Oceanography and Marine Biology: An Annual Review remains one of the most cited sources in marine science and oceanography. The ever-increasing interest in work in oceanography and marine biology and its relevance to global environmental issues, especially global climate change and its impacts, creates a demand for authoritative refereed reviews summarizing and synthesizing the results of recent research. If you are interested in submitting a review for consideration for publication in OMBAR, please email the Editor in Chief, Stephen Hawkins, at S.J.Hawkins@soton.ac.uk. For nearly 60 years, OMBAR has been an essential reference for research workers and students in all fields of marine science. This volume considers such diverse topics as the Great Barrier Reef Expedition of 1928-29, Mediterranean marine caves, macromedusae in eastern boundary currents, marine biodiversity in Korea, and development of a geo-ecological carbonate reef system model to predict responses of reefs to climate change. Seven of the peer-reviewed contributions in Volume 59 are available to read Open Access on this webpage (1, 2, 3, 4, 5, 6 and 9). An international Editorial Board ensures global relevance and expert peer review, with editors from Australia, Canada, Hong Kong, Ireland, Singapore and the United Kingdom. The series volumes find a place in the libraries of not only marine laboratories and oceanographic institutes, but also universities worldwide.

Reflecting increased interest in the field and its relevance in global environmental issues, Oceanography and Marine Biology: An Annual Review, Volume 45 provides authoritative reviews that summarize results of recent research in basic areas of marine research, exploring topics of special and topical importance while adding to new areas as they arise. This volume, part of a series that regards the all marine sciences as a complete unit, features contributions from experts involved in biological, chemical, geological, and physical aspects of marine science. These features along with the inclusion of a full color insert and an extensive reference list, make the text an essential reference for researchers and students in all fields of marine science.

This companion volume to Amsco's Marine Science: Marine Biology and Oceanography 3rd edition* is filled with vocab, activities and assignments that follow the Greene text page by page. Teachers can copy weekly packet assignments from it, or it can be used by students as a consumable. It can be used on short notice if there is a sub, or be assigned as homework. All the student needs is the textbook, physical or electronic. The rationale for having this workbook as a consumable is publishers now put much of their ancillary content online, leaving traditional pen & paper work lacking. Yet, many students still find it valuable to write and keep notes for themselves, and portfolios still matter. The activities in this new edition challenge students to apply the concepts,

give examples, diagram chapters, and think things through with the author. For other titles in this series, find TTT on FB, or click the name at the top of this page, especially for AP courses and Social Studies. Coursepak B for the Greene text is available too, containing warm-ups, bell-ringers and multimedia activities.

Since the first edition of Nitrogen in the Environment published in 1983, it has been recognized as the standard in the field. In the time since the book first appeared, there has been tremendous growth in the field with unprecedented discoveries over the past decade that have fundamentally changed the view of the marine nitrogen cycle. As a result, this Second Edition contains twice the amount of information as contained in the first edition. This updated edition is now available online, offering searchability and instant, multi-user access to this important information. *The classic text, fully updated to reflect the rapid pace of discovery*Provides researchers and students in oceanography, chemistry, and marine ecology an understanding of the marine nitrogen cycle*Available online with easy access and search - the information you need, when you need it
