Home Health Aide Training Manual Jones & Bartlett Learning

The health care industry offers many opportunities for a challenging and fulfilling career with only two years of post-high school education. Workers in the hospital and home health fields provide essential care around the clock to some of the most vulnerable patients and the elderly. Readers explore a range of career options within these fields, including practical or visiting nurse, social service aide, home health aide, and medical equipment technician, among others. Clear, accessible text and evocative photos give a sense of each job's responsibilities and work environment. Useful information about training requirements, certification and licensing tests, and paths to advancement empower readers to pursue their goals.

Individuals with disabilities, chronic conditions, and functional impairments need a range of services and supports to keep living independently. However, there often is not a strong link between medical care provided in the home and the necessary social services and supports for independent living. Home health agencies and others are rising to the challenges of meeting the needs and demands of these populations to stay at home by exploring alternative models of care and payment approaches, the best use of their workforces, and technologies that can enhance independent living. All of these challenges and opportunities lead to the consideration of how home health care fits into the future health care system overall. On September 30 and October 1, 2014, the Institute of Medicine and the National Research Council convened a public workshop on the future of home health care. The workshop brought together a spectrum of public and private stakeholders and thought leaders to improve understanding of the current role of Medicare home health care in supporting aging in place and in helping high-risk, chronically ill, and disabled Americans receive health care in their communities. Through presentations and discussion, participants explored the evolving role of Medicare home health care in caring for Americans in the future, including how to integrate Medicare home health care into new models for the delivery of care and the future health care marketplace. The workshop also considered the key policy reforms and investments in workforces, technologies, and research needed to leverage the value of home health care to support older Americans, and research priorities that can help clarify the value of home health care. This summary captures important points raised by the individual speakers and workshop participants.

It is my hope that this text, when properly used will be of great benefit to the individual aide or aide in training in mastering the required skills that would make the individual a good home health aide. The book has been specially tailored as a teaching tool for home health aides. The book has two sections, the tutorial section one and the practical hands on section two. The second section is a good aide or good training tool for practical demonstration purposes. For the purpose of understanding only, a home health aide does not have to be a Certified Nurses Aide. As a result this book can be used to train and prepare an individual to function in the capacity of a home health aide. The agency must prepare a set of standardized tests for the aides to ensure that the individual have fully internalized the reaching and training that they have been put through. This book further addresses the rule and regulation (federal and State) that the home health aide must be familiar with. This book is an excellent tool for the home health aide. I strongly encourage all individual who practice and plans to practice as an aide in the home health field to read this book.

Long-term care services include a broad range of services that meet the needs of frail older people and other adults with functional limitations. Long-Term care services provided by paid, regulated providers are a significant component of personal health care spending in the United States. This report presents descriptive results from the first wave of the National Study of Long-Term Care Providers (NSLTCP), which was conducted by the Centers for Disease Control and Preventions National Center for Health Statistics (NCHS). This report provides information on the supply, organizational characteristics, staffing, and services offered by providers of long-term care services; and the demographic, health, and functional composition of users of these services. Service users include residents of nursing homes and residential care communities, patients of home health agencies and hospices, and participants of adult day services centers.

Litigation is rampant in the home health field - and it's not just about billing and coding. It's also about other practices that could lead to compliance problems, such as substandard employment practices or failing to run background checks. A lawsuit against your agency could come completely out of left field. But you can avoid getting blind-sided and protect your agency. **Corporate Compliance in Home Health: Establishing a Plan, Managing the Risks** gives home health care providers practical, down-to-earth standards for controlling and preventing losses growing out of corporate compliance. With this new resource from Aspen, get an up-to-date and easy-to-understand review of the law of corporate compliance, find out how the new OIG (Office of the Inspector General of HCFA) model compliance guidance for hospitals impacts home health, and uncover where your agency is at risk. You'll find out what to do if and when your agency comes under investigation, and get important, timely federal reference material from the GAO to HHS, and key parts of the Federal Sentencing Guidelines.

"Barnow, Trutko, and Piatak focus on whether persistent occupation-specific labor shortages might lead to inefficiencies in the U.S. economy. They describe why shortages arise, the difficulty in ascertaining that a shortage is present, and how to assess strategies to alleviate the shortage. Four occupations are used as test cases: 1) special education teachers, 2) pharmacists, 3) physical therapists, and 4) home health and personal care aides. For each of these occupations the authors summarize evidence that reveals whether it is currently or has recently experienced a labor shortage and suggest possible ways to alleviate the shortage if it is present. The authors close with a chapter discussing their conclusions and potential uses for occupational shortage data, including in helping determine immigration policy. They also discuss the limited nature of the occupational data currently collected by the Bureau of Labor Statistics and how the federal and state governments could expand their data collection efforts to assist policy formation."--Publisher's website.
