VOYAGES IN WORLD HISTORY, BRIEF EDITION, is a mainstream text for the world history course that masterfully uses the theme of movement--the journeys of peoples, ideas, and goods--to help the reader make sense of the huge range of people, places, and events throughout history. For most people, Revelation is a book that is either largely ignored, or it is the object of such fanatical study and fanciful interpretation that it passes from the realm of the interesting and helpful into the realm of fantasy and speculation. Much literature has been published in recent years on its interpretation some of which is scholarly and technical, and some of which is populist and accessible. The problem is that the technical and scholarly material frequently requires careful and detailed study, combined with an advanced level of knowledge, whereas much of the populist material tends toward the fanatical and fanciful. The aim of this book is to bridge this gap. It is written with second and third year university students in mind, and would also be helpful for pastors and those in local churches who want to take seriously their study of this often (needlessly) confusing biblical book.

The history of science is a story of human discovery--intertwined with religion, philosophy, economics and technology. The fourth in a series, this book covers the beginnings of the modern world, when 16th-century Europeans began to realize that their scientific achievements surpassed those of the Greeks and Romans. Western Civilization organized itself around the idea that human technological and moral progress was achievable and desirable. Science emerged in 17th-century Europe as scholars subordinated reason to empiricism. Inspired by the example of physics, men like Robert Boyle began the process of changing alchemy into the exact science of chemistry. During the 18th century, European society became more secular and tolerant. Philosophers and economists developed many of the ideas underpinning modern social theories and economic policies. As the Industrial Revolution fundamentally transformed the world by increasing productivity, people became more affluent, better educated and urbanized, and the world entered an era of unprecedented prosperity and progress.

Two major dividing lines have formed the megastructure of Eurasia, determining the historical epochs of the continent's peoples. The first, vertical (longitudinal) line has separated East and West since the Paleolithic Age. The East was dominated by Mongol peoples speaking Sino-Tibetan, Manchu-Tungus, and Altaic languages. The Caucasoid peoples of the West spoke mostly Indo-European, Semite, and Finno-Ugric languages. The second line divided the continent horizontally (by latitude) into North and South. This division was closely connected with the Eurasian Steppe Belt. To the north of it lay the world of hunter-gatherers and fishermen. To the south, settled agriculture was dominant. The Steppe Belt itself was the domain of pastoralists, the nomadic and semi-nomadic herders. These lines converged at the entrance to the Great Silk Road. With the swift development of horse domestication and horseback riding, the nomads moved--from the Early Metal Age (500-400 BCE) to Genghis Khan's and the Genghisid's Great Empire (1200-1400 CE)--to the forefront of Eurasian history as their world became increasingly involved in dramatic and sometimes tragic relationships with their southern neighbors. This book focuses on the tangle of problems in these nomadic peoples' history.

The world is heading toward a climax. End time prophecies in the book of Revelation are nearing the time of their fulfillment. As we get closer, it is imperative we understand what to expect will occur on the world scene. Here are some questions about the last book of the Bible that we need answers to: - What does it say about the future of the world? - Where does it place the church in the last days? - What does it say about Israel in the end time? - How does it portray the return of Christ? THE UNVEILING conveys with clarity and conviction what the book of Revelation reveals concerning these issues.

The first comprehensive and authoritative history of work and labour in Africa; a key text for all working on African Studies and Labour History worldwide.

Maurice Blanchot (1907–2003) was one of the most important writers of the twentieth century. His novels, shorter narratives, literary criticism, and fragmentary texts exercised enormous influence over several generations of writers, artists, and philosophers. In works such as Thomas the Obscure, The Instant of my Death, The Writing of the Disaster, The Unavowable

Community, Blanchot produced some of the most incisive statements of what it meant to experience the traumas and turmoils of the twentieth century. As a journalist and political activist, Blanchot had a public side that coexisted uneasily with an inclination to secrecy, a refusal of interviews and photographs, and a reputation for mysteriousness and seclusion. These public and private Blanchots came together in complicated ways at some of the twentieth century's most momentous occasions. He was among the public intellectuals participating in the May '68 revolution in Paris and helped organize opposition to the Algerian war. During World War II, he found himself moments away from being executed by the Nazis. More controversially, he had been active in far-right circles in the '30s. Now translated into English, Christophe Bident's magisterial, scrupulous, much-praised critical biography provides the first full-length account of Blanchot's itinerary, drawing on unpublished letters and on interviews with the writer's close friends. But the book is both a biography and far more. Beyond filling out a life famous for its obscurity, Bident's book will transform the way readers of Blanchot respond to this major intellectual figure by offering a genealogy of his thought, a distinctive trajectory that is at once imaginative and speculative, at once aligned with literary modernity and a close companion and friend to philosophy. The book is also a historical work, unpacking the 'transformation of convictions' of an author who moved from the far-right in the 1930s to the far-left in the 1950s and after. Bident's extensive archival research explores the complex ways that Blanchot's work enters into engagement with his contemporaries, making the book also a portrait of the circles in which he moved, which included friends such as Georges Bataille, Marguerite Duras, Emmanuel Levinas, Michel Foucault, and Jacques Derrida. Finally, the book traces the strong links between Blanchot's life and an oeuvre that nonetheless aspires to anonymity. Ultimately, Bident shows how Blanchot's life itself becomes an oeuvre—becomes a literature that bears the traces of that life secretly. In its even-handed appraisal, Bident's sophisticated reading of Blanchot's life together with his work offers a much-needed corrective to the range of cruder accounts, whether from Blanchot's detractors or from his champions, of a life too easily sensationalized. This definitive biography of a seminal figure of our time will be essential reading for anyone concerned with twentieth-century literature, thought, culture, and politics.

