Psychiatric genetics is an exciting new discipline that explores how our minds and behavior are influenced by our genes. Increased interest in this area of medical genetics has been sparked by advances in molecular genetic techniques, the genome project, the neurosciences, the role of genes in somatic diseases, and the linking of specific genes with complex mental disorders. This Handbook is the definitive resource on this complex, and sometimes controversial, new field.

Spectroscopic Properties of Inorganic and Organometallic Compounds provides a unique source of information on an important area of chemistry. Divided into sections mainly according to the particular spectroscopic technique used, coverage in each volume includes: NMR (with reference to stereochemistry, dynamic systems, paramagnetic complexes, solid state NMR and Groups 13-18); nuclear quadrupole resonance spectroscopy; vibrational spectroscopy of main group and transition element compounds and coordinated ligands; and electron diffraction. Reflecting the growing volume of published work in this field, researchers will find this Specialist Periodical Report an invaluable source of information on current methods and applications. Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research. Compiled by teams of leading experts in their specialist fields, this series is designed to help the chemistry community keep current with the latest developments in their field. Each volume in the series is published either annually or biennially and is a superb reference point for researchers. [www.rsc.org/spr](http://www.rsc.org/spr)

Deals with imaging of pathology of the visual system. This book is divided into two parts, general and special. In the general part, important basics of modern imaging methods are discussed. The knowledge on the indication, technique, and results of functional MR imaging is also presented.

With 505 evaluations under his belt, Okamoto (information management, Ashahi U., Japan) has personally evaluated and published phase diagrams and related data for more systems than any other living professional. Here he compiles phase diagrams of 2,335 systems, attempting to cover all binary systems

During WWI, the Commission for Relief in Belgium (CRB) initiated, organized, and supervised the largest food and relief drive the world had ever known. Working in concert with its counterpart in Belgium, the Comité National, the CRB fed and clothed for four years more than 9 million Belgians and northern French trapped behind German lines. Because the United States had declared its neutrality at the start of the war, young idealistic Americans volunteered to be CRB delegates and go into German-occupied Belgium to guarantee the imported food would not be taken by the Germans. The interlacing stories of German brutality, Belgian resistance, and the Americans of the CRB, all began back in those chaotic days of August 1914, when the Germans attacked Belgium on their way to France. Few could have guessed it then, but the invasion was a topping domino that caused a tumbling together of extraordinary people into a chain reaction of life-and-death situations far from the trenches and killing fields of World War I. And hanging in the balance were millions of civilian lives. It is a story that few have heard. The nonfiction *Behind the Lines* covers the time from August through December 1914. Using lively personal details, the book follows a handful of young CRB delegates; a twenty-two-year-old Belgian woman; two U.S. diplomats; a Belgian businessman and a priest who team up to fight the German occupation; and the head of the CRB, Herbert Hoover.

Covers topics in the diagnosis and treatment of vascular problems, including key non-operative and interventional methods as well as state-of-the-art surgical procedures. This edition is fully revised and updated.

Now the standardisation work of DAB (Digital Audio Broadcasting) system is finished many broadcast organisations, network providers and receiver manufacturers in European countries and outside of Europe (for example Canada and the Far East) will be installing DAB broadcast services as pilot projects or public services. In addition some value added services (data and video services) are under development or have already started as pilot projects. The new digital broadcast system DAB distinguishes itself from existing conventional broadcast systems, and the various new international standards and related documents (from ITU-R, ISO/IEC, ETSI, EBU, EUREKA147, and others) are not readily available and are difficult to read for users. Therefore it is essential that a well structured technical handbook should be available. The Second Edition of Digital Audio Broadcasting has been fully updated with new sections and chapters added to reflect all the latest developments and advances. Digital Audio Broadcasting: Provides a fully updated comprehensive overview of DAB Covers international standards, applications and other technical issues Combines the expertise of leading researchers in the field of DAB Now covers such new areas as: IP-Tunneling via DAB; Electronic Programme Guide for DAB; and Metadata A comprehensive overview of DAB specifically written for planning and system engineers, developers for professional and domestic equipment manufacturers, service providers, as well as postgraduate students and lecturers in communications technology.

The aim of this reference work is to provide the researcher with a comprehensive compilation of all up to now crystallographically identified inorganic substances in only one volume. All data have been processed and critically evaluated by the "Pauling File" editorial team using a unique software package. Each substance is represented in a single row containing information adapted to the number of chemical elements.
