'All animals are equal, but some animals are more equal than others.' Drunken Mr Jones of Manor Farm has neglected his livestock for too long. In a burst of insurgent fervour they rise up and he is deposed, with the pigs taking charge of the newly named Animal Farm. Everything runs smoothly, productivity soars, and all animals are well-fed and happy. But the further away the memory of the revolution, the more distant seem its ideals, and when Boxer the workhorse is betrayed, the horrifying extent of the pigs' corruption is revealed. Orwell's 'fairy story', a scathing satire of Soviet communism, is as potent now as it was in 1945. Animal Farm is one of literature's most electrifying examinations of power and corruption. George Orwell, born Eric Arthur Blair (1903 - 1950) was a teacher, novelist and journalist. He also served his country, including in the Home Guard during the Second World War. He later became the literary editor of the Tribune and wrote for the Observer and Manchester Evening News. The author of nine books, Orwell is best known for the allegorical Animal Farm (1945) and dystopian satire Nineteen Eighty-Four (1949). They have gone on to become two of the most influential books of the twentieth century. 'A wise, compassionate, and illuminating fable.' New York Times 'There are no replacements for George Orwell, just as there are no replacements for a Bernard Shaw or a Mark Twain...he pricked, provoked and badgered lazy minds, delighted those who enjoyed watching an original intelligence at work.' Time 'A book for everyone and Everyman,

its brightness undimmed after fifty years.' Ruth Rendell 'Timeless, even transcendent.'

Christopher Hitchens 'Absolutely first rate.' New Yorker

Linux® is being adopted by an increasing number of embedded systems developers, who have been won over by its sophisticated scheduling and networking, its cost-free license, its open development model, and the support offered by rich and powerful programming tools. While there is a great deal of hype surrounding the use of Linux in embedded systems, there is not a lot of practical information. Building Embedded Linux Systems is the first in-depth, hard-core guide to putting together an embedded system based on the Linux kernel. This indispensable book features arcane and previously undocumented procedures for: Building your own GNU development toolchain Using an efficient embedded development framework Selecting, configuring, building, and installing a target-specific kernel Creating a complete target root filesystem Setting up, manipulating, and using solid-state storage devices Installing and configuring a bootloader for the target Cross-compiling a slew of utilities and packages Debugging your embedded system using a plethora of tools and techniques Details are provided for various target architectures and hardware configurations, including a thorough review of Linux's support for embedded hardware. All explanations rely on the use of open source and free software packages. By presenting how to build the operating system components from pristine sources and how to find more documentation or help, this book greatly simplifies the task of keeping complete control over one's embedded operating system, whether it be for technical or sound financial reasons. Author Karim Yaghmour, a well-known designer and speaker who is responsible for the Linux Trace Toolkit, starts by discussing the strengths and weaknesses of Linux as an embedded operating system. Licensing issues are

included, followed by a discussion of the basics of building embedded Linux systems. The configuration, setup, and use of over forty different open source and free software packages commonly used in embedded Linux systems are also covered. uClibc, BusyBox, U-Boot, OpenSSH, thttpd, tftp, strace, and gdb are among the packages discussed.

THROUGH the centuries, Chinese women have had to struggle under a load of injustices—denial of education, ineligibility to sit the civil service examinations and hold official posts, female infanticide, selling of daughters, concubinage, foot binding—just to name a few. They had largely remained silent because they did not have a voice. As China descended to abject poverty in the nineteenth century, the lot of Chinese women became even worse. When Chinese women came to Malaysia (Malaya then) largely from the nineteenth century onwards, the circumstances became different. Under British law, they were the equal of men, but social conditions took some time to evolve. For instance, daughters were left out of inheritance until quite recently, sons received preferential treatment in education and polygamy was declared illegal only in the 1930s. But Chinese women became successful entrepreneurs through their own ability, and, through education, many of them became distinguished professionals. Phoenix Rising, Pioneering Chinese Women of Malaysia is the story of Chinese women who have immigrated to this country and forged independent lives different from their lives in China. They have shown courage, resilience and determination in improving their lives. Like the phoenix, the mythological bird that symbolises the Chinese woman, they are set to soar to greater heights given equal opportunities and just social conditions.

