It was a simple incident in the life of James Clavell—a talk with his young daughter just home from school—that inspired this chilling tale of what could happen in twenty-five quietly devastating minutes. He writes, "The Children's Story came into being that day. It was then that I really realized how vulnerable my child's mind was —any mind, for that matter—under controlled circumstances. Normally I write and rewrite and re-rewrite, but this story came quickly—almost by itself. Barely three words were changed. It pleases me greatly because I kept asking the questions... Questions like, What's the use of 'I pledge allegiance' without understanding? Like Why is it so easy to divert thoughts? Like What is freedom? and Why is so hard to explain? The Children's Story keeps asking me all sorts of questions I cannot answer. Perhaps you can—then your child will...."

This book will strengthen a student's grasp of the laws of physics by applying them to practical situations, and problems that yield more easily to intuitive insight than brute-force methods and complex mathematics. These intriguing problems, chosen almost exclusively from classical (non-quantum) physics, are posed in accessible non-technical language requiring the student to select the right framework in which to analyse the situation and decide which branches of physics are involved. The level of sophistication needed to tackle most of the two hundred problems is that of the exceptional school student, the good undergraduate, or competent graduate student. The book will be valuable to undergraduates preparing for 'general physics' papers. It is hoped that even some physics professors will find the more difficult questions challenging. By contrast, mathematical demands are minimal, and do not go beyond elementary calculus. This intriguing book of physics problems should prove instructive, challenging and fun.

Collection of nearly 200 unusual problems dealing with congruence and parallelism, the Pythagorean theorem, circles, area relationships, Ptolemy and the cyclic quadrilateral, collinearity and concurrency and more. Arranged in order of difficulty. Detailed solutions.

This comprehensive book is specially developed for the candidates of Delhi Police: Head Constable (Assistant Wireless Operator/Tele-Printer Operator) Recruitment Exam. This book includes Study Material, Test Paper (Solved) &

Previous Papers (Solved) for the purpose of practice of questions based on the latest pattern of the examination. Detailed Explanatory Answers have also been provided for the selected questions for Better Understanding of the Candidates. This is the first volume of a collection in three volumes named Mechanics for Olympiads. Throughout this collection, the author Renato Brito discusses Newton's laws of motion under a new perspective when compared to similar works by analyzing, through both the inertial and non-linear frames of reference, the whole of Newtonian dynamics in rectilinear and curvilinear movements, including more specific topics such as the influence of friction and geometric constraints. Brito's approach to Einstein's Equivalence Principle, done in an extremely instructive manner, is a fantastic tool for solving complex problems that involve Newtonian dynamics aiming to make these solutions both faster and more elegant. The chapter on Kinematics brings 150 problems that explore all kinds of movements in all possible classes of presentation, the vast majority of these being fully solved at the end of the book. The book includes a chapter on safety parabolas; a rare content to be found in entry-level works of Physics, as well as an appendix involving geometrical constraints. The understanding of Newtonian dynamics on both inertial and non-inertial frames of reference certainly gives students participating in Physics Olympiads a great advantage, while also adding to the preparation for highly competitive examinations. This book is suited for the self-teaching approach to Physics, containing over 300 solved and discussed problems in Physics, aiming to consolidate itself as a mandatory read for Physics Olympiads worldwide.
