During the Gilded Age, Jekyll Island, Georgia, was one of the most exclusive resort destinations in the United States. Owned by the most elite and inaccessible social club in America, a group whose members included Rockefellers, Pulitzers, Vanderbilts, Goulds, and Morgans, this quiet refuge in the Golden Isles was the perfect winter getaway for the wealthy new industrial class of the snowbound North. In this delightful book, a companion volume to *The Jekyll Island Club: Southern Haven for America's Millionaires*, June Hall McCash focuses on the social club's members and the "cottages" they built near the clubhouse between 1888 and 1928. Illustrated with hundreds of never-before-published photographs from private family collections, *The Jekyll Island Cottage Colony* tells the stories of each home, the owners' connections with the island, and their interactions with one another. While quite grand by today's standards, these homes were relatively simple in design, built to enhance rather than subdue the island's wild beauty. The cottages of Jekyll's "Millionaire's Row" were not nearly as lavish as their Newport counterparts, but typified Victorian resort architecture from New England to Florida, ranging from Queen Anne to shingle to Spanish and Mediterranean styles. After the Jekyll Island Club disbanded following World War II, the state of Georgia acquired the island to ensure its conservation. Once threatened by years of neglect and disrepair, the elegant clubhouse has been converted to a hotel, and many of the gracious cottages have been restored to their original condition. *The Jekyll Island Cottage Colony* is a fascinating guide to a unique treasure of architectural history, as well as a personal look at golden days gone by.

Caravan & Motorhome Electrics is the totally rewritten successor of the original globally selling *Motorhome Electrics*. The book's content now also covers every aspect of designing, installing and fault finding of the electrics in fifth wheel and conventional caravans and camper trailers. The book explains how things work, and what they do (not what vendors claim they do). It shows how to dramatically improve charging performance, successfully install solar, and reduce energy draw of electric (especially) three-way fridges. Essentially it provides solutions proven to work, not suggestions that may work. The author shows how the ongoing move fully voltage controlled alternators necessitates dc-dc alternator charging. And that, post 2016, regulations are likely to limit or even preclude alternator charging with new vehicles. It covers the solutions in depth: i.e. solar, plus fuel cell's 24/7 power generation (light and compact yet silent and non-polluting (and now existing in LPG form), needing only a small battery for peak loads. As with all Collyn's books, the content is thoroughly researched, technically accurate, yet in plain English, plus explanatory illustrations, many of the author's own vehicles. The author's background includes automobile research, electronics and large scale magazine publishing (including founding the world's largest electronics magazine). He was technical editor of Australia's *The Bulletin* magazine in the 1980s - and has supplied Tech Notes to *The Wanderer* for a now 14 years.

One of America's leading anthropologists offers solutions to the perplexing question of why people behave the way they do. Why do Hindus worship cows? Why do Jews and Moslems refuse to eat pork? Why did so many people in post-medieval Europe believe in witches? Marvin Harris answers these and other perplexing questions about human behavior, showing that no matter how bizarre a people's behavior may seem, it always stems from identifiable and intelligible sources.

In January 2016, after a complete and expert restoration project lasting a decade, Flying Scotsman returned to the UK's mainline as one of the jewels in the National Railway Museum's collection.
