Central counterparties (CCPs) can offer significant benefits to a market. However, CCPs are also highly interconnected with financial institutions and markets and therefore too important to fail. The increased volumes cleared through CCPs and their increasing global scope, in particular in the OTC derivatives market, make it even more important that systemic risks related to CCPs are managed. This paper argues that the current set of international policy measures does partly address these risks, but that alternative policy measures are needed to reduce remaining systemic risks. For example, the paper recommends network analysis to be conducted by CCPs and authorities to gauge potential losses and suggests a common international approach to central bank services to help reduce the dependency of CCPs on services provided by commercial banks.

in accounting firms are investigated, as are the problems that arise from rating agencies providing consulting services and from universal banks combining commercial and investment banking. In the recent stock market collapse, confidence in the financial industry was shaken by numerous scandals. Beginning with Enron in 2001, scandals brought about the demise of prominent financial figures, damaged the reputation of premiere firms and destroyed the global accounting giant Arthur Andersen. Central to this crisis was the exploitation of conflicts of interest. Research analysts at investment banks were found to be distorting information at the behest of underwriting departments eager to promote new issues. Auditors appeared to sanction misleading accounting in order to gain business for the consulting side of their firms. Policy response in the United States was quick. Large fines were levied and regulators compelled the separation of financial security function, constraining financial conglomerates. But are these new regulations and safeguards adequate protection? What costs do they impose on the industry? This fifth title in the ICMP/CEPR series of Geneva Reports on the World Economy examines the problem of conflicts of interest in the financial system. Conflicts of interest lead to a decrease in information that makes it harder for the system to provide savers with the accurate, essential information that induces them to provide credit to borrowers. This study focuses on conflicts of interest that arise when a firm combines multiple lines of business, creating multiple interests. Conflicts between research and underwriting in investment banking and between auditing and consulting

in accounting firms are investigated, as are the problems that arise from rating agencies providing consulting services and from universal banks combining commercial and investment banking. Determining the appropriate remedy for a conflict is a challenge because the elimination of conflicts may also eliminate benefits from economies of scope. This study examines five generic remedies: market discipline, regulation for increased transparency, supervisory oversight, separation of financial activities by function, and socialization of the collection and distribution of information. The authors apply this framework to assess critically the Sarbanes-Oxley Act and the Global Settlement between American regulators and investment banks.

Finance and Financial Markets is a major text designed for introductory undergraduate, postgraduate and MBA courses in finance. It provides a comprehensive yet relatively non-technical introduction to modern day financial institutions, markets and instruments. The book analyses the institutions of the European financial market supervision and the challenges of financial markets. The current European supervisory structure for financial markets represents a major development in European supervisory history. Its operation however has to be explored and analysed critically. Has it gone far enough to provide a sufficiently comprehensive and resilient system to reduce or mitigate systemic risks and handle financial crises? Some claim it has gone too far already. Fresh and rigorous critical legal and economic analysis from an independent scholarly perspective are needed to assess whether the institutional design of the European supervisory

architecture has proved itself to be an efficient and effective model. This book discusses many dimensions of the structure and workings of the European system from various angles providing different dimensions. The book makes an important contribution to the limited literature on financial market supervision.

What happens in the City has never affected us more In this excellent guide, now fully revised and updated, leading financial journalist Philip Coggan cuts through the headlines, the scandals and the jargon to explain the nuts and bolts of the financial system. What causes the pound to rise or interest rates to fall? Which are the institutions that really matter? Why is it we need the Money Machine – and what happens when it crashes? Coggan provides clear and concise answers and shows why we should all be more familiar with a system we so intimately depend upon.

Financial Markets and Institutions is aimed at the first course in financial markets and institutions at both the undergraduate and MBA levels. While topics covered in this book are found in more advanced textbooks on financial markets and institutions, the explanations and illustrations are aimed at those with little or no practical or academic experience beyond the introductory-level finance courses. In most chapters, the main relationships are presented by figures, graphs, and simple examples. The more complicated details and technical problems related to in-chapter discussion are provided in appendixes to the chapters. Since the author team's focus is on return and risk and the sources of that return and risk in domestic and foreign financial markets

Saunders and Cornett's Financial Institutions Management: A Risk Management Approach 7/e provides an innovative approach that focuses on managing return and risk in modern financial institutions. The central theme is that the risks faced by financial institutions managers and the methods and markets through which these risks are managed are becoming increasingly similar whether an institution is chartered as a commercial bank, a savings bank, an investment bank, or an insurance company. Although the traditional nature of each sector's product activity is analyzed, a greater emphasis is placed on new areas of activities such as asset securitization, off-balance-sheet banking, and international banking.
