The Struggle for Nature outlines and examines the main aspects of current environmental philosophy including deep ecology, social and political ecology, eco-feminism and eco-anarchism. It criticises the dependency on science of these philosophies and the social problems engendered by them. The author argues for a post-naturalistic turn in environmental philosophy. The Struggle for Nature presents the most up-to-date arguments in environmental philosophy, which will be valuable reading for students of applied philosophy, environmental studies and geography.

Filmmaker, film essayist, installation artist, writer: the Berlin artist Harun Farocki has devoted his life to the power of images. Over the thirty-plus years of his career, Farocki has explored not the images of life but rather the life of images that surrounds us in newspapers, cinema, books, television, and advertising. Harun Farocki examines, from different critical perspectives, his vast oeuvre, which includes three feature films, critical media pieces, children's television features, "learning films" in the tradition of Brecht, and installation pieces. Interviews, a selection of Farocki's own writings, and an annotated filmography complete a valuable biography of this pioneering artist and his legendary career.

The Sixth International Congress of Psychosomatic Obstetrics and Gynecology, which took place from 2 to 6 September 1980 in the congressional chambers of the former Reichstag building in Berlin, had as its theme "Women in a Changing Society." Particular emphasis was placed on the fact that in illness, as well as in good health, women must be considered in a comprehensive psychosocial context. Observations from medical, psychological, sociological, and anthropological perspectives on the healthy and sick woman through the various stages of her life presented a wide spectrum of scientific research. Sessions covering such fundamental topics as the problems of the young mother, women in the postgenerative phase, and the early mother-child relationship were enriched by many recent scientific contributions. Further subjects, ranging from the dialogue in the gynecologist's consulting room through the emotional situation of the gynecologist, body language in female sexuality, and sexual disorders experienced by gynecological patients to psychosomatics and cancer, were pursued in small workshops. Of particular psychoendocrinological interest were the contributions on obesity and the premenstrual syndrome. The results of this workshop and another on unwanted pregnancy have appeared recently in separate monographs.

"This volume views terrorism trials as a form of theatre, where the 'show' that a trial may offer can develop often unexpected dynamics, which at times might inconvenience the government. Seeing terrorism trials as a stage where legal instruments are used

(and abused) to argue the validity of contested political constructs, this study presents a performative perspective to draw attention to the mechanisms and effects of terrorism trials in and outside the courtroom. With a special focus on how the power of these performances may in turn shape new narratives of justice and/or injustice, it offers vital insights into terrorism trials directed involving different types of terrorism suspects, from left-wing to ethno-nationalist and jihadist terrorists, in Spain, Russia, Germany, the Netherlands, and the United States"--Back cover.

The volume addresses important issues of human adaptation and change.

This reader provides a selection of articles and essays by leading figures in the postmodernism debate.

Current findings from anthropology, genetics, prehistory, cognitive and neuroscience indicate that human nature is grounded in a co-evolution of tool use, symbolic communication, social interaction and cultural transmission. Digital information technology has recently entered as a new tool in this co-evolution, and will probably have the strongest impact on shaping the human mind in the near future. A common effort from the humanities, the sciences, art and technology is necessary to understand this ongoing co- evolutionary process. Interactivity is a key for understanding the new relationships formed by humans with social robots as well as interactive environments and wearables underlying this process. Of special importance for understanding interactivity are human-computer and human-robot interaction, as well as media theory and New Media Art. »Paradoxes of Interactivity« brings together reflections on »interactivity« from different theoretical perspectives, the interplay of science and art, and recent technological developments for artistic applications, especially in the realm of sound.

The linguistic integration of migrants affects every aspect of settling in a new country (employment, health, etc.). The aim of this collection of texts is to propose a number of specific measures member states can take to help adult migrants become acquainted with the language of the host country. The main focus is on organising language courses that meet migrants' real communication needs. It is not enough for authorities simply to consider the technical aspects of such courses, they should also design and conduct them in accordance with the fundamental values of the Council of Europe. A

number of issues concerning the linguistic integration of adult migrants are presented here, beginning with the notion of linguistic integration itself. Family reunion, the nature of citizenship and the function of language tests, among others, are dealt with from the point of view of language and language use. Readers are invited to reflect on the type of language competences that need to be acquired as well as an appropriate use of the Common European Framework of Reference for Languages. The collection also sets out approaches and instruments designed to assist in implementing effective policies. A polymath and author of *Laws of Form*, George Spencer Brown, brought together mathematics, electronics, engineering and philosophy to form an unlikely bond. This book investigates *Design with NOR*, the title of the yet unpublished 1961 typescript by Spencer Brown.

This volume collects selected papers delivered at the 15th Conference of the International Society for Utilitarian Studies, which was held at Karlsruhe Institute of Technology in July 2018. It includes papers dealing with the past, present, and future of utilitarianism – the theory that human happiness is the fundamental moral value – as well as on its applications to animal ethics, population ethics, and the future of humanity, among other topics.

