The first section addresses five major conceptual aspects of research on religion. Part two surveys eleven main frameworks of analysis, interpretation, and explanation of religion. Reflecting recent turns in the humanities and social sciences, part three considers eight forms of the expression of religion. Part four provides a discussion of the ways societies and religions, or religious organizations, are shaped by different forms of allocation of resources (i.e., economy). Other chapters in this section consider law, the media, nature, medicine, politics, science, sports, and tourism. Part five reviews important developments, distinctions,

and arguments for each of the selected topics. The study of religion addresses religion as a historical phenomenon and part six looks at seven historical processes. Religion is studied in various ways by many disciplines, and this Handbook shows that the study of religion is an academic discipline in its own right. The disciplinary profile of this volume is reflected in part seven, which considers the history of the discipline and its relevance. Each chapter in the Handbook references at least two different religions to provide fresh and innovative perspectives on key issues in the field. Economics is a contested academic discipline between neoclassical economics and a collection of alternative approaches, such as Marxism-radical economics, Institutional economics, Post Keynesian economics, and others, that can collectively be called heterodox economics. Because of the dominance of neoclassical economics, the existence of the alternative approaches is generally not known. This book is concerned with the community history of heterodox economics, seen primarily through the eyes of Marxian-radical economics and Post Keynesian economics.

Throughout the 20th century neoclassical economists in conjunction with state and university power have attacked heterodox economists and tried to cleanse them from the academy. Professor Lee, his groundbreaking new title discusses issues including the contested landscape of American economics in the 1970s, the emergence and establishment of Post Keynesian economics in the US and the development of heterodox economics in Britain from 1970 to 1996.
