Petrogav International provides courses for participants that intend to work on onshore drilling and production platforms. Training courses are taught by professionals from the oil and gas industry with current knowledge and years of field experience. The participants will get all the necessary competencies to work on the onshore drilling rigs and on the onshore oil and gas rigs. It is intended also for non-drilling and non-production personnel who work in drilling, exploration and production industry. This includes logistics personnel, accounting, administrative and support staff, environmental professionals, etc. This course provides a non-technical overview of the phases, operations and terminology used on onshore oil and gas rigs. It is intended also for non-production personnel who work in the onshore drilling, exploration and production industry. This includes logistics personnel, accounting, administrative and support staff, environmental professionals, etc. No prior experience or knowledge of production operations is required. This course will provide participants a better understanding of the issues faced in all aspects of drilling operations, with a particular focus on the unique aspects of offshore operations.

The Digital Oilfield is the buzzword of the oil industry in these early years of the 21st century. Data swiftly flows to databases, moves around the world at the speed of light and can be exchanged seamlessly between all stakeholders. From time to time, for good housekeeping, data is cleansed. Many people are involved in these intermediate or final steps. But, who cares about the real sources of oilfield data, seismic profiles, wirelines and LWD logs, drilling data and core measurements? This book expresses the real concerns about

input data. It explains the inherent weaknesses of the oilfield data acquisition processes and gives recommendations on how to improve them. This quest goes through the paths of uncertainty management and elucidates the important role of the field engineers.

This course covers aspects like HSE, Process, Mechanical, Electrical and Instrumentation & Control that will enable you to apply for any position in the Oil and Gas Industry. The job interview is probably the most important step you will take in your job search journey. Because it's always important to be prepared to respond effectively to the questions that employers typically ask at a job interview Petrogav International has prepared this eBooks that will help you to get a job in oil and gas industry. As a BONUS this eBook contains web addresses to 309 video movies for a better understanding of the technological process and 205 web addresses to recruitment companies where you may apply for a job.

The petroleum industry in general has been dominated by engineers and production specialists. The upstream segment of the industry is dominated by drilling/completion engineers. Usually, neither of those disciplines have a great deal of training in the chemistry aspects of drilling and completing a well prior to its going on production. The chemistry of drilling fluids and completion fluids have a profound effect on the success of a well. For example, historically the drilling fluid costs to drill a well have averaged around 7% of the overall cost of the well, before completion. The successful delivery of up to 100% of that wellbore, in many cases may be attributable to the fluid used. Considered the "bible" of the industry, *Composition and Properties of Drilling and Completion Fluids*, first written by Walter Rogers in 1948, and updated on a regular basis thereafter, is a key tool to achieving successful delivery of the wellbore. In its Sixth Edition, *Composition and Properties of Drilling and Completion Fluids* has been updated and revised to incorporate new information on technology, economic, and political issues that have impacted the use of fluids to drill and complete oil and gas wells. With updated content on Completion Fluids and Reservoir Drilling Fluids, Health, Safety & Environment, Drilling Fluid Systems and Products, new fluid systems and additives from both chemical and engineering perspectives, Wellbore Stability, adding the new R&D on water-based muds, and with

The Future Belongs to the Digital Engineer By Dutch Holland and Jim Crompton "The Digital Engineer will be a person with knowledge and skill in the use of engineering and digital technology to enable major process improvements and performance increases in both physical and business operations." New engineers today enter the workforce with high digital literacy, in addition to their qualifications in traditional disciplines. The challenge is to turn new

professionals into Digital Engineers who bring value to the business. "Jim Crompton, with his coauthor Dutch Holland, has clearly shown us how to bring historically-disconnected skills, organizations and technologies together to drive competitive advantage. This book needs to be on every upstream business person's digital bookshelf." Peter J. Robertson, former Vice Chairman of the Board, Chevron Corporation

"The book is aimed at narrowing the gap between industrial aspects of mud engineering and its academic basics. It also sums up the experience of handling unconventional and unforeseen problems related with well-bore instability with the right composition of mud to facilitate correct properties in drilling fluid design, and thus minimize/eliminate non-productive time. If the book

is able to fulfil any / all of these objectives, then the purpose of writing the book is served. It aims to reach out to petroleum engineering students and those mud engineers who have just begun their career in oil field, with many questions wandering in their minds, and aims to answer them in a manner that makes sense to their limited exposure with the least technical jargon but yet, effectively quench their thirst of inquisitiveness. For the professionals who aspire to climb the ladders of success to reach the corporate jungle, the book cautions them that what appears costly superficially need not be always costly and thus spend enough money to have a right team of professionals surrounding them and not the guys who will always agree to them for the fear of loss of their job."
