

Lessons Plan About The Two Little Engine File Type

This text brings together the work of 15 elementary education experts who support an integrative approach to educating second language children. The paperback edition is a collection of articles from fourteen elementary education experts who espouse an integrative approach to second language education - one that goes beyond language teaching methodology - to cover a wide range of issues affecting the academic and social success of language minority children. The volume deals not only with second language development, but with the development of the whole child. Rather than focusing on language instruction, it addresses the entire curriculum, and instead of restricting itself to classroom learning, it examines the role of the school, family, and community.

"[This book] provides a step-by-step approach to lesson planning. Although easily accessible, the ideas presented are rooted in established educational theory. It contains both thought-provoking analysis on the rôles of the teacher and clear explanations of key principles. The chapters are based on real life questions such as: What can go into a lesson or course? How do people learn? How can I teach? What materials can I choose? How can I get started on planning? This book will help inexperienced teachers gain confidence in establishing sound working practices and will give more experienced teachers ideas to refresh their routines." -- book jacket.

How Chinese Teach Mathematics and Improve Teaching builds upon existing studies to examine mathematics classroom instruction in China. It combines contributions from Chinese scholars with commentary from key Western scholars to offer multiple perspectives in viewing and learning about some important and distinctive features of mathematics classroom instruction. Viewing classroom instruction as part of teachers' instructional practices, this book goes beyond teachers' in-classroom instructional practice by also examining Chinese teachers' approaches and practices in developing and improving teaching. Through this unique approach, How Chinese Teach Mathematics and Improve Teaching expands and unpacks the otherwise fragmented knowledge about Chinese practices in developing and carrying out mathematics classroom instruction. This book is indispensable reading for those interested in Chinese practices in mathematics teaching, and is a key book for teacher educators, school administrators and policy makers in expanding ways of supporting and helping mathematics teachers in instructional development and improvement.

Lesson planning in line with the new Primary National Curriculum! Structured around the number and place value sections of the programmes of study within the National Curriculum (DfE, 2013), this book provides practical examples and lesson ideas on how number and place value can be taught within the primary classroom. Children need an in-depth understanding of our number system in order to access effectively other elements of the number curriculum; this is an area of maths that is a high focus throughout the primary curriculum. The accompanying commentary before and after each lesson plan, informs some of the decisions that you will make as part of the planning process. Potential challenges associated with the lesson, including common errors and misconceptions children encounter are also discussed. The authors recognise that each class is unique and so you will find suggestions after each lesson on how it can be adapted and developed to suit your teaching needs. Every teacher knows that a good lesson needs planning and preparation. It applies to everything we teach, and ESOL is certainly no exception. I have been asked occasionally to teach classes at very short notice which means no preparation and I have managed to do it. However, it has always left me with a sense of frustration which is why I rarely agree to do it these days because I like to be prepared in order to make my lessons count. Having recently returned to teaching, I have discovered that I had two major issues: 1. I couldn't find a lesson plan template I liked. 2. My lesson plans kept getting lost among the paperwork. So I decided to create a book which I was going to use for my lesson planning. I worked out a plan template which I liked. I didn't want to make it too long. Like everyone else, I have a life and detailed plans are time-consuming. So it needed to be short. I aimed to fit it into 1 page, with the second page expanding on the activities, takeaways and other aspects should there be a need for a more detailed description. Once the book gets published, I will be ordering a couple of copies of the ESOL Lesson Planner for myself. I hope that you find the templates as useful as I have found it so far. It's just that from now on, I will have all of my plans in one place which can't be a bad thing!

This book presents thirty-one accounts by final-year pre-service teachers, providing guidance and insights for less advanced teacher education students, and illustrating the use of life history and narrative stories as methods for pre-service teachers to explore educational issues in classroom practice. This life-history approach identifies those political, economic, and social forces that have impinged on the individual at different points in their life and contributed to the process of changing their identities. These stories are not written by established specialists in the areas they deal with, but instead by novice teachers at the beginning of their paths towards mastering the intricacies of teaching and learning in school settings. As such the book provides a mentoring framework and a means of helping pre-service teachers share their valuable experiences and insights into aspects such as how to manage practicum requirements. It helps establish a supportive relationship among pre-service teachers, providing them with access to valuable peer experiences. In addition it helps pre-service teachers make sense of their own practicum experiences and reflect on their own beliefs and professional judgement to develop their approaches and solve problems in their own classroom practice.
