NATIONAL BESTSELLER • For anyone who wants to learn a foreign language, this is the method that will finally make the words stick. "A brilliant and thoroughly modern guide to learning new languages."—Gary Marcus, cognitive psychologist and author of the New York Times bestseller Guitar Zero At thirty years old, Gabriel Wyner speaks six languages fluently. He didn't learn them in school—who does? Rather, he learned them in the past few years, working on his own and practicing on the subway, using simple techniques and free online resources—and here he wants to show others what he's discovered. Starting with pronunciation, you'll learn how to rewire your ears and turn foreign sounds into familiar sounds. You'll retrain your tongue to produce those sounds accurately, using tricks from opera singers and actors. Next, you'll begin to tackle words, and connect sounds and spellings to imagery rather than translations, which will enable you to think in a foreign language. And with the help of sophisticated spaced-repetition techniques, you'll be able to memorize hundreds of words a month in minutes every day. This is brain hacking at its most exciting, taking what we know about neuroscience and linguistics and using it to create the most efficient and enjoyable way to learn a foreign language in the spare minutes of your day.

From the No. 1 bestselling author of What If? - the man who created xkcd and explained the laws of science with cartoons - comes a series of brilliantly simple diagrams ('blueprints' if you want to be complicated about it) that show how important things work: from the nuclear bomb to the biro. It's good to know what the parts of a thing are called, but it's much more interesting to know what they do. Richard Feynman once said that if you can't explain something to a first-year student, you don't really get it. In Thing Explainer, Randall Munroe takes a quantum leap past this: he explains things using only drawings and a vocabulary of just our 1,000 (or the ten hundred) most common words. Many of the things we use every day - like our food-heating radio boxes ('microwaves'), our very tall roads ('bridges'), and our computer rooms ('datacentres') - are strange to us. So are the other worlds around our sun (the solar system), the big flat rocks we live on (tectonic plates), and even the stuff inside us (cells). Where do these things come from? How do they work? What do they look like if you open them up? And what would happen if we heated them up, cooled them down, pointed them in a different direction, or pressed this button? In Thing Explainer, Munroe gives us the answers to these questions and many, many more. Funny, interesting, and always understandable, this book is for anyone -- age 5 to 105 -- who has ever wondered how things work, and why.

Using English Words examines the impact that the life histories of people have on their vocabulary. Its starting point is the taken-for-granted

fact that the vocabulary of English falls into two very different sections. Randolph Quirk mentions this striking incompatibility between the Anglo Saxon and the Latinate elements in English: "the familiar homely-sounding and typically very short words" that we learn very early in life and use for most everyday purposes; and "the more learned, foreign-sounding and characteristically rather long words" (1974, p. 138). It is mainly the second type of word that native speakers start learning relatively late in their use of English, usually in the adolescent years of education, and keep on learning. It is mainly the one type of word, rather than the other, that ESL/ EFL students have more difficulty with, depending on their language background. This book shows how discursive relations, outside education, 'position' people through their vocabularies. Some are prepared for easy entry into lifetime prospects of relative privilege and educational success, while others are denied entry. In writing this book, I share an aim with other writers who observe the many discontinuities that exist between discursive practices in communities outside schools, and the discursive demands that schools make (e. g. Hamilton et a1. [19931, Heath [1983], Luke [19941, Philips [1983], Romaine [1984], Scollon & Scollon [1981]).

All entries in the rank frequency list feature the top 20 30 collocates (nearby words) for that word, which provide valuable insight into the meaning and usage. Alphabetical and part of speech indexes are provided for ease of use. The dictionary also contains 31 thematically organized and frequency-ranked lists of words on a variety of topics, such as family, sports, and food.
