The history of testing mental abilities has seen the dominance of two contrasting approaches, psychometrics and neuropsychology. These two traditions have different theories and methodologies, but overlap considerably in the tests they use. Historically, psychometrics has emphasized the primacy of a general factor, while neuropsychology has emphasized specific abilities that are dissociable. This issue about the nature of human mental abilities is important for many practical concerns. Questions such as gender, ethnic, and age-related differences in mental abilities are relatively easy to address if they are due to a single dominant trait. Presumably such a trait can be measured with any collection of complex cognitive tests. If there are many specific mental abilities, these would be much harder to measure and associated social issues would be more difficult to resolve. The relative importance of general and specific abilities also has implications for educational practices. This book includes the diverse opinions of experts from several fields including psychometrics, neuropsychology, speech language and hearing, and applied psychology.

An updated version of Deborah Whetzel and George Wheaton's earlier volume, this text is a well-organized sourcebook for fundamental practices in industrial psychology and human resources management. Applied Measurement describes the process of job analysis and test development with practical examples and discusses various methods for measuring job performance. Its primary purpose is to provide practical, systematic guidance on how to develop the various kinds of measurement instruments frequently used in the fields of industrial psychology and human resources management to assess personnel. With easy to follow guidance written in straightforward language, Applied Measurement contains three new chapters focusing on training and experience measures, assessment centers, and methods for defending the content validity of tests; includes contributions from many prominent researchers in the field, all of whom have had a great deal of applied experience; begins each chapter with an overview describing the job analysis or measurement method; and uses one job, that of an electrician, as an example throughout the book so that readers can easily understand how to apply job analysis data for the purposes of test development and job performance measurement. This practical, concise book is recommended for students and entry-level practitioners in the fields of industrial psychology and human resources.

The examinations of the present era are becoming tough nuts to crack with the rise of every Sun on the academic horizon of the world. The tests related to General Mental Ability have also received greater attention of papersetters. Thus, these tests would be more difficult in test session commencing from 2002 AD. We, at RPH, decided to give an edge to the candidates such examinations. We worked hard for more than a year on the manuscript of this volume. What finally turned out to be, was a systematic and neatly planned compendium, exclusively dedicated to general mental ability tests. Students preparing of entrance test and competitive examination of MBA, CDS, NDA, CAT, MAT, CMAT, RRB, SCRA, SBIPO, SSC EXAMS, UPSC, GMAT, GINDOMAT, IBPSCWE, B.Ed. etc., would find it to be a boon for themselves. This

systematic study and practice will help them succeed in their examinations. On behalf of publishers, we wish you all the best for your forthcoming examinations.
