The primary mission of the medical school is to create new doctors. Once the medical student has received his or her doctorate, the medical school's interest in, and acceptance of, responsibility for the continued professional development of the physician ceases almost entirely. Yet, with scientific advances in medicine increasing exponentially and the inevitable erosion of memory with time, teachings from our schools of medicine become increasingly irrelevant, forgotten, or both. To maintain competence, the physician must continuously re-educate him- or herself. CME-Continuing Medical Education-will probably never attain the status of the medical school's degree-granting undergraduate program, but medical schools and their faculties must recognize their responsibility, not creating competent physicians but also for maintaining that competence. This volume is the product of a Continuing Medical Education program initiated by the Department of Anesthesiology at the Albert Einstein College of Medicine/Montefiore Medical Center. Our Department of Anesthesiology has historically been, and continues to be, unusually active in post-doctoral education through regional and national conferences and symposia. We recognized, however, that programs that bring physicians together in one location for a limited menu of lectures, questions, and discussion reach only a fraction of the potential audience of anesthesiologists. Such programs, as valuable as they are, by their very structure exclude more anesthesiologists than they include.

This special Instructor's Edition can help you present better programs on the subject of EMS documentation. The patient care record your EMTs and paramedics leave at the hospital is your calling card. How good do you look? Oral reports need knowledgeable and effective delivery. Written reports also need completeness and accuracy. Written reports are a permanent patient medical record. They help with care continuity. The record of your personnel leave reflects on the professionalism of your organization. Patient care reports are the first place attorneys and regulatory agencies look when seeking to place liability. This training program helps you take steps to decrease your liability by teaching your employees how to write organized, professional reports. It also deals with special situations such as patient refusals, sudden death, crime scenes and child and elder abuse -- areas where your liability could increase even if you don't transport a patient. This book breaks down the components of report giving and writing and provides instructors with a useful tool for training their personnel in proper written documentation and verbal reporting situations. It provides margin cues keyed to the text and helpful insights on presenting the program. Sample reports with analysis, useful for discussion groups, are provided.

Engaging in sex, becoming parents, raising children: these are among the most personal decisions we make, and for people with mental retardation, these decisions are consistently challenged, regulated, and outlawed. This book is a comprehensive study of the American legal doctrines and social policies, past and present, that have governed procreation and parenting by persons with mental retardation. It argues persuasively that people with retardation should have legal authority to make their own decisions. Despite the progress of the normalization movement, which has moved so many people with mental retardation into the mainstream since the 1960s, negative myths about reproduction and child rearing among this population persist. Martha Field and Valerie Sanchez trace these prejudices to the eugenics movement of the late nineteenth and early twentieth centuries. They show how misperceptions have led to inconsistent and discriminatory outcomes when third parties seek to make birth control or parenting decisions for people with mental retardation. They also explore the effect of these decisions on those they purport to protect. Detailed, thorough, and just, their book is a sustained argument for reform of the legal practices and social policies it describes.

Traditional Chinese medicine has a long and complex history, yet the basic principles at the heart of practice have remained the same for hundreds of years. Without a solid understanding of these fundamental theories, effective practice is impossible, and this book provides a complete introduction to everything that students and practitioners, both new and experienced, need to know. The book describes and explains all of the fundamental principles of Traditional Chinese Medicine, including yin/yang, the five elements, the 'zang and fu' organs, Zang Xiang, Qi, and the meridians and collaterals of the body. Explaining not only the principles upon which these elements work, but also how they interrelate, the book describes how they can be used in practice to identify, treat and prevent ill-health and disease. This thorough and accessible textbook, compiled by the China Beijing International Acupuncture Training Center (CBIATC), under the editorial directorship of leading Chinese clinicians Zhu Bing and Wang Hongcai, is essential reading for students of traditional Chinese medicine, and is also a useful basic reference for TCM practitioners.

