From its invention in Europe at the end of the nineteenth century, the automobile crisscrossed the world, completely took over the cities, and became a feature of daily life. Considered basic to the American lifestyle, the car reflected individualism, pragmatism, comfort, and above all modernity. In Latin America, it served as a symbol of distinction, similar to jewelry or fine clothing. In *The Cultural Life of the Automobile*, Guillermo Giucci focuses on the automobile as an instrument of social change through its “kinetic modernity” and as an embodiment of the tremendous social impact of technology on cultural life.

Material culture—how certain objects generate a wide array of cultural responses—has been the focus of much scholarly discussion in recent years. The automobile wrought major changes and inspired images in language, literature, and popular culture. Focusing primarily on Latin America but also covering the United States, Europe, Asia, and Africa, Giucci examines how the automobile was variously adapted by different cultures and how its use shaped and changed social and economic relationships within them. At the same time, he shows how the “automobilization” of society became an essential support for the development of modern individualism, and the automobile its clearest material manifestation.

How the use of nonpolluting, zero-emission hydrogen as fuel could be the cornerstone of a new energy economy. Hydrogen is the most abundant element in the universe. An invisible, tasteless, colorless gas, it can be converted to nonpolluting, zero-emission, renewable energy. When burned in an internal combustion engine, hydrogen produces mostly harmless water vapor. It performs even better in fuel cells, which can be 2.5 times as efficient as internal-combustion engines. Zero-emission hydrogen does not contribute to CO₂-caused global warming. Abundant and renewable, it is unlikely to be subject to geopolitical pressures or scarcity concerns. In this new edition of his pioneering

book *Tomorrow's Energy*, Peter Hoffmann makes the case for hydrogen as the cornerstone of a new energy economy. Hoffmann covers the major aspects of hydrogen production, storage, transportation, fuel use, and safety. He explains that hydrogen is not an energy source but a carrier, like electricity, and introduces the concept of “hydricity,” the essential interchangeability of electricity and hydrogen. He brings the hydrogen story up to date, reporting on the latest developments, including new hydrogen and fuel-cell cars from GM, Daimler, BMW, Honda, and Toyota. He describes recent political controversies, including Obama administration Energy Secretary (and Nobel laureate in Physics) Steven Chu's inexplicable dismissal of hydrogen—which puts him at odds with major automakers, German Chancellor Angela Merkel, and others. Our current energy system is a complex infrastructure, and phasing in hydrogen will take effort and money. But if we consider the real costs of fossil fuels—pollution and its effects, international tensions over gas and oil supplies, and climate change—we would be wise to promote its development.

EJ 'Ted' Cutting was not only Aston Martin's most successful Chief Race Car Design Engineer, but was also an innovator with influential force on the worldwide automotive industry. Originating from a limited edition hardback version, this eBook was produced in celebration of the 60th anniversary of Aston Martin winning the World Sports Car Championship for Britain with the all-conquering DBR1 designed, engineered and created by Ted himself. Rather than a traditional biography of his life, Ted wanted his book to be rather less scripted and informal; it was therefore initially adapted from a number of recorded conversations between himself and Aston Martin Heritage Trust members Stuart Bailey and Brian Joscelyne - the title being an obvious choice considering this! In addition to the in-depth telling of a legendary period in British motorsport by a man at the centre of it all, the book also sees Ted clarify a number of details which have in the past been incorrectly reported. Unusually it also contains all his published documents and access to a 90 minute video of his unique lecture on 'Racing Astons' to further endorse his story. Although the original hardback edition of this book was produced only in a limited run, Ted's wish was to make

the complete book available to a much wider audience, now possible through the internet; as an engineer always working at the cutting edge of technology, he would appreciate the benefits of information sharing in the digital age. As well as being of interest to fans of Aston Martin and of motorsports in general, the book is a compelling read for any student of automotive design and engineering; after all, progress is about standing on the shoulders of giants - and in the field of race car design, few individuals ever reach the colossal heights achieved by Ted Cutting.

