Reflecting the 2010 Emergency Cardiovascular Care guidelines, ACLS Study Guide, 4th Edition offers a complete, full-color overview of advanced cardiovascular life support. An easy-to-read approach covers everything from airway management and rhythms and their management to electrical therapy, acute coronary syndromes, and acute stroke. In addition to the latest ACLS treatment algorithms, this edition includes new case studies, new photos and illustrations, a heart rate ruler, and a handy ACLS quick-reference card for use in the field. Written by Barbara Aehlert, ACLS Study Guide is the official textbook for the American Safety & Health Institute ACLS certification course. A pretest and posttest -- each containing 50 questions with answers and rationales -- allow you to check your knowledge prior to and after your study. Chapter objectives preview the main points in each chapter. Stop and Review sections at the end of the chapters help you remember the most important information. ACLS Pearls boxes offer key points and useful tips for clinical practice. Keeping it Simple boxes provide essential information in a clear and concise manner. Ten case studies present real-life clinical situations, allowing you to make decisions based on information in the Preparatory section. Consistent format of case studies includes Objective, Skills to Master, Rhythms to Master, Medications to Master, Related Text Chapters, Essential Actions, and Unacceptable Actions. A heart rate ruler is included to help you interpret ECGs. 4 x 6 pocket-size quick-reference card contains key ACLS algorithms for field use. 100 new and updated photos and illustrations show key ACLS procedures and equipment. Pharmacological interventions are integrated into the chapters for a more cohesive learning experience. New streamlined approach reduces the number of pages and simplifies the information you need to know.

Authored by the National Association of EMS Educators (NAEMSE) in partnership with leading experts in the EMS field, FOUNDATIONS OF EDUCATION: AN EMS APPROACH provides new and practicing instructors EMS specific tools and techniques to design, deliver and evaluate learning. Focused on enhancing the learning experience, this book guides instructors to legally and ethically write objectives, prepare lesson plans, evaluate learning, and deliver education in the classroom, field, and clinical settings. In addition, FOUNDATIONS OF EDUCATION: AN EMS APPROACH provides the groundwork from which instructors and program directors can work collaboratively to develop instructionally sound education programs that meet the National EMS Education Standards, and exceed State and National Accreditation requirements. This New American Red Cross CPR/AED for the Professional Rescuer Participant's Manual and course reflect changes based on the 2005 Consensus on Science for CPR and Emergency Cardiovascular Care (ECC) and the Guidelines 2005 for First Aid. Changes to this program and manual include simplifications to many of the CPR skill sequences, which helps improve retention. There have also been changes to help improve the quality of CPR. The integration of CPR skills into the operation of AEDs had changed to help improve survival from sudden cardiac arrest. Professional rescuers are now trained to use AEDs on adults and children. Information has been updated and added to this program to help professional rescuers administer epinephrine, aspirin and fixed-flow-rate oxygen. The skills learned in this course include adult, child and infant rescue breathing, conscious and unconscious choking, CPR, two-rescuer CPR and adult and child AED. Additional training can be added to this course including bloodborne pathogens training and emergency oxygen administration. While the skills and knowledge that professional rescuers use are increasing, this training will help you meet your most important responsibility as a professional rescuer- the responsibility to save lives.

What you will learn from this book: - Recognition of Basic Dysrhythmias - Team Resuscitation Concepts - What Actually Happens in Mega Codes - BLS & ACLS Surveys - Acute Coronary Syndrome Management - Stroke Management - Plus 160 Review Questions

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

Economic volatility has come into its own after being treated for decades as a secondary phenomenon in the business cycle literature. This evolution has been driven by the recognition that non-linearities, long buried by the economist's penchant for linearity, magnify the negative effects of volatility on long-run growth and inequality, especially in poor countries. This collection organizes empirical and policy results for economists and development policy practitioners into four parts: basic features, including the impact of volatility on growth and poverty; commodity price volatility; the financial sector's dual role as an absorber and amplifier of shocks; and the management and prevention of macroeconomic crises. The latter section includes a cross-country study, case studies on Argentina and Russia, and lessons from the debt default episodes of the 1980s and 1990s.

New 7th Edition! Powerful resource for interactive, simulation-based teaching and learning! The Neonatal Resuscitation Program (NRP) is an educational program jointly sponsored by the American Academy of Pediatrics (AAP) and the American Heart Association (AHA). The course is designed to teach an evidence-based approach to resuscitation of the newborn to hospital staff who care for newborns at the time of delivery. New in the 7th edition! Text updated to reflect the 2015 AAP/AHA Guidelines for Cardiopulmonary Resuscitation and Emergency Cardiovascular Care of the Neonate Two new chapters added covering post-resuscitation care and preparing for resuscitation 140+ new full-color photographs replacing most line drawings

Why Critical Care Evolved METs? In early 2004, when Dr. Michael DeVita informed me that he was considering a textbook on the new concept of Medical Emergency Teams (METs), I was surprised. At Presbyterian-University Hospital in Pittsburgh we introduced this idea some 15 years ago, but did not think it was revolutionary enough to publish. This, even though, our fellows in critical care medicine training were all involved and informed about the importance of "Condition C (Crisis)," as it was called to distinguish it from "Condition A (Arrest)." We thought it absurd to intervene only after cardiac arrest had occurred, because most cases showed prior deterioration and cardiac arrest could be prevented with rapid team work to correct precluding problems. The above thoughts were logical in Pittsburgh, where the legendary Dr. Peter Safar had been working since the late 1950s on improving current resuscitation techniques, first ventilation victims of apneic from drowning, treatment of smoke inhalation, and so on. This was followed by external cardiac compression upon demonstration of its efficiency in cases of unexpected sudden cardiac arrest. Dr. Safar devoted his entire professional life to improvement of cardiopulmonary resuscitation. He and many others emphasized the importance of getting the CPR team to out-of-hospital victims of cardiac arrest as quickly as possible.
