In 2002, a researcher for The Harvard Crimson came across a restricted archive labeled "Secret Court Files, 1920." The mystery he uncovered involved a tragic scandal in which Harvard University secretly put a dozen students on trial for homosexuality and then systematically and persistently tried to ruin their lives. In May of 1920, Cyril Wilcox, a freshman suspended from Harvard, was found sprawled dead on his bed, his room filled with gas--a suicide. The note he left behind revealed his secret life as part of a circle of (cut "young") homosexual students. The resulting witch hunt and the lives it cost remains one of the most shameful episodes in the history of America's premiere university. Supported by legendary Harvard President Lawrence Lowell, Harvard conducted its investigation in secrecy. Several students committed suicide; others had their lives destroyed by an ongoing effort on the part of Harvard to destroy their reputations. Harvard's Secret Court is a deeply moving indictment of the human toll of intolerance and the horrors of injustice that can result when a powerful institution loses its balance.

After World War II, the major powers faced social upheaval at home and anti-colonial wars around the globe. Alarmed by conflict in Korea that could change U.S.-Soviet relations from chilly to nuclear, ordinary people and policymakers created a fantasy of a bipolar Cold War world in which global and domestic order was paramount, Masuda Hajimu shows.

In this much needed resource, Maryellen Weimer-one of the nation's most highly regarded authorities on effective college teaching-offers a comprehensive work on the topic of learner-centered teaching in the college and university classroom. As the author explains, learner-centered teaching focuses attention on what the student is learning, how the student is learning, the conditions under which the student is learning, whether the student is retaining and applying the learning, and how current learning positions the student for future learning. To help educators accomplish the goals of learner-centered teaching, this important book presents the meaning, practice, and ramifications of the learner-centered approach, and how this approach transforms the college classroom environment. Learner-Centered Teaching shows how to tie teaching and curriculum to the process and objectives of learning rather than to the content delivery alone.

A novel of man's inhumanity to man and a brilliant study of everyday anti-semitism at work in society, FOCUS is set in Brooklyn in the last years of World War 2. It is the story of Lawrence Newman, office worker and ordinary anti-semite, who suddenly is mistaken for a Jew when he begins to wear glasses. The change in his appearance leads inevitably to him experiencing the bigotry of the neighbours he'd been friendly with before; and in due course he finds support and understanding with one of the very Jewish immigrants he had previously so despised. This highly allegorical novel, possibly the first in American literature to deal directly with anti-semitism, is narrated with Miller's customary eloquence, and incorporates a cleverly-fashioned subplot concerning Newman's marriage to a woman whom he once refused to employ. This edition includes a preface entitled 'The Face in the Mirror: Anti-Semitism Then and Now', in which Miller writes: 'Focus is much involved with impersonations. Its central image is the turning lens of the mind of an anti-Semitic man forced by his circumstances to see anew his own relationships to the Jew.' This novel explores the consequences which unravel once L

This report from the National Task Force on Civic Learning and Democratic Engagement calls on the nation to reclaim higher education's civic mission. Commissioned by the Department of Education and released at a White House convening in January 2012, the report pushes back against a prevailing national dialogue that limits the mission of higher education to workforce preparation and training while marginalizing disciplines basic to democracy. It calls on educators and public leaders to advance a 21st century vision of college learning for all students, a vision with civic learning and democratic engagement an expected part of every student's college education. The report documents the nation's anemic civic health and includes recommendations for action that address campus culture, general education, and civic inquiry as part of major and career fields as well as hands on civic problem solving across differences. This report was prepared at the invitation of the U.S. Department of Education under the leadership of the Global Perspective Institute, Inc. (GPI) and AAC&U. It was developed with input from a series of national roundtables involving leaders from all parts of the higher education and civic renewal communities.

In Robert Ward's *The Crucible: Creating an American Musical Nationalism*, Robert Paul Kolt explores the life of the American composer Robert Ward through an examination of his most popular and enduring work, *The Crucible*. Focusing on the musical-linguistic relationships within the opera, Kolt demonstrates Ward's unique synthesis of text and music, one that lends itself to the perception of American musical nationalism. This book contains the most thorough and in-depth biography of Ward yet in print. Based on interviews with the composer, Kolt presents new information about Ward's life and career, focusing on his opera and examining the formation and construction of *The Crucible*'s libretto and score, in turn offering new insights into the process of composing an opera. Kolt observes how the libretto's linguistic aspects helped Ward formulate the opera's melodic and rhythmic musical material. A detailed and unique analysis of the opera, particularly the musical and linguistic techniques Ward employed, demonstrates how these techniques lend themselves to the opera's reception as a work of American musical nationalism. The book also provides yet unpublished information on Arthur Miller's play, examining how it came to be written and soon after became the basis for Ward's work. Several appendixes provide a fuller picture, including a deleted scene from Miller's play and Ward's version of the scene, a chronological overview of the Salem Witchcraft Trials, and illustrations and photo reproductions from Ward's manuscript.

She meets Miriam, who as a sixteen-year-old might have started the Third World War, visits the man who painted the line which became the Berlin Wall and gets drunk with the legendary 'Mik Jagger' of the East, who the authorities once declared - to his face - to 'no longer exist'.

A creeping sense of panic and paranoia characterized the Red Scare as millions of Americans began to subscribe to the belief that communists and socialists were infiltrating American institutions. This compelling volume examines the Red Scare from diverse perspectives to facilitate discussions and research of relevant topics regarding this tense period of American history. Chapters examine topics such as the conditions that spawned radical movements, the response to communist activity including blacklists and F.B.I. surveillance, initiatives in congress to stamp out threats from the Left, and the downfall and aftermath of the Red Scare.

An interdisciplinary examination of the evolutionary breakthroughs that rendered the brain accessible to itself. In *The Crucible of Consciousness*, Zoltan Torey offers a theory of the mind and its central role in evolution. He traces the evolutionary breakthrough that rendered the brain accessible to itself and shows how the mind-boostered brain works. He identifies what it is that separates the human's self-reflective consciousness from mere animal awareness, and he maps its neural and linguistic underpinnings. And he argues, controversially, that the neural technicalities of reflective awareness can be neither algorithmic nor spiritual—neither a computer nor a ghost in the machine. The human mind is unique; it is not only the epicenter of our knowledge but also the outer limit of our intellectual reach. Not to solve the riddle of the self-aware mind, writes Torey, goes against the evolutionary thrust that created it. Torey proposes a model that brings into a single focus all the elements that make up the puzzle: how the brain works, its functional components and their interactions; how language evolved and how syntax evolved out of the semantic substrate by way of neural transactions; and why the mind-endowed brain deceives itself with entelechy-type impressions. Torey first traces the language-linked emergence of the mind, the subsystem of the brain that enables it to be aware of itself. He then explores this system: how consciousness works, why it is not transparent to introspection, and what sense it makes in the context of evolution. The "consciousness revolution" and the integrative focus of neuroscience have made it possible to make concrete formerly mysterious ideas about the human mind. Torey's model of the mind is the logical outcome of this, highlighting a coherent and meaningful role for a reflectively aware humanity.