From Germany to Germany
Diary 1990
Random House

This work is a collection of twenty-four fundamental essays on the many-sided topic of German exile literature during and after Hitler's Third Reich. Exile literature, which emerged in the 1980s as a special field of critical investigation within German Studies, embraced the diverse works of writers who were scattered from Hollywood to Moscow but were related by the common bond of exile from Germany. Leading American and European specialists in the field are contributors to the volume, which discusses the work of Thomas Mann, Bertolt Brecht, Hermann Broch and Karl Wolfskehl among others.

This classic textbook by Eberhard Sturm is the only up-to-date PL/I book currently available in the English language which shows the range of the new PL/I on the computer platforms OS/2, Windows, AIX and z/OS – the basis being the new PL/I compiler from IBM. The language was extended by the package concept, abstract data types, attributes to communicate with C programs and more than a hundred BUILTIN functions. The book provides the basis for certification as an "IBM Certified PL/I Programmer/Developer". Suitable for self-study, it introduces all areas of the language.

It is a useful source of ideas and information for those programmers who already have a certain level of experience as well as those who only want to discover the variety of new language features.

In 1990, Günter Grass - a reluctant diarist - felt compelled to make a record of the interesting times through which he was living. Following the fall of the Berlin Wall in November 1989 and the collapse of Communism, Germany and Europe were enduring a period of immense upheaval. Grass resolved to immerse himself in these political debates: he travelled widely throughout both Germanys, the former East and the former West, conducting a lively exchange with political enemies, friends and his own children about all the questions posed by reunification. His account gives the reader an unparalleled insight into a key moment in the life of modern Europe, seen through the eyes of one of its most acclaimed writers. It also provides a startling insight into the creative process as the reader witnesses ideas for novels occurring and then taking shape. *From Germany to Germany* is both a personal journal by a great creative artist and a penetrating commentary on recent European history by someone who was simultaneously an acute observer and a highly engaged participant.

In this book, experts discuss how German real estate values have remained stable throughout the financial crisis, even though transaction volumes have been very volatile since 2005. Consequently, risk-averse national and international investors have started to invest in virtually all German real estate asset classes. This book tries to answer what has made the German real estate markets more resilient to shocks than many European real estate markets by analyzing the economic, regulatory and demographic environment. In 30 well-structured chapters, experts from both the academic and professional world analyze structural and current issues of German real estate markets. Readers will get a deep understanding of what makes the German real estate market special and where potential opportunities and threats in Europe's largest real estate market exist.

Just fifty years ago Julian Huxley, the biologist grandson of Thomas Henry Huxley, published a book which easily could be seen to represent the prevailing outlook among young scientists of the day: *If I were a Dictator* (1934). The outlook is optimistic, the tone playfully rational, the intent clear - allow science a free hand and through rational planning it could bring order out of the surrounding social chaos. He complained, however: At the moment, science is for most part either an intellectual luxury or the paid servant of capitalist industry or the nationalist state. When it and its results cannot be fitted into the existing framework, it and they are ignored; and furthermore the structure of scientific research is grossly lopsided, with over-emphasis on some kinds of science and partial or entire neglect of others. (pp. 83-84) All this the scientist dictator would set

right. A new era of scientific humanism would provide alternative visions to the traditional religions with their Gods and the civic religions such as Nazism and fascism. Science in Huxley's version carries in it the twin impulses of the utopian imagination - Power and Order. Of course, it was exactly this vision of science which led that other grand son of Thomas Henry Huxley, the writer Aldous Huxley, to portray scientific discovery as potentially subversive and scientific practice as ultimately enslaving. Constructional morphology explains features of organisms from a constructional and functional point of view. By means of physical analysis it explains the operational aspects of organic structures - how they can perform the activities organisms are expected to fulfil in order to survive in their environment. Constructional morphology also explains options and constraints during the evolution determined by internal constructional needs, ontogenetic demands, inherited organizational preconditions and environmental clues.

Aspects of political culture, i.e. concerns with the 'subjective' dimension of politics including dominant political orientations, perceptions and interpretations, always have been particularly relevant with regard to the case of Germany and its great variety of political regimes during the last century. This is true both with regard to political science and practical politics. This volume provides a comprehensive overview concerning the major historical legacies, regional and sub-cultural variations, and current problems of democratic orientations, national identity and relationships to the outside world.

This collection assembles some of Herbert Marcuse's most important work and presents for the first time his responses to and development of classic Marxist approaches to revolution and utopia, as well as his own theoretical and political perspectives. This sixth and final volume of Marcuse's collected papers shows Marcuse's rejection of the prevailing twentieth-century Marxist theory and socialist practice - which he saw as inadequate for a thorough critique of Western and Soviet bureaucracy - and the development of his revolutionary thought towards a critique of the consumer society. Marcuse's later philosophical perspectives on technology, ecology, and human emancipation sat at odds with many of the classic tenets of Marx's materialist dialectic which placed the working class as the central agent of change in capitalist societies. As the material from this volume shows, Marcuse was not only a theorist of Marxist thought and practice in the twentieth century, but also proves to be an essential thinker for understanding the neoliberal phase of capitalism and resistance in the twenty-first century. A comprehensive introduction by Douglas Kellner and Clayton Pierce places Marcuse's philosophy in the context of his engagement with the main currents of twentieth century philosophy while also providing important analyses of his anticipatory theorization of capitalist development through a neoliberal restructuring of society. The volume concludes with an afterword by Peter Marcuse.
