

Medico Legal Aspects Of Reproduction And Parenthood Medico Legal Series

This important book describes the medical, ethical and legal aspects of reproduction in the context of recent medical advances - areas covered include the legal aspects of marriage and sexual intercourse, the control of fertility and the modern treatment of childlessness due to both male and female abnormality. Legal and moral issues arising from surrogacy are also discussed, as are the rights of the fetus - with particular attention being given to abortion, injury and treatment in utero and experimentation. Medico-legal aspects of parenting include the dilemmas consequent upon the birth of a defective child and the provision of treatment for children. A final section considers the problem of child abuse.

This work deals with the continuing debate between doctors, lawyers and medical ethicists regarding the provision of modern health care. It offers a wide-ranging treatment of medical law and examines the many ethical issues which beset medicine today. This new edition has been revised and expanded to reflect current debates, including an increase in the coverage of the treatment of transsexualism, additional material on the criminal responsibility of doctors and coverage of persistent vegetative state cases. Written in a clear, concise style, the book offers a broad overview of medical law and its interaction with medical ethics. Both authors are leading authorities in their respective fields and provide the reader with an analysis of ethical concepts based on positive legal principles and court decisions, describing what actually happens in practice rather than what should happen, in this important field.

The fact that this series, in common with many other individual contributions to the area of medical law and ethics, has produced a number of books concentrating on human reproduction shows the extent to which reproductive technologies have stimulated controversy and legal and ethical debate.

This title analyses the Human Fertilisation and Embryology Act 2008 and

considers the wide-ranging legal, ethical, medical, moral and social arguments deployed in Parliament in favour of and opposing controversial amendments to the 1990 Act. The book explores in detail the provisions of the 2008 Act focussing on a number of key areas including: The removal of the need for a father provision Creation of saviour siblings Permitting the creation of human admixed embryos (embryos containing both human and animal material) Abortion law reform Analysis/consideration of the potential impact of the 2008 Act for the newly regulated areas of science

In this book the author looks at what rights - if any - people have in the areas of reproduction and the right to found a family. If these rights exist, she then proceeds to discuss whether there is any moral, social or legal justification for hindering people from establishing a family.

Back for a second edition, Current Surgical Guidelines has been fully updated to reflect changes in guidelines across the surgical sub-specialities since its first publication. Drawing together printed and digital guidelines from the Scottish Intercollegiate Guidelines Network (SIGN), the National Institute for Health and Clinical Excellence (NICE), and relevant US guidelines, this book acts as a valuable complete and comprehensive reference for those embarking on their surgical training, revising for exams, or for senior staff as an aide-memoire. Guidelines have been distilled into

summary tables, and topics are formulated to answer most real-life clinical practice questions with contemporary facts and figures, decision recommendations, and treatment options. New chapters on hernias, skin malignancies, trauma, and medicolegal practice have been added to increase fresh challenges facing the contemporary surgical trainee.

First published in 1998, *Reproducing Narrative* sets out to interrogate a number of medico-legal reproductive discourses. Recognizing that these dialogues are heavily imprecated in broader social, political and economic discourses it is contended that responses to reproductive issues are influenced and possibly determined, by non-reproductive concerns both at a parochial and more general level. Whilst a number of such influential narratives are recognized the book concentrates on the narratives of gender which appear implicit within the discourses and practices considered. Given the productive nature of discourse and the traditional premising of gender on sexual difference it becomes apparent that the explicit figuring of the female reproductive body becomes a means of realizing the implicit gender narratives within these discourses. Privileged medico-legal discourses become understood as a technology of gender - an important site at which gender is constituted.

This book provides a unique and in-depth coverage of ethical and moral issues in medicine and their legal implications.

Examines emerging assisted reproductive technologies that will revolutionise the future of human reproduction and their regulation.

Those involved in family and sexual relationships today face a bewildering variety of medico-legal dilemmas. These are encountered from as early as the preconception state of the embryo and continue throughout the period of child raising until the status of the mature minor is achieved. This book dissects a wide range of legal, medical and ethical issues surrounding reproduction and the parental relationship with the resultant child. Questions posed in the various sections include: what constitutes sexual intercourse, what are the implications of contraception and sterilization, is the abortion issues dead?. Is there a right to reproduce and, if so, how is this applied to the modern methods of assisted reproduction?. Is surrogate motherhood acceptable or workable?. The concept of fetal rights is explored and specific attention is given to the management of defective neonates in the light of recent judicial decisions. Other

chapters look at the parent/child relationship in respect of medical treatment and the book concludes with a review of the interfamilial protection of young children under both the civil and the criminal law. Many of the views expressed are novel in that they represent those of a medical doctor exploring the legal field. It is neither a conventional book on family law nor one on medical law; rather, it draws on both to examine a specific area which affects both in a particularly significant way. Both statute and case law have been extensively updated since the publication of the first edition.

