Bergin and Bergin's CHILD AND ADOLESCENT DEVELOPMENT IN YOUR CLASSROOM: CHRONOLOGICAL APPROACH, prepares future teachers to create an environment that promotes optimal development for all children.

Addressing concerns stated in NICHD and NCATE's joint report (i.e., that child development courses need to offer more realistic illustrations of development concepts or better tie concepts to the classroom), the book helps college instructors meet the challenge of translating up-to-date research into realistic, high-quality classroom practice. It uses attention-grabbing real-world vignettes, anticipates questions that teachers might ask, provides an easy-to-follow format, and focuses on topics of interest and relevance to teachers, including classroom discipline, aggression, emotion regulation, and many others. This accessible new text also places a strong emphasis on diversity among children, and is ideal for teachers who will be working with children from infancy through high school. MATH AND SCIENCE FOR YOUNG CHILDREN, Eighth Edition, introduces readers to engaging math and science experiences for early childhood and early elementary education programs, and provides an organized, sequential approach to creating a developmentally appropriate math and science curriculum. The content aligns with key guidelines and standards: The National Association for the Education of Young Children's (NAEYC) Professional Preparation Standards (2010); Developmentally Appropriate Practice (DAP) guidelines; Common Core Mathematics Standards; and Next Generation Science Standards (NGSS). The book also addresses STEM/STEAM and the essential domains of child growth and development during the crucial birth-through-eight age range. A valuable resource for the student/future teacher, working professional, or involved parent, MATH AND SCIENCE FOR YOUNG CHILDREN emphasizes the interrelatedness of math and science and how they can be integrated into all other curriculum areas. There is now strong evidence demonstrating that the brain simulates action and other functions. Such action simulation can be evoked through conscious mental rehearsal of movement or imagery, but also through passive action observation watching movements in others. Furthermore, there is evidence to suggest that mental rehearsal of movement, or mental practice, can produce improvements normally attributed to practising actual movements. It is currently assumed that such improvements are due to neural activation associated with action simulation. However the neuroscience of mental practice efficacy is still poorly understood. The aim of this research topic is to clarify the underlying mechanisms of mental practice, bringing evidence from cognitive neuroscience, experimental neuropsychology, sport and movement science, and clinical neurology. It also attempts to address confusion regarding the concepts of imagery and observation, which has hampered the progression of mental practice research both scientifically and applied. As well as reviews, theoretical, and position articles, this research topic includes original neuroimaging, experimental, and patient research addressing, among others, the following issues. Neuroimaging studies provide strong evidence for action simulation, but the link to behavioural change and functional outcome is weak. What is the evidence that mental practice efficacy is driven by neuroplasticity processes evoked by action simulation? This research topic includes contributions on neural correlates and behaviour with regards to imagery and action observation. Much of the mental practice efficacy evidence comes from longstanding research within sport science. However, what does mental practice entail in these contexts, and to what extent is it compatible with the cognitive neuroscience perspective of action simulation? This research topic will include contributions that consider both evidence and concepts with regards to imagery and action observation, in an attempt to build an interdisciplinary consensus on the nature and application of mental practice. Mental practice is perceived as a promising motor rehabilitation technique, but critically there is lack of clarity or consensus on what mental practice treatment should entail. It is also not clear what are the most appropriate outcomes to measure imagery ability and cognitive or behavioural change following mental practice. A further important issue that needs consideration as part of this research topic is dosage, as it is currently unclear how much mental practice is appropriate and whether this depends on patient variables such as age, cognitive functioning, motor function, or pathophysiology.

This book provides a unique examination on the ways in which educating the whole child in the community school serves to ameliorate the conditions of poverty and obstacles to learning faced by students. Using a case study approach the book will highlight the successful journey of one school that transformed itself into a community school.

Nelson Handwriting contains six workbooks for infants and five full colour pupil books, one for each year group. The books are sequenced for progression and contain three levels of differentiation designed for a wide range of abilities. The books introduce, teach and develop the technical aspects of key handwriting skills in meaningful, relevant language contexts. They have been organized in such a way that you can teach handwriting to the whole class, groups and individuals. They contain increased provision for the early years, introducing exit flicks from the beginning, provides structured units which offer a teaching focus point followed by opportunities for practice and gives support and extension copymaster options. They contain improved assessment provision which helps to assess progress and encourages pupils to monitor their own development.

This book focuses on the role of cultural background in Korean public schools, and provides essential insights into how Korean teachers perceive and respond to the transition of their classroom situations with Korean language learners. It reveals the perspectives and the practices of Korean teachers, especially with regard to multicultural students who struggle with language barriers when learning mathematics. The information provided is both relevant and topical, as teaching mathematics to linguistically and culturally diverse learners is increasingly becoming a worldwide challenge.

This book presents basic introductory material on developing and managing curriculum for early childhood education. Designed as a resource for beginning students and as a reference manual for experienced teachers, the text presents focused, sequential coverage on curriculum for young children--excluding potentially confusing details about related topics that are covered in longer books. Discussions cover such important topics as similarities in existing approaches to early childhood education, how to meet children's needs through curriculum, and planning and organizing curriculum. The Second Edition features enhanced standards coverage, increased material on diversity and multiculturalism, video integration, new information on how child development affects curriculum, and more. CURRICULUM FOR YOUNG CHILDREN also helps students and teachers assess the wealth of activity ideas available from other textbooks, resource manuals, and websites. Authored by nationally recognized scholar and behavioral consultant Dr. John W. Maag, this book focuses primarily on students' observable behaviors and the environmental factors that affect their expression. As Maag points out, behavior management is probably one of the most misunderstood concepts in education. Written in a very accessible style, this book demystifies stereotypical beliefs and misconceptions regarding the use of reinforcement, punishment, and self-control. Maag offers clear, but detailed descriptions of proven intervention techniques, supplemented by a range of step-by-step guidelines, sample forms, charts, graphs, and illustrations that assist teachers in implementing the techniques. Although the techniques described in the book are based on a sound theoretical and empirical foundation, the author limits the use of technical jargon and infuses real-life examples and case studies that clarify and illuminate the presentation.
