The Challenge Built to Last, the defining management study of the nineties, showed how great companies triumph over time and how long-term sustained performance can be engineered into the DNA of an enterprise from the verybeginning. But what about the company that is not born with great DNA? How can good companies, mediocre companies, even bad companies achieve enduring greatness? The Study For years, this question preyed on the mind of Jim Collins. Are there companies that defy gravity and convert long-term mediocrity or worse into long-term superiority? And if so, what are the universal distinguishing characteristics that cause a company to go from good to great? The Standards Using tough benchmarks, Collins and his research team identified a set of elite companies that made the leap to great results and sustained those results for at least fifteen years. How great? After the leap, the good-to-great companies generated cumulative stock returns that beat the general stock market by an average of seven times in fifteen years, better than twice the results delivered by a composite index of the world's greatest companies, including Coca-Cola, Intel, General Electric, and Merck. The Comparisons The research team contrasted the good-to-great companies with a carefully selected set of comparison companies that failed to make the leap from good to great. What was different? Why did one set of companies become truly great performers while the other set remained only good? Over five years, the team analyzed the histories of all twenty-eight companies in the study. After sifting through mountains of data and thousands of pages of interviews, Collins and his crew discovered the key determinants of greatness -- why some

companies make the leap and others don't. The Findings The findings of the Good to Great study will surprise many readers and shed light on virtually every area of management strategy and practice. The findings include: Level 5 Leaders: The research team was shocked to discover the type of leadership required to achieve greatness. The Hedgehog Concept (Simplicity within the Three Circles): To go from good to great requires transcending the curse of competence. A Culture of Discipline: When you combine a culture of discipline with an ethic of entrepreneurship, you get the magical alchemy of great results. Technology Accelerators: Good-to-great companies think differently about the role of technology. The Flywheel and the Doom Loop: Those who launch radical change programs and wrenching restructurings will almost certainly fail to make the leap. "Some of the key concepts discerned in the study," comments Jim Collins, "fly in the face of our modern business culture and will, quite frankly, upset some people." Perhaps, but who can afford to ignore these findings?

Teacher Education through Active Engagement identifies and addresses a contemporary issue: the ways in which teaching and teacher education are articulated by politicians, civil servants, business leaders and educational entrepreneurs intent on profit-making in the current global neoliberal policy context. This is often characterised by narrow and ill-conceived ideas about teacher characteristics and competences; recruiting and fast-tracking graduates from elsewhere into the profession; the reform of teacher training with less emphasis on theory and academic study; a narrow focus on teachers' core skills; and the promotion of training in model 'teaching schools'. In this book contributors challenge this conceptualisation and demonstrate practitioners' necessary intellectual activity to wrest back professional control. By drawing on practice-focused research carried out in sites of educational policy and practice, each chapter exemplifies for teachers, student teachers and teacher educators the sort of 'knowledge work' to coordinate a professional reply to non-educationalists who dictate the terms of teaching and teacher education. The book provides directions for encouraging critical thinking, analytical skills and political activism, which consider the needs and interests of diverse children and young people in real classrooms, real schools and real communities. Illustrated throughout with practice-focused research and drawing on the historical case of Winifred Mercier and her colleagues at the City of Leeds training college who challenged the establishment to leave a legacy of professional control, the book will appeal to practitioners, academics and researchers in the fields of teacher education and education studies.

The Anarchist Cookbook will shock, it will disturb, it will provoke. It places in historical perspective an era when "Turn on, Burn down, Blow up" are revolutionary slogans of the day. Says the author "This book... is not written for the members of fringe political groups, such as the Weatherman, or The Minutemen. Those radical groups don't need this book. They already know everything that's in here. If the real people of America, the silent majority, are going to survive, they must educate themselves. That is the purpose of this book." In what the author considers a survival guide, there is explicit information on the uses and effects of drugs, ranging from pot to heroin to peanuts. There i detailed advice concerning electronics, sabotage, and surveillance, with data on everything from bugs to scramblers. There is a comprehensive chapter on natural, non-lethal, and lethal weapons, running the gamut from cattle prods to sub-machine guns to bows and arrows.