If historical culture is the specific and particular ways that a society engages with its past, this book aims to situate the professional practice of public history, now emerging across the world, within that framework. It links the increasingly varied practices of memory and history-making such as genealogy, podcasting, re-enactment, family histories, memoir writing, film-making and facebook histories with the work that professional historians do, both in and out of the academy. Making Histories asks questions about the role of the expert and notions of authority within a landscape that is increasingly concerned with connection to the past and authenticity. The book is divided into four parts: 1. Resistance, Rights, Authority 2. Memory, Memorialization, Commemoration 3. Performance, Transmission, Reception 4. Family, Private, Self The four sections outline major themes emerging in public history across the world in the 21st century which are all underpinned by the impact of new media on historical practice and our central argument for the volume which advocates a more capacious definition of what constitutes 'public history'.

E. H. Gombrich's *Little History of the World*, though written in 1935, has become one of the treasures of historical writing since its first publication in English in 2005. The Yale edition alone has now sold over half a million copies, and the book is available worldwide in almost thirty languages. Gombrich was of course the best-known art historian of his time, and his text suggests illustrations on every page. This illustrated edition of the *Little History* brings together the pellucid humanity of his narrative with the images that may well have been in his mind's eye as he wrote the book. The two hundred illustrations—most of them in full color—are not simple embellishments, though they are beautiful. They emerge from the text, enrich the author's intention, and deepen the pleasure of reading this remarkable work. For this edition the text is reset in a spacious format, flowing around illustrations that range from paintings to line drawings, emblems, motifs, and symbols. The book incorporates freshly drawn maps, a revised preface, and a new index. Blending high-grade design, fine paper, and classic binding, this is both a sumptuous gift book and an enhanced edition of a timeless account of human history.

This new volume explores the theory and practice of war and peace in modern historical context. In fifteen clear and concise chapters, this book hits the high and low points of international politics over a two hundred year period, plus a brief foray into the future out to 2025. *War, Peace and International Relations* serves as an excellent introduction to the international history of the past two centuries, showing how those two centuries were shaped and reshaped extensively by war. This book takes a broad view

of what was relevant to the causes, courses, and consequences of wars. This upper-level textbook is an invaluable resource for students of strategic studies, security studies, international relations and international history.

This book, the first in a roughly chronological series, explores the development of the methodology and major ideas of science, in historical context, from ancient times to the decline of classical civilizations around 300 A.D. It includes details specific to the histories of specialized sciences including astronomy, medicine and physics—along with Roman engineering and Greek philosophy. The first book to present the true identity of the mythic figure Merlin • Uncovers historical evidence that the legend of Merlin was based on the life of a real man • Reveals that Avalon, Merlin's final resting place, was an island in the United States The legendary figure Merlin is known throughout the world as the wizard of Camelot who was counselor to King Arthur and helped that monarch create the Round Table. Through the course of a 20-year investigation Graham Phillips has uncovered evidence that this famous story was based on the life of an actual historical figure: the son of a Roman consul who became the last of the Romans to rule Britain in the fifth century A.D. Furthermore, the evidence reveals that he died and was buried in what is now the United States. According to legend, Merlin ended his life on the mystical island of Avalon. A 1500-year-old saga tells how Merlin left Britain on a boat bound for a mysterious island to the west. The places described in Merlin's voyage, Phillips argues, would only have been seen by someone who had journeyed to the New World. For example, the island where boiling fountains bubble from the ground could be the geysers of Iceland, and the island with rivers of ice, the glaciers of Greenland. During his research Phillips discovered that a site believed to be Merlin's grave was found by the first British settlers in North America: a secret location said to have been preserved in the works of William Shakespeare and the coded writings of the Freemasons. Phillips follows a trail of historical clues that leads ultimately to a mysterious New England tomb. Here a final encrypted message not only reveals the whereabouts of Merlin's grave but contains evidence that Merlin's descendants still survive and, through a merger with the Spencer family of Princess Diana, may once again ascend the British throne.
