meaningfully integrate data analytics into the financial accounting course, and are pleased to provide the following data analytics resources. Data Analytics and Decision-Making The text provides numerous discussions on how decision-makers are increasingly relying on data analytics to make decisions using accounting information. Accounting software systems collect vast amounts of data about a company's economic events as well as its suppliers and customers. Business decision-makers take advantage of this wealth of data by using data analytics to gain insights and therefore make more informed business decisions. Data analytics involves analyzing data, often employing both software and statistics, to draw inferences. As both data access and analytical software improve, the use of data analytics to support decisions is becoming increasingly common at virtually all types of companies"--

Litigation Services Handbook, 2015 Cumulative Supplement
The Role of the Financial Expert
John Wiley & Sons

Working capital is commonly understood as the fund needed to meet the day-to-day expenses of an enterprise. A finance manager finds that the funds for meeting these expenses get blocked in current assets. He, therefore, looks for liquidity support in net working capital (NWC), which is equivalent to the excess of current assets over current liabilities. A banker also looks at the size of NWC as the long-term stake of the business in funding the current assets. But for a production manager, liquidity is synonymous to uninterrupted supply of material inputs to the production lines. Similarly, for a marketing manager, if there is no production, his marketing outlets dry up despite demand in the market. While the finance manager discourages overstocking of inventory, the production manager and the marketing manager dread of being out of stock. In this conflict the goal of the organisation often takes a back seat. This book aims at resolving these conflicts by adopting a techno-financial approach to working capital management. In the previous edition a full chapter on Service Business: Risk Analysis and Working Capital Assessment was introduced to understand the nature of

service business and the risks associated with it followed by developing a model for assessment of working capital requirement. Whereas, in the Fourth Edition, a new chapter on Technological Progress, Innovations and Startups—A New Financing Methodology has been introduced to fill a long-felt gap in financing of emerging industries. Besides, the book is revised and updated extensively by incorporating the current researches in the field; particular mention can be made of Cash pooling system, Bullwhip effect and newer approaches to inventory recording system. Throughout the book, every concept is presented with worked-out examples and case studies for easy comprehension of the subject. The book is primarily addressed to postgraduate students majoring in Finance and to those pursuing professional courses in Accounts (CA) and Cost Accounting (ICWA). The book will also be very useful for practising finance executives, risk managers and also purchase/materials managers. TARGET AUDIENCE o MBA (Finance) o CA and ICWA Aspirants

Principles of Accounting leads the market with balanced, flexible content supported by an array of truly integrated print and technology supplements. Whether an instructor wants to present a user or procedural orientation, incorporate new instructional strategies, develop students' core skills and competencies, or integrate technology into the classroom, the 2002e edition provides a total solution. Because most students taking the introductory accounting course are business majors, the new edition focuses on the business relevance of accounting, emphasizing decision making and analysis.

This rigorous textbook introduces graduate students to the principles of econometrics and statistics with a focus on methods and applications in financial research.

Financial Econometrics, Mathematics, and Statistics introduces tools and methods important for both finance and accounting that assist with asset pricing, corporate finance, options and futures, and conducting financial accounting research. Divided into four parts, the text begins with topics related to regression and financial econometrics. Subsequent sections describe time-series analyses; the role of binomial, multi-nomial, and log normal distributions in option pricing models; and the application of statistics analyses to risk management.

In the last 20 years, the need for a financial expert to act as a witness and consultant to litigating attorneys has grown even more than litigation itself. Twenty years ago, few certified public accountants or economists offered litigation-related services; now, a large number devote much of their practice to this area. To be litigation service practitioners and accountants need to learn or enhance their litigation skills, including the fine points of their roles in trial preparation and testimony presentation, testimony presentation, deposition, direct examination, cross examination, understanding Sarbanes-Oxley rulings, and fraud investigations.

'Financial Accounting for Decision Makers' presents the key concepts of accounting without going into too much unnecessary technical detail. The book is aimed as 'users' of

accounting information, not 'preparers' of accounts.

Used in library schools worldwide, this standard text provides students with a thorough understanding of technical services. Updated and expanded, the eighth edition further emphasizes the rapidly changing environment in which technical services are conducted. The book covers all aspects of the field—from acquisitions to managing the cataloging department—with five new chapters. "Technical Services Issues" includes material related to physical space needs; "E-resources Issues" examines how the growth of e-materials impact technical services work; "Copy Cataloging" reflects the ever increasing need to be more efficient and also to save limited funds for technical services activities; "Overview and Decisions" addresses the issue of why and how the local OPAC has become a gateway to the universe of knowledge; and "Processing Materials" covers the activities involved in making sure items that go into a library's collection are properly identified as belonging to the library and where the item is physically located in the collection. All other chapters have been extensively rewritten and updated to reflect 2010 technical service functions and activities. Complete with helpful illustrations, statistics, and study guide questions, this text is a must for library and information science students!