Erlang is the language of choice for programmers who want to write robust, concurrent applications, but its strange syntax and functional design can intimidate the uninitiated. Luckily, there's a new weapon in the battle against Erlang-phobia: *Learn You Some Erlang for Great Good!* Erlang maestro Fred Hébert starts slow and eases you into the basics: You'll learn about Erlang's unorthodox syntax, its data structures, its type system (or lack thereof!), and basic functional programming techniques. Once you've wrapped your head around the simple stuff, you'll tackle the real meat-and-potatoes of the language: concurrency, distributed computing, hot code loading, and all the other dark magic that makes Erlang such a hot topic among today's savvy developers. As you dive into Erlang's functional fantasy world, you'll learn about: –Testing your applications with EUnit and Common Test –Building and releasing your applications with the OTP framework –Passing messages, raising errors, and starting/stopping processes over many nodes –Storing and retrieving data using Mnesia and ETS –Network programming with TCP, UDP, and the inet module –The simple joys and potential pitfalls of writing distributed, concurrent applications Packed with lighthearted illustrations and just the right mix of offbeat and practical example programs, *Learn You Some Erlang for Great Good!* is the

perfect entry point into the sometimes-crazy, always-thrilling world of Erlang. This proceedings volume includes the full research papers presented at the First International Conference on Mobile Computing, Applications, and Services (MobiCASE) held in San Diego, California, during October 26-29, 2009. It was sponsored by ICST and held in conjunction with the First Workshop on Innovative Mobile User Interactivity (WIMUI). MobiCASE highlights state-of-the-art academic and industry research work in - main topics above the OSI transport layer with an emphasis on complete end-to-end systems and their components. Its vision is largely influenced by what we see in the consumer space today: high-end mobile phones, high-bandwidth wireless networks, novel consumer and enterprise mobile applications, scalable software infrastructures, and of course an increasingly larger user base that is moving towards an almost a- mobile lifestyle. This year's program spanned a wide range of research that explored new features, algorithms, and infrastructure related to mobile platforms. We received submissions from many countries around the world with a high number from Europe and Asia in addition to the many from North America. Each paper received at least three independent reviews from our Technical Program Committee members during the Spring of 2009, with final results coming out in July. As a result of the review process, we selected 15 high-quality papers and

complemented them with six invited submissions from leading researchers, reaching the final count of 21 papers in the program.

Open source provides the competitive advantage in the Internet Age. According to the August Forrester Report, 56 percent of IT managers interviewed at Global 2,500 companies are already using some type of open source software in their infrastructure and another 6 percent will install it in the next two years. This revolutionary model for collaborative software development is being embraced and studied by many of the biggest players in the high-tech industry, from Sun Microsystems to IBM to Intel. *The Cathedral & the Bazaar* is a must for anyone who cares about the future of the computer industry or the dynamics of the information economy. Already, billions of dollars have been made and lost based on the ideas in this book. Its conclusions will be studied, debated, and implemented for years to come. According to Bob Young, "This is Eric Raymond's great contribution to the success of the open source revolution, to the adoption of Linux-based operating systems, and to the success of open source users and the companies that supply them." The interest in open source software development has grown enormously in the past year. This revised and expanded paperback edition includes new material on open source developments in 1999 and 2000. Raymond's clear and effective writing style accurately describing the

benefits of open source software has been key to its success. With major vendors creating acceptance for open source within companies, independent vendors will become the open source story in 2001.

The present book includes a set of selected extended papers from the 5th International Conference on Simulation and Modeling Methodologies, Technologies and Applications (SIMULTECH 2015), held in Colmar, France, from 21 to 23 July 2015. The conference brought together researchers, engineers and practitioners interested in methodologies and applications of modeling and simulation. New and innovative solutions are reported in this book.

SIMULTECH 2015 received 102 submissions, from 36 countries, in all continents. After a double blind paper review performed by the Program Committee, 19% were accepted as full papers and thus selected for oral presentation. Additional papers were accepted as short papers and posters. A further selection was made after the Conference, based also on the assessment of presentation quality and audience interest, so that this book includes the extended and revised versions of the very best papers of SIMULTECH 2015. Commitment to high quality standards is a major concern of SIMULTECH that will be maintained in the next editions, considering not only the stringent paper acceptance ratios but also the quality of the program committee, keynote lectures, participation level and logistics.

The last decade has witnessed a rapid surge of interest in new sensing and monitoring devices for wellbeing and healthcare. One key development in this area is wireless, wearable and implantable in vivo monitoring and intervention. A myriad of platforms are now available from both academic institutions and commercial organisations.