Chinese production of automobiles rose from 42,000 cars per year in 1990 to 2.3 million in 2004; the number of passenger vehicles on the road doubled every two and a half years through the 1990s and continues to grow. In *China Shifts Gears*, Kelly Sims Gallagher identifies an unprecedented opportunity for China to "shift gears" and avoid the usual problems associated with the automobile industry—including urban air pollution caused by tailpipe emissions, greenhouse gas emissions, and high dependence on oil imports—while spurring economic development. This transformation will only take place if the Chinese government plays a leadership role in building domestic technological capacity and pushing foreign automakers to transfer cleaner and more energy-efficient technologies to China. If every new car sold in China had the cleanest and most energy-efficient of the automotive technologies already available, urban air pollution could be minimized, emissions of climate-altering greenhouse gases would be lower than projected, and the Chinese auto industry would

continue to flourish and contribute to China's steady economic development. But so far, Gallagher finds, the opportunity to shift gears has been missed. Gallagher looks in detail at three U.S.-Chinese joint ventures: Beijing Jeep, Shanghai GM, and Chang'An Ford. These case studies are based on original research, including interviews with 90 government officials, industry representatives, and experts in both countries. Drawing from the case studies, Gallagher explores the larger issues of the environmental and economic effects of technology transfer in the automobile industry and the policy implications of "leapfrogging" to more advanced technology.

A vibrant personality that others notice, and the people we become to ourselves are often a culmination of factors in direct correlation to the experiences we have. The qualitative level of the experiences are also often hinged to our relative environment. Throughout the journey of life some individuals have more profoundly varied encounters than others, some are as innumerable as the sand grains. Thomas was such a young man, whom against his fears, lived within the boundaries of the tough and hard, and made changes along the way to define and refine the soul he is.

The US and its citizens are addicted to debt much as a drug addict is hooked on heroin. Unless the US achieves rehabilitation, this failing alone will ensure that the USA will continue to decline relative to many other countries. Liberals are now firmly in control in the USA. In this political climate, there is no indication that our debt will not continue to increase dramatically. The modus operandi is to give a short term fix to all problems by dramatically increasing debt. The present financial crisis, itself caused by excessive debt is being fixed by even more debt. The burden for the few who pay taxes will become increasingly onerous and increasingly unacceptable for future generations. The best and the brightest will turn away from the USA, increasing the US relative rate of decline. Much that has been achieved in the USA since the end of the Second World

War has been achieved by people not born in the USA. In future, the USA increasingly will not be the destination of choice for people with the most to offer. Instead it is the destination for illegal immigrants at the other end of the social scale. The USA is considered ugly by the rest of the world because it makes no effort to control its gluttony. In the USA, 25% of the world's energy is consumed by 5% of the world population. The USA also leads the world in obesity and in debt. The USA does not pay for its insatiable consumption. Despite its great opportunities, the USA has a high percentage of free loaders who pay little or no income taxes. They have become home owners through debt that they have not worked and saved to afford, through policies of US Liberal government. The ensuing tsunami is now engulfing the less fortunate people throughout the world, who are genuinely poor and are now having to suffer the consequences of our worthless paper debt instruments, while the USA takes on huge new debt to continue to feed its addiction instead of facing up to the reality of living within its means.

Marketing for Growth is a guide to how the marketing function within a business can and should become its most important driver of growth. Marketers play a crucial role in generating revenue and they can play an equally important role in how revenues translate into profit. Growth is also about becoming a better business by being smarter or more efficient, and growing in a sustainable way. This involves developing and

improving products, processes and standard of service. Marketers have their ear to the ground and therefore are often the first to pick up on changing customer needs and behaviour and the forces at play in markets. This increases the impact marketing should have on all those aspects of a business. The book is in three parts: the first part explores who are the most valuable customers, the second the most effective ways to drive revenue growth and the third the best ways to improve profitability. It combines insight and practical guidance, and is supported by a wealth of hard data and anecdotal evidence based on the experiences of a wide range of business in Britain, America, Europe and Asia. Among the firms featured are Amazon, China Mobile, Dove, Goldman Sachs, Haier, ING Direct, Lenovo, Mini, Procter & Gamble, Red Bull, Target, Twitter, Virgin and Zara.
