industry, this detailed guide shows readers how to successfully incorporate commodities into their portfolios. Created with both the professional and individual investor in mind, The Handbook of Commodity Investments covers a wide range of issues, including the risk and return of commodities, diversification benefits, risk management, macroeconomic determinants of commodity investments, and commodity trading advisors. Starting with the basics of commodity investments and moving to more complex topics, such as performance measurement, asset pricing, and value at risk, The Handbook of Commodity Investments is a reliable resource for anyone who needs to understand this dynamic market. Written by Philip Gotthelf, one of today's foremost futures trading authorities, TechnoFundamental Trading provides a fresh and thoroughly modern approach to fundamental analysis. By synthesizing aspects of technical analysis with fundamental analysis, Gotthelf has created a unique and powerful approach to market forecasting and trade selection. Indeed, the technofundamental approach is one of the best methods ever devised to identify long-term trends and major turning points. The technofundamental method can accomplish all of the following: identify major price trends before they begin; distinguish between a "technical market reaction" and a significant top or bottom; understand the relationship between seemingly unrelated phenomena, such as grain prices and interest rates or currencies and gold; distinguish between "reactionary fundamentals" with "prospective fundamentals"; identify long-term economic cycles; analyze supply and demand using new "technical approaches; and interpret technical indicators in light of market fundamentals. Unlike many technical methods, the technofundamental approach does not negate a trader's power of analysis and interpretation. Indeed, technofundamentals place a premium on the trader's ability

to interpret the interplay between fundamental and technical forces. For traders with superior analytical and creative abilities, the technofundamental method will provide a big edge over purely technical traders.

The U.S. stock market has been transformed over the last twenty-five years. Once a market in which human beings traded at human speeds, it is now an electronic market pervaded by algorithmic trading, conducted at speeds nearing that of light. High-frequency traders

participate in a large portion of all transactions, and a significant minority of all trade occurs on alternative trading systems known as “dark pools.” These developments have been widely criticized, but there is no consensus on the best regulatory response to these dramatic changes. The New Stock Market offers a comprehensive new look at how these markets work, how they fail, and how they should be regulated. Merritt B. Fox, Lawrence R. Glosten, and Gabriel V. Rauterberg describe stock markets’ institutions and regulatory architecture. They draw on the informational paradigm of microstructure economics to highlight the crucial role of information asymmetries and adverse selection in explaining market behavior, while examining a wide variety of developments in market practices and participants. The result is a compelling account of the stock market’s regulatory framework, fundamental institutions, and economic dynamics, combined with an assessment of its various controversies. The New Stock Market covers a wide range of issues including the practices of high-frequency traders, insider trading, manipulation, short selling, broker-dealer practices, and trading venue fees and rebates. The book illuminates both the existing regulatory structure of our equity trading markets and how we can improve it.

By assessing what your personal biases are, you can determine how they influence your ultimate success-or failure-and then adjust your trading strategies accordingly. Written by an expert in the field who has been featured in Futures, Worth, Success, and other prominent publications, *New Trading Dimensions* takes the latest in scientific knowledge about human behavior and applies it directly to the fields of stock and commodity investing and trading.
