically evaluated and knowledge gaps identified. In addition, the reader is presented with evidence-based treatment strategies. The book targets researchers, graduate students and clinical specialists in small animal internal medicine as well as veterinary clinicians with interest in nephrology, cardiology, neurology and ophthalmology.

When you look at a Beagle puppy, do you see a future hunter or baggage inspector? If not, you should. Not every young Beagle grows up to be a stay-at-home pet. The little puppies in this book share about their big dreams for adulthood!

On December 27, 1831, the HMS Beagle set sail from Plymouth harbor. On board were a crew of 73 men, Captain Robert Fitzroy, and a young naturalist named Charles Darwin. The expedition lasted almost five years, during which

Spirits in the Bush surveys the art of Gippsland, from the colonial to the contemporary. This expansive, original and illuminating compendium leads readers on a journey through artistic and provincial history, interweaving the lives of residents and visitors. Collectively, it presents a vivid account of the influence of place on the cultural imagination. A fascinating cast of characters includes some of Australia's best-known and most-loved artists, including Eugène von Guérard, Jessie Traill, Arthur Streeton, Clarice Beckett, Sidney Nolan, Arthur Boyd, Fred Williams, and Jeffrey Smart. Readers will discover also a host of new names destined for recognition. Spirits in the Bush reveals how artists have grappled with a region that is in equal measures beautiful and brutal, and which has provided the stage for many of the key battles in Australian art history. Bound by geographical camaraderie, and with the spectre of Gippsland's past as an unwavering presence, the stories of their art unfold in a unique dialogue. This publication was made possible through the generous support of the Gordon Darling Foundation.
