Show Students How Geography Affects Their Lives.

We know very little about variations in urban class and ethnic segregation among nations and even less about differences among cities in different regions of the world. Spatial organization (places and neighbourhoods) matters significantly in some cities in reproducing class relations and ethno-racial hierarchies, but may be much less important in others. The degree and the impact of segregation depend upon contextual diversity. By emphasizing the importance of contextual diversity in the study of urban residential segregation, the book questions currently popular urban theories such as global city, neoliberal urbanism, and gentrification. These theories tend to dissociate cities from their national and regional context and thus ignore their history, culture, politics and institutions. The aim of this book is to introduce the significantly different urban experiences in social and spatial segregation patterns and rationales which exist among the world's regions and to demonstrate that urban theory needs to draw systematically upon this wide range of experiences. The cities selected (Athens, Beijing, Budapest, Copenhagen, Hong Kong, Madrid, Paris, São Paulo, Taipei, and Tokyo) were chosen in order to achieve geographical spread, to maximise the diversity of types of socioeconomic regulation. This volume is thus able to avoid the interpretative limitations and misconstructions resulting from universalizing the Anglo-American experience.

As political, economic, and environmental issues increasingly spread across the globe, the science of geography is being rediscovered by scientists, policymakers, and educators alike. Geography has been made a core subject in U.S. schools, and scientists from a variety of disciplines are using analytical tools originally developed by geographers. *Rediscovering Geography* presents a broad overview of geography's renewed importance in a changing world. Through discussions and highlighted case studies, this book illustrates geography's impact on international trade, environmental change, population growth, information infrastructure, the condition of cities, the spread of AIDS, and much more. The committee examines some of the more significant tools for data collection, storage, analysis, and display, with examples of major contributions made by geographers. *Rediscovering Geography* provides a blueprint for the future of the discipline, recommending how to strengthen its intellectual and institutional foundation and meet the demand for geographic expertise among professionals and the public.

This fourth edition of *The Geography of Tourism and Recreation* provides students with a comprehensive introduction to the interrelationship between tourism, leisure and recreation from geographical and social science perspectives. "Geography for students of the International Baccalaureate Diploma, New South Wales Higher School Certificate, and other senior secondary geography courses with a contemporary global focus" -- back cover.

Global Migration provides a clear, concise, and well-organized discussion of historical patterns and contemporary trends of migration, while guiding the readers through an often difficult and politicised topic. Aimed primarily at undergraduate and Master's students, the text encourages the readers to reflect on economic processes, politics, immigrant lives and raises debates about inclusion, exclusion, and citizenship. The text critically highlights the global character of contemporary migration and the importance of historical context to current processes and emphasises the role of gender, race and national ideologies in shaping migration experiences. Using over a decade of their own insight into teaching undergraduate migration courses in the US and the UK, and the knowledge and understanding of the subject they have acquired as migration researchers, the authors offer an accessible and student-friendly manner for readers to understand and explore the complex issue of migration. The book features numerous international case studies, a chapter dedicated to the perspective of the immigrants themselves, as well as key terms and further readings at the end of each chapter. Both theoretically and empirically informed Global Migration examines the subject in a holistic and expansive way. It will equip students with an understanding of the complex issues of migration and serve as a guide for instructors in structuring their courses and in identifying important bodies of scholarly research on migration issues.

Providing a rich overview of to the major topics in human geography, this book offers a unique, engaging and relevant perspective to this ever-changing subject. Focussing on some of the key geographical challenges facing the world at the beginning of the 21st century, this new edition examines the forces that shape economies and societies. Economic development, population growth and poor resource management have combined to alter the planet's natural environment in dramatic and alarming ways. For over twenty years, considerable research and debate have focused on clarifying or disputing linkages between various forms of environmental change and various understandings of security. At one extreme lie sceptics who contend that the linkages are weak or even non-existent; they are simply attempts to harness the resources of

the security arena to an environmental agenda. At the other extreme lie those who believe that these linkages may be the most important drivers of security in the 21st century; indeed, the very future of humankind may be at stake. This book brings together contributions from a range of disciplines to present a critical and comprehensive overview of the research and debate linking environmental factors to security. It provides a framework for representing and understanding key areas of intellectual convergence and disagreement, clarifying achievements of the research as well as identifying its weaknesses and gaps. Part I explores the various ways environmental change and security have been linked, and provides principal critiques of this linkage. Part II explores the linkage through analysis of key issue areas such as climate change, energy, water, food, population, and development. Finally, the book concludes with a discussion of the value of this subfield of security studies, and with some ideas about the questions it might profitably address in the future. This volume is the first to provide a comprehensive overview of the field. With contributions from around the world, it combines established and emerging scholars to offer a platform for the next wave of research and policy activity. It is invaluable for both students and practitioners interested in international relations, environment studies and human geography.

'Human Geography' examines the major trends, debates, research and conceptual evolution of human geography during the twentieth century. Considering each of the subject's primary subfields in turn, it addresses developments in both continental European and Anglo-American geography, providing a cutting-edge evaluation of each. Written clearly and accessibly by leading researchers, the book combines historical astuteness with personal insights and draws on a range of theoretical positions. A central theme of the book is the relative decline of the traditional subdisciplines towards the end of the twentieth century, and the continuing movement towards interdisciplinarity in which the various strands of human geography are seen as inextricably linked. This stimulating and exciting new book provides a unique insight into the study of geography during the twentieth century, and is essential reading for anyone studying the history and philosophy of the subject.