Published in 1998, this work is concerned, in the main, with reproduction - for which marriage is not an essential prerequisite. Nevertheless, much of sexuality and the greater part of parenthood still subsist within the marital relationship. Sex and marriage are interdependent - indeed the definition of the latter depends on the former. After looking at the prerequisites for marriage and for making a marriage void, the author shows that the medico-legal interests of marriage relate to the mental health and the sex of the parties. The author also looks at various aspects of the sexual-familial relationship, including contraception, sterilization, abortion, protection of the foetus, foetal experimentation, the infertile husband, the infertile woman, defective neonates and infants, consent to treatment and research in children, the protection of young children and the killing of children within the family. Cases are used to highlight the legal aspects of these subjects.

Excerpt from The Nature of Gunshot Wounds of the Abdomen, and Their Treatment: Based on a Review of the Case of the Late James Fisk, Jr., In Its Medico-Legal Aspects This monograph was read before the Medico - legal Society of the City of New York, for the purpose of demonstrating the necessity of a change in the manner of conducting criminal investigations and in the introduction of expert testimony. As it is necessary in every argument to lay a foundation or basis for its support, and having selected the Stokes case as the most apt illustration of it, I was obliged to describe: the medical history of the case of the late James Fisk, J r.; the nature of Shock, and of gunshot wounds of the abdomen; and the physiological and toxic actions of morphine. Believing that the facts I have collected, and the views advanced, may be of interest, and possibly possess some value; I have rearranged the matter and divided it into five chapters, viz. Excerpt from Injuries of the Spine and Spinal Cord: Without Apparent Mechanical Lesion, and Nervous Shock, in Their Surgical and Medico-Legal Aspects The lesions which collision accidents are presumed to cause are far more subtle. The accident has been slight there is no evidence of any blow having been received; the injured person is unaware, perhaps, that he has been hurt, and yet, nevertheless, the delicate structure of the spinal cord is supposed to have been damaged by the jar of the collision, and to have become liable thereby to morbid structural changes, which, not manifest at first, most surely advance as time goes on, revealing themselves by symptoms only after months or years, and dooming the sufferer to a life of pain, misery and uselessness. Mason explores aspects of pregnancy which involve medico-legal intervention, including unwanted or undesired pregnancies.

This book marks the retirement of Professor Sheila McLean, whose contribution to the discipline of medical law has been truly ground breaking. As one of the pioneers of the discipline, Sheila McLean inspired a revolution in the ways in which lawyers, doctors, courts and patients perceive the relationship between medicine and the law. The first International Bar Association Professor of Law and Ethics in Medicine, she has worked tirelessly to champion the importance of law's role in regulating medicine and protecting patients' rights. The span in content of this book reflects the range of contributions that Professor McLean has herself made. Her work gave direction and shape to a new field of study at a time when few questioned the authority of medicine or thought much about the plight of the patient. This collection brings together 21 leading scholars in healthcare law and ethics to honour the depth and significance of her contribution. Including authors from the US, Australia, Canada and New Zealand, the contributions cover areas as diverse as start and end of life, reproductive rights and

termination of pregnancy, autonomy of patients, the protection of vulnerable patient groups, and the challenges posed by new technologies.

The rapidly changing face of modern medicine and the increasing involvement of public debate in its practice, are reflected in the wide range of contributions to this book, which takes a searching look at the issues which are currently at the forefront of modern debate in medical ethics and the law.

Mason looks at the legal response to those aspects of the troubled pregnancy which require or involve medico-legal intervention. The unwanted pregnancy is considered particularly in the light of the Abortion Act 1967, s.1(1)(d) and the related action for so-called wrongful birth due to faulty ante-natal care. The unexpected or uncovenanted birth of a healthy child resulting from failed sterilisation is approached through an analysis of the seminal case of McFarlane and associated cases involving disability in either the neonate or the mother. The disabled neonate's right to sue for its diminished life is discussed and the legal approach to the management of severe congenital disease is analysed - thus following Baroness Hale in believing that care of the newborn is an integral part of pregnancy. Aspects are considered from historical and comparative perspectives, including coverage of experience in the USA, the Commonwealth and Europe.
