Conogethes is a group of moths distributed in Austral-Asian region from India to New Guinea, the Solomon Islands and Australia. The moths are also found in Hawaii and Great Britain. Conogethes is mostly known for the economic impact of its larvae on agricultural crops. Substantial research has been undertaken in order to understand the biology of these harmful insects and to develop strategies to confine their impact. Research on chemical communication between males and females via sex pheromones is in progress. Recent research has also focused on the acoustic communication of Conogethes. The moths can feed on more than 200 plants in diversified habitats. The borer moths have become major pest on Horticultural, Agricultural, Avenue trees and forest trees. It's a pest of Quarantine importance as it has been found in Exportable commodities. The book contains 22 chapters from a dozen countries. The authors are from China, Vietnam, Australia, Sri Lanka, Malaysia, Norway etc. This is the first book on the pest globally where interesting insights are provided. This is one of the book of its kind on single pest dealing with almost all aspects of its biology and management on cultivated crops.

This book describes in general how the chemosensory systems of fish function at various levels. In many ways, fish are typical vertebrates differing only slightly from other vertebrates including humans. In other ways, their aquatic environment imposes strict requirements or offers unique opportunities which have resulted in some unusual functions having no counterpart in higher vertebrates. This new volume is necessitated by advances in many vital areas as the field of chemical senses continues to grow at a rapid pace. Most significant is the application of the contemporary electrophysiological technique of patch-clamping, recognition of a second messenger system in chemosensory transduction processes and the identification of hormonal pheromones in fish reproductive behaviour. The last major synthesis of our knowledge about fish chemoreception, Chemoreception in Fishes, was published ten years ago (Elsevier, Amsterdam, 1982). In that volume four aspects of fish chemoreception, Le. morphology of the peripheral chemoreceptors, primary sensory processes, roles in behaviour, and its interactions with environment, were discussed. This book is intended to be helpful to students, scientists and aquaculturalists not only as a source book but also as a textbook on chemical senses.

Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Identifies the polar reactions that are frequently employed in carbogenic synthesis. While touching on retrosynthetic analysis, it's emphasis is on the exploitation and manipulation of the electronic properties of synthons in response to synthetic necessity.

And for riding gear or casual wear, see the Drag Specialties/Parts Unlimited Helmet/Apparel catalog. Combine all three catalogs for the most complete powersports resource of 2014.

The Great Race recounts the exciting story of a century-long battle among automakers for market share, profit, and technological dominance—and the thrilling race to build the car of the future. The world's great manufacturing juggernaut—the \$3 trillion automotive industry—is in the throes of a revolution. Its future will include cars Henry Ford and Karl Benz could scarcely imagine. They will drive themselves, won't consume oil, and will come in radical shapes and sizes. But the path to that future is fraught. The top contenders are two traditional manufacturing giants, the US and Japan, and a newcomer, China. Team America has a powerful and little-known weapon in its arsenal: a small group of technology buffs and regulators from California. The story of why and how these men and women could shape the future—how you move, how you work, how you live on Earth—is an unexpected tale filled with unforgettable characters: a scorned chemistry professor, a South African visionary who went for broke, an ambitious Chinese ex-pat, a quixotic Japanese nuclear engineer, and a string of billion-dollar wagers by governments and corporations. "To explain the scramble for the next-generation auto—and the roles played in that race by governments, auto makers, venture capitalists, environmentalists, and private inventors—comes Levi Tillemann's The Great Race...Mr. Tillemann seems ideally cast to guide us through the big ideas percolating in the world's far-flung workshops and labs" (The Wall Street Journal). His account is incisive and riveting, explaining how America bounced back in this global contest and what it will take to command the industrial future.