This book contains the proceedings of the XIth International Symposium on Ruminant Physiology. The papers address ruminant comparative physiology, the rumen ecosystem and metagenomics, nutrient digestion and absorption, methanogenesis, tissue metabolism and gene expression, pregnancy, lactation and growth, adaptation to heat-stress, nitrogen use, nutrition and reproduction, nutrition and welfare and nutrition for sustainable ruminant production. These topics are in line with the current challenges for animal breeding: production efficiency, meat and milk quality, environment (greenhouse gases, nitrogen use), animal welfare and health. The contributions come from research teams in 49 countries of all continents, showing a world-wide interest in ruminant nutrition and physiology. They show the latest techniques and results on ruminant nutrition physiology, including fundamental and integrative approaches, presented in the book on the following sections: (1) Digestion and absorption; (2) Metabolism and hormonal regulations; (3) Nutrition and reproduction; (4) Nutrition and welfare. Proceedings from past ISRP symposia have had a major influence on research and teaching in animal science over the years. Without a doubt, this book, which is of interest to all professionals and researchers who are concerned with ruminant nutrition and physiology, will contribute to this fine tradition. Continuing its calling to define the field and where it is going, the Second Edition of this landmark handbook brings up to date its comprehensive reportage of scholarly

developments and school curriculum initiatives worldwide, providing a panoramic view of the state of curriculum studies globally. Its international scope and currency and range of research and theory reflect and contribute significantly to the ongoing internationalization of curriculum studies and its growth as a field worldwide. It is widely accepted that the machinery of multicultural societies and liberal democratic systems is dependent upon various forms of dialogue - dialogue between political parties, between different social groups, between the ruling and the ruled. But what are the conditions of a democratic dialogue and how does the philosophical dialogic approach apply to practice? Recently, facing challenges from mass protest movements across the globe, liberal democracy has found itself in urgent need of a solution to the problem of translating mass activity into dialogue, as well as that of designing borders of dialogue. Exploring the multifaceted nature of the concepts of dialogue and democracy, and critically examining materializations of dialogue in social life, this book offers a variety of perspectives on the theoretical and empirical interface between democracy and dialogue. Bringing together the latest work from scholars across Europe, *Democracy in Dialogue, Dialogue in Democracy* offers fresh theorizations of the role of dialogue in democratic thought and practice and will appeal to scholars of sociology, political science and social and political theory.

Written at a time of uncertainty about the implications of the English government's curriculum policies, *Knowledge and the Future School* engages with the debate between the government and large sections of the educational community. It provides a forward-looking framework for head teachers, their staff and those involved in training teachers to use when developing the curriculum of individual schools in the context of a national curriculum. While explaining recent ideas in the sociology of educational knowledge, the authors draw on Michael Young's earlier research with Johan Muller to distinguish three models of the curriculum in terms of their assumptions about knowledge, referred to in this book as Future 1, Future 2 and Future 3. They link Future 3 to the idea of 'powerful knowledge' for all pupils as a curriculum principle for any

school, arguing that the question of knowledge is intimately linked to the issue of social justice and that access to 'powerful knowledge' is a necessary component of the education of all pupils. Knowledge and the Future School offers a new way of thinking about the problems that head teachers, their staff and curriculum designers face. In charting a course for schools that goes beyond current debates, it also provides a perspective that policy makers should not avoid.

Stakeholder participation in economic development is generally considered to be a good thing. However, questions remain: Does stakeholder participation live up to the high expectations about it in the literature? How can success be measured? What are suitable criteria and indicators? How do the involved stakeholders themselves judge the outcomes of their involvement? What can be done to improve the performance of stakeholder participation? Which structural factors impede stakeholder participation? This study addresses questions such as these with respect to methodology, case studies, and policy implications.
