Isolates the key concepts and decision areas of international financial management. The central theme is that the international financial markets are efficient because of informed participants, but managers of firms must increasingly prepare themselves to become aware of international factors and to react to them on an informed basis. Provides materials for understanding the events taking place and to serve as a foundation for continued study. Topics range from the development of an international firm to government rules and policies affecting international business. Times of crisis are unexpected and they bring diverse challenges and opportunities for companies, financial markets, and the economy. On one hand, more risk and uncertainties appear, yet on the other hand, it is an opportunity to reorganize and reinvent the company. It is important for businesses to understand ways to deal with uncertainty and risk in times of economic downturn and what financial strategies and tools can be used to eliminate or reduce the potential negative effects. These effects can reach the company's financial performance, capital structure, as well as cause financial debt and the availability of cash-flow to companies. However, different financial instruments can sustain the business and deal with the difficulties of payment when sales reduce and uncertainty increases; thus, research is essential in this critical

area. When economic downturn affects the financial markets, the role of banks, country dynamics, the economy, and many other facets of the business world, financial management becomes the key for business recovery. The Handbook of Research on Financial Management During Economic Downturn and Recovery shares relevant knowledge on challenges and opportunities caused by crises, such as the pandemic, and the effects on economic and financial arenas. The chapters cover topics such as business models to understand how companies react to pandemic and crises situations, as well as how they change their management and way of conducting business. Other important topics include sustainable development, international financial markets, capital structure changes, uncertainty and risk, and governance and leadership. This book is ideal for shareholders, directors and managers, economists, researchers, academics, practitioners, stakeholders, researchers, academicians, and students interested in knowledge on topics about challenges in the way that companies, financial markets, financial institutions, and governments respond to risk and uncertainty.

Strong financial management skills are essential to promote high standards in international development organizations. Many non-finance people find numbers and financial techniques difficult, however, NGO managers and staff are responsible for sound financial management and without full understanding their programmes will be at best less effective, and at worst vulnerable to going unfunded. Poor communication about financial information, by both finance and non-finance people, often seems to cause a block. This book helps people speak and write financial information better, avoiding jargon, and preventing listeners from 'switching off'. It explains why messages about finance may not be received as they were intended when working cross-culturally and outlines how information can be tailored to different audiences and how to improve understanding and collaboration between finance and non-finance people. It should be read by non-finance and finance managers and staff within non-profit organizations internationally, as well as other organizations.