Bipolar disorder is often not recognized as an illness, and people may suffer for years before it is properly diagnosed and treated. Like diabetes or heart disease, bipolar disorder is a long-term illness that must be carefully managed throughout a person's life. Pharmacotherapy is central to the acute treatment and long-term management of the disorder and as there are several classes of drugs, which are often prescribed concurrently, treatment issues are complex. This essential reference work examines major pharmacological treatments in the different phases of bipolar disorder. Chapters are devoted to commonly use pharmacological treatments with a critical review of the existing literature. Each chapter includes information not only on studies that have been published but also on new treatments that have been reported in peer reviewed scientific meetings. Bipolar Psychopharmacotherapy covers both pharmacotherapy and the role of psychotherapy, psychoeducation and social approaches to provide a broad integrative philosophy of care for bipolar patients. Extensive coverage is given to special management issues such as the care of women with bipolar disorder, children and the elderly, as well as bipolar depression and suicide prevention. With contributions from the pioneers in the field and an expert editor team, Bipolar Psychopharmacotherapy provides psychiatrists and all mental health practitioners with an invaluable guide to the management of these complex patients. From the reviews: "If a colleague were to ask me, "What would you recommend I read if I want to become a real expert on bipolarity?" I would respond 'Bipolar Psychopharmacotherapy: Caring for the Patient'." JOURNAL OF BIPOLAR DISORDERS "... a very useful reference on the pharmacological treatment of bipolar disorder that is written in a very practical and user-friendly format... a must for anyone dealing with patients with bipolar disorder." DOODY'S HEALTH SERVICES "... a multifaceted text with broad clinical value... recommended as an in-office reference for the practicing physician who treats the bipolar patients... to all Health Science libraries as a general reference text." THE ELECTRIC REVIEW

Sexual harassment in the workplace, date rape, and domestic violence dominate the headlines and have recently sparked scholarly debates about the nature of the sexes. Concurrently, the scientific community is conducting research in topics of sex and gender issues. Indeed, more research is being done on the topics of sexual conflict and coercion than at any other time in the history of the social sciences. Despite this attention, it is clear that these issues are being addressed from two essentially different perspectives: one is labeled "feminist", while the other, viewed as antithetical to the feminist movement, is called "evolutionary psychology", which emphasizes the history of reproductive strategies in understanding conflict between the sexes. This book brings together leading experts from both sides of the debate in order to discover how each could offer insights lacking in the other. The editors' overall goal is to show how the feminist and evolutionary approaches are complementary despite their evident differences, then provide an integration and

synthesis. In fact, several of the contributors to this unique volume consider themselves advocates of both approaches. As a stimulating presentation of the dynamics of sex, power, and conflict--and a pioneering rapprochement of the diverse tendencies within the scientific community-- this book will attract a wide audience in both psychology and women's studies fields.

Omega-3s, trans-fats, polyunsaturated fatty acids, linoleic acidùresearch facts about fatty acids and their relationship to heart disease and atherosclerosis, obesity, cancer, and neurological disorders abound. Chemical names appear on every nutrition label. But, just what do these terms mean in health and disease? The Fats of Life delineates the importance of essential fatty acids, with a focus on distinctions between omega-3 and omega-6 fatty acid variants. The chemical and biochemical characteristics of these fatty acids and their metabolism to a vast array of potent bioactive messengers are described in the context of their potential effects on general health and impact on various diseases and neurological disorders. Glen D. Lawrence addresses in detail the capacity for polyunsaturated fatty acids to influence asthma, atherosclerosis, heart disease, inflammation, cancer, and immunity. Lawrence makes clear that our understanding of the biochemical and physiological effects of dietary fats has advanced tremendously as a result of careful research, but he also stresses that this knowledge has not easily translated into sound dietary recommendations.

The popularity and practice of alternative medicine continues to expand at astonishing rates. In Healing Traditions, Bonnie Blair O'Connor considers the conflicts that arise between the values and assumptions of Western, scientific medicine and those of unconventional health systems. Providing in-depth examples of the importance and benefits of alternative health practices—including the extraordinarily extensive and sophisticated HIV/AIDS alternative therapies movement—O'Connor identifies ways to integrate alternative strategies with orthodox medical treatments in order to ensure the best possible care for patients. In spite of the long-standing prediction that, as science and medicine progressed—and education became more generally available—unconventional systems would die out, they have persisted with undiminished vitality. They have, in fact, experienced a reinvigoration and expansion during the last fifteen to twenty

years. In the United States, this renewal is fueled by people representing a wide cross-section of American society, and most of them also use conventional medicine. This eclecticism can result in conflicts between the values and assumptions of Western, scientific medicine and those of unconventional health systems. O'Connor demonstrates the importance of understanding how various belief systems interact and how this interaction affects health care. She argues that through neutral observation and thorough description of health belief systems it is possible to gain an understanding of those systems, to identify likely points of conflict among systems—especially conflicts that may occur in conventional care settings—and to intervene in ways that ensure the best possible care for patients.
