Why have we failed to address the crisis of hunger in the twenty-first century? In 2000 the world's leaders and experts agreed that the eradication of hunger was the essential task for the new millennium. Yet in the last decade the price of wheat, soya and rice have spiraled, seen by many as the cause of the widening poverty gap and political unrest from the Arab Spring to Latin America. This food crisis has condemned the bottom billion of the world's population who live on less than \$1 a day to a state of constant hunger. In *The Reproach of Hunger*, leading expert on humanitarian aid and development David Rieff goes in search of the causes of this food security crisis, as well as the reasons behind the failures to respond to the disaster. In addition to the failures to address climate change, poor governance and misguided optimism, Rieff cautions against the increased privatization of aid, with such organizations as the Gates Foundation spending more than the World Health Organization on food relief. The invention of the celebrity campaigner—from Bono to Jeffrey Sachs—have championed business-led solutions that have robbed development of its political urgency. The hope is that the crisis of food scarcity can be solved by a technological innovation. In response Rieff demands that we rethink the fundamental causes of the world's grotesque inequalities and see the issue as a political challenge we are all failing to confront.

The 2015-2016 school year marks the first administration of the redesigned PSAT, which is composed of two sections: (1) Evidence-based Reading and Writing (EBRW) and (2) Math. This memorandum presents results of 2015-2016 Grade 10 PSAT participation and performance of Montgomery County Public Schools (MCPS) students. Among 10,859 MCPS first-time Grade 10 students, 91.5 percent of them participated in the redesigned PSAT, which was 3.2 percentage points higher than the participation rate of first-time Grade 10 students who took the PSAT in 2014-2015 (88.3 percent). Among first-time Grade 10 students who also reported themselves as Grade 10 when they took the PSAT, the average score was 979 of 1,520--40 points higher than the national sample. Slightly more than one half of first-time Grade 10 students were identified through the 2015-2016 PSAT to have AP potential on one or more AP exams related to core subjects. The attached tables provide additional data about the 2015-2016 Grade 10 PSAT participation and performance, and identification of AP potential by school and student group.

Prior to 1862, when the Department of Agriculture was established, the report on agriculture was prepared and published by the Commissioner of Patents, and forms volume or part of volume, of his annual reports, the first being that of 1840. The risk of athletes sustaining concussion while participating in professional team sports raises two serious concerns both nationally and internationally. First, concussion in sport carries a public health risk, given that injured athletes may have to deal with significant long-term medical complications, with some of the worst cases resulting in Chronic Traumatic Encephalopathy (CTE). Secondly, sports governing bodies are now exposed to the risk of financial and reputational damage as a consequence of legal proceedings being filed against them. A good example of this, among many other recent examples, is the case of the United States of America's National Football League (NFL), the governing body for American football, which, in 2015, committed to pay US\$ 1 billion to settle the class action filed by its former professional players. This book examines how to most efficiently reduce these public health and legal risks, and proposes a harmonised solution across sports and legal systems.

How an alliance of the labor and environmental movements used law as a tool to clean up the trucking industry at the nation's largest port. In *Blue and Green*, Scott Cummings examines a campaign by the labor and environmental movements to transform trucking at America's largest port in Los Angeles. Tracing the history of struggle in an industry at the epicenter of the global supply chain, Cummings shows how an unprecedented "blue-green" alliance mobilized to improve working conditions for low-income drivers and air quality in nearby communities. The campaign for "clean trucks," Cummings argues, teaches much about how social movements can use law to challenge inequality in a global era. Cummings shows how federal deregulation created interrelated economic and environmental problems at the port and how the campaign fought back by mobilizing law at the local level. He documents three critical stages: initial success in passing landmark legislation requiring port trucking companies to convert trucks from dirty to clean and drivers from contractors to employees with full labor rights; campaign decline after industry litigation blocked employee conversion; and campaign resurgence through an innovative legal approach to driver misclassification that realized a central labor movement goal—unionizing port truckers. Appraising the campaign, Cummings analyzes the tradeoffs of using alternative legal frameworks to promote labor organizing, and explores lessons for building movements to regulate low-wage work in the "gig" economy. He shows how law can bind coalitions together and split them apart, and concludes that the fight for legal reform never ends, but rather takes different turns on the long road to justice.
