People holding HVAC jobs are concerned with climate-control systems that keep individuals warm in the winter, cool in the summer, and breathing the freshest air possible year-round. Those who enjoy working with their hands and solving problems can find a challenging position in the HVAC industry. Whether it is as an installer, mechanic, master technician, drafter, design engineer, or refrigeration maintenance technician, readers learn that if they choose to work in these jobs they will have salaries, compensation packages, and other benefits that are among the highest and best in the construction trades. Students will discover that they can jump-start a career in high school and are offered an in-depth look at how to acquire the pertinent skills, knowledge, apprenticeships, certifications, and employment in a field that is always in need of well-trained, enthusiastic workers. It also provides an overview of education options, including distance learning, community colleges, and vo-tech schools and an interview with an HVAC engineer.

From bestselling writer David Graeber—"a master of opening up thought and stimulating debate" (Slate)—a

powerful argument against the rise of meaningless, unfulfilling jobs...and their consequences. Does your job make a meaningful contribution to the world? In the spring of 2013, David Graeber asked this question in a playful, provocative essay titled "On the Phenomenon of Bullshit Jobs." It went viral. After one million online views in seventeen different languages, people all over the world are still debating the answer. There are hordes of people—HR consultants, communication coordinators, telemarketing researchers, corporate lawyers—whose jobs are useless, and, tragically, they know it. These people are caught in bullshit jobs. Graeber explores one of society's most vexing and deeply felt concerns, indicting among other villains a particular strain of finance capitalism that betrays ideals shared by thinkers ranging from Keynes to Lincoln. "Clever and charismatic" (The New Yorker), Bullshit Jobs gives individuals, corporations, and societies permission to undergo a shift in values, placing creative and caring work at the center of our culture. This book is for everyone who wants to turn their vocation back into an avocation and "a thought-provoking examination of our working lives" (Financial Times).

The Senior Building Mechanical Engineer Passbook(R) prepares you for your test by allowing you to take practice exams in the subjects you need to study.

In the almost sixty years since the publication of the first edition of HVAC Engineer's Handbook, it has become widely known as a highly useful and definitive reference for HVAC engineers and technicians alike, and those working on domestic hot and cold water services, gas supply and steam services. The 11th edition continues in the tradition of previous editions, being easily transportable and therefore an integral part of the HVAC engineer or technician's daily tools. Newly updated data on natural ventilation, ventilation rates, free cooling and night-time cooling, make the 11th edition of the HVAC Engineer's Handbook a vital source of information. Fred Porges has worked in both the manufacturing and process industries, and became a partner in a building services consultancy in 1962. He has held senior positions with design contractors, and his experience covers every building service and type of building from schools to housing, factories to laboratories.

Energy weaves the tapestry of our lives, and it does so in more ways than we usually recognize. While it is clear that it powers our homes, airplanes, and factories, its overwhelming influence often goes without notice in other areas, from the heartbreak of poverty to the motivation for war. While maintaining its availability has the potential to create jobs and contribute to competitive economies, nonrenewable energy sources are scarring our landscapes, polluting our air, and fouling our water. Understanding how we use energy and what we are willing to do to maintain our access to it can help us prepare for the complex and daunting challenges that

linger as we look for alternatives. In *The Thread of Energy*, Martin J. Pasqualetti homes in on this vital driver of human actions and decisions. He exposes the impact of energy according to multiple scales of measurement and assessment, from everyday applications to global entanglements. The book traces our increasing dependence on Earth's nonrenewable energy resources by comparing lifestyle changes throughout history. Pasqualetti showcases the many ways energy infiltrates communication methods in all its forms (e.g., print, visuals, digital, etc.). The final chapters detail various approaches used by democratic societies looking to lessen their energy usage, including the critical importance of environmentally conscious policymakers. *The Thread of Energy* treats energy as a social issue with a technical component, rather than the other way around.

Immigration and Settlement: Challenges, Experiences, and Opportunities draws on a selection

of papers that were presented at the international Migration and the Global City conference at Ryerson University, Toronto, in October of 2010. Through the use of international and Canadian perspectives, this book examines the contemporary challenges, experiences, and opportunities of immigration and settlement in global, Canadian, and Torontonion contexts. In seventeen comprehensive chapters, this text approaches immigration and settlement from various thematic angles, including: rights, state, and citizenship; immigrants as labour; communities and identities; housing and residential contexts; and emerging opportunities. Immigration and Settlement will be of interest to academics, researchers and students, policy-makers, NGOs and settlement practitioners, and activists and community organizers.
